

To: Steve King:

BP must end the use of coal ~~and~~ within the next few years. 2025 at the very latest. And replacement fuel sources must be limited to clean renewables. There is no time to waste if our grandchildren are going to have a life. Human civilization itself is at stake. It is nothing short of madness to consider replacing dirty coal with dirty (possibly worse) fracked gas or LNG.

Thank you for your attention.

Please do the right thing for humankind.

Sincerely,

Peggy Brubaker
