

memo

Dear Kimberly,

With reference to massive consequences of climate change and its evil effects, we feel the need of taking quick action <sup>in</sup> ~~in~~ <sup>with</sup> regards ~~to~~ to the usage of renewable energy.

Fossil fuel combustion ~~is~~ the pollution of air is getting worst day after day so we recommend to ~~you~~ create awareness about using public transport for transportation, usage of bicycle, etc.

Secondly, the garbage collection in city is not effective. There is need of segregation of wet and dry garbage separately and process the same to avoid unnecessary air pollution.

The street light of city is still working on electricity by coal, which unnecessary burden the carbon emissions. We insist to use solar energy for LED bulbs to ~~to~~ conserve the environment.

Further emphasis should be made to install wind mills on the hill area of city which will help to give the nearby villages to get the electricity at their houses.

Kindly study our recommen-  
as very carefully and have an  
initiative towards the green ~~at~~ environment.

Sincerely,  
Narayan Salunke.
