

Dear Kimberley Harris,

from Cassel
Keresday
Del Mar, CA.

Four years ago, I took a deep breath, grabbed my husband's hand, and walked with him into a chemotherapy unit. He acted more ~~of~~ brave than me, but I bet he thought I was the brave one. ~~that~~

The unit was huge and bustling ~~with~~ and I was shocked at the ~~large~~ volume of patients receiving chemotherapy for cancer at the ~~time~~ ^{same} time.

At that moment, I knew that the world we live in has been changed for all of us. I think this change in our country's health pattern has changed drastically.

I don't think we did it on purpose. We thought that providing more fossil fuel energy resources ~~to~~ ~~chronic~~ ~~treatments~~ for all, was best for our world.

Now we know differently. Thank you for shutting down the two

I beg of you to look deeply at how PSE can possibly be affecting the health of all citizens of the region.
