

6/28/17

Dear Ms. Harzlis,

I am a current PSE customer.

I recently learned that 30% of PSE energy comes from coal. In an age where renewable energy is becoming more and more cost effective, I feel that the use of coal is entirely unnecessary.

While I appreciate that two of the Colstrip power plants have been retired, I would ask that you close the last two plants and bring PSE into the future of clean, renewable energy.

Sincerely,

Cheryl B. Soeths
