

Dear Puget Sound Energy CEO Kimberly Harris,  
As international visitors from New Delhi, India we would like to bring a rather sombre + realistic future of coal plant electricity on the citizens of a city - Delhi's pollution levels are partly ~~cor~~ a reason of the coal based electrical production - it has affected a air quality index (AQI) to hazardous levels which is affecting children's health (asthma) + severe lung + breathing problems for all ages.

We urge you to retire Units 3 + 4 no later than 2025 so that the area can begin to heal itself and commit itself to 100% renewable energy. Please do not commit the mistakes that other cities of the world have already made and are seeing their negative impact now. You can move forward to a better cleaner future by your foresight and attention to this issue.

Please take the sustainable path forward.  
Sincerely,

K. Agrawal.
