

Dear Puget Sound Energy CEO Kimberly Harris -

As an attendee of this week's Climate Reality Leadership Training, I was very interested to learn about what steps PSE was taking to ~~be~~ contribute to Washington State's commitment to be 100% renewable energy by 2025. I think the initial steps of retiring two boilers is ~~another~~ a fabulous way to show climate leadership, but I urge you to do more.

I urge you to think about children. The climate crisis is already disrupting everything from our water systems to our food systems - fueling forest fires, damaging shellfish, and causing sea-level rise on our Pacific coast. I want my son and all children of Washington to be able to enjoy all the natural beauty this state offers.

I urge you to think about the community. ~~That~~ To shut down Units 3 and 4 could positively impact not only ~~to~~ PSE customers ~~and~~ but the communities in other states. In addition, ^{this could not benefit} ~~the~~ the Colstrip Community if PSE puts mechanisms in place like training for Colstrip workers.

I urge you to take action. You have the power to be a Climate Reality

Leader, too. Shutting down Units
3 and 4 and committing PSE to
be 100% renewable energy would
send a clear message to other utilities
across the country that PSE is
truly committed to lead on Climate.

Thank you for your
time -

EJ
