

**EXHIBIT NO. \_\_\_(RG-1HCT)  
DOCKET NO. UE-072300/UG-072301  
2007 PSE GENERAL RATE CASE  
WITNESS: ROGER GARRATT**

**BEFORE THE  
WASHINGTON UTILITIES AND TRANSPORTATION COMMISSION**

**WASHINGTON UTILITIES AND  
TRANSPORTATION COMMISSION,**

**Complainant,**

**v.**

**PUGET SOUND ENERGY, INC.,**

**Respondent.**

**Docket No. UE-072300  
Docket No. UG-072301**

**PREFILED DIRECT TESTIMONY (HIGHLY CONFIDENTIAL) OF  
ROGER GARRATT  
ON BEHALF OF PUGET SOUND ENERGY, INC.**

**REDACTED  
VERSION**

**REVISED DECEMBER 21, 2007**

1 **Q. Did the Company accept PSRC's original offer?**

2 A. No. PSE and PSRC settled on an asset purchase price of \$ [REDACTED] million. *See*  
3 Exhibit No. \_\_\_(RG-30C) at 6.

4 **Q. What is the portfolio benefit associated with the purchase of Whitehorn**  
5 **Generating Station Units 2 and 3?**

6 A. The portfolio benefit associated with the purchase of Whitehorn Generating  
7 Station Units 2 and 3 is \$1.9 million. *See* Exhibit No. \_\_\_(WJE-1HCT) at 22.

8 **VI. REPLACEMENT POWER AND PURCHASE OPTION OF**  
9 **THE SUMAS NATURAL GAS-FIRED COMBINED CYCLE**  
10 **COGENERATION PLANT**

11 A. **Existing Arrangement**

12 **Q. Please describe the events leading up to the default by Sumas Cogeneration**  
13 **Company, LP ("SCCLP") under its power purchase agreement with PSE.**

14 A. In Spring 2006, SCCLP notified PSE that SCCLP would not be able to continue  
15 supplying energy under the long-term firm PPA with PSE because it was  
16 experiencing increasing financial pressures. SCCLP cited a variety of reasons for  
17 these financial pressures, including but not limited to high gas prices, increasing  
18 royalty costs on Canadian gas reserves, and concerns about meeting debt service  
19 coverage. SCCLP proposed the following restructuring of the long term PPA:

- 1 (i) SCCLP would sell its existing gas reserves and make a payment of  
2 not less than [REDACTED] to PSE;
- 3 (ii) SCCLP and PSE would terminate the existing PPA, PSE would  
4 enter into a replacement power purchase agreement, and the parties  
5 would split the savings resulting from such replacement; and
- 6 (iii) SCCLP would sell the cogeneration plant at a discount to PSE for  
7 approximately [REDACTED].

8 After several months of consideration, PSE notified SCCLP that the proposed  
9 restructuring was not compelling given the level of savings and risk to PSE's  
10 customers.

11 On March 14, 2007, PSE met with Commission Staff and presented the  
12 presentation prepared for the EMC meeting the following day to provide an  
13 update on the status of these discussions with SCCLP. Please see Exhibit  
14 No. \_\_\_(RG-32HC) for a copy of the presentation made to Commission Staff  
15 regarding PSE's discussions with SCCLP. PSE staff presented the same analysis  
16 and information with a revised order to the EMC on March 15, 2007, at which  
17 time PSE staff recommended a cessation of further discussions with SCCLP.  
18 Please see Exhibit No. \_\_\_(RG-33HC) for the presentation made to PSE's Energy  
19 Management Committee.

20 **Q. How did the Company learn about SCCLP's default on its long term firm**  
21 **PPA?**

22 A. On May 7, 2007, PSE received a letter from SCCLP, in which SCCLP stated that  
23 it would not make further deliveries of electricity to PSE under the PPA after June  
24 30, 2007. Please see Exhibit No. \_\_\_(RG-34HC) for the letter from SCCLP. The

1 “market makers” and one generator. Please see Exhibit No. \_\_\_(RG-36C) for the  
2 term sheet solicitation. Two of the respondents declined to participate, citing  
3 reasons such as an inability to simulate the plant characteristics, complexity of the  
4 transaction, and other general contract issues, such as credit requirements. PSE  
5 received two responses to its solicitation for replacement power. Of the two  
6 proposals that PSE received, the analysis indicated that the cost to the Company  
7 to replace the contract on such terms and conditions ranged from \$ [REDACTED] million.  
8 Please see the prefiled direct testimony of Mr. W. James Elsea,  
9 Exhibit No. \_\_\_(WJE-1HCT), for a discussion of the projected cost to replace the  
10 SCCLP PPA.

11 **Q. What steps did the Company take next?**

12 A. PSE staff notified the EMC of the results of the solicitation. PSE staff then  
13 proceeded with replacing the energy as prescribed in the replacement power  
14 strategy outlined in the June 11, 2007 EMC meeting. For the long-term  
15 replacement (Step 3), PSE staff developed a second term sheet solicitation for a  
16 standard block product up to 125 MW with a term of January 1, 2009, through  
17 March 31, 2013. Please see Exhibit No. \_\_\_(RG-37C) for the term sheet for the  
18 standard block product solicitation.

19 ////

20 ////

1 **Q. How did the replacement power cost compare with the cost of the remaining**  
2 **value of the SCCLP PPA?**

3 A. PSE was able to replace the power at a cost of approximately \$ [REDACTED]  
4 than the cost of energy under the SCCLP PPA. Although this lower power cost is  
5 beneficial to PSE's customers, this lower price does not address the loss of the  
6 inherent dispatch flexibility of the resource or the displacement optionality of the  
7 resource. Please see the prefiled direct testimony of Mr. W. James Elsea, Exhibit  
8 No. \_\_\_(WJE-1HCT) at 28-29, for a discussion of the calculation of the direct  
9 damages.

10 **Q. Did the Company discuss damages with SCCLP?**

11 A. Yes. PSE met with SCCLP to discuss direct damages on August 8, 2007. At that  
12 meeting, PSE indicated that it may suffer in the range of [REDACTED] million of direct  
13 damages as a result of the SCCLP breach. SCCLP countered that, based on  
14 PSE's solicitation and analysis, PSE suffered negligible damages, if any.

15 After further discussion and negotiation, PSE and SCCLP agreed to pursue a  
16 settlement whereby SCCLP would sell the Sumas Cogeneration Station to PSE at  
17 a significant discount -- approximately [REDACTED] or [REDACTED]. On August 31,  
18 2007, PSE and SCCLP signed a Letter of Intent for the purchase and sale of the  
19 Sumas Cogeneration Station. Please see Exhibit No. \_\_\_(RG-38HC) for the  
20 Letter of Intent between PSE and SCCLP.

1 **C. Acquisition of the Sumas Cogeneration Station**

2 **1. Ownership Arrangement**

3 **Q. Please describe the Sumas Cogeneration Station.**

4 A. The Sumas Cogeneration Station is an approximately 125 MW natural gas-fired  
5 combined cycle generating facility located on an approximately six-acre site  
6 within the City of Sumas, Washington. The Sumas Cogeneration Station was  
7 developed and constructed by a Washington joint venture formed by Industrial  
8 Power Corporation and Haskell Corporation, with HIPP Engineering of  
9 Vancouver, British Columbia serving as project engineer. Sumas Cogeneration  
10 Station was developed on a greenfield site and achieved commercial operation in  
11 April 1993.

12 The plant consists of one combined cycle train. Primary components of the plant  
13 include (i) a GE Frame 7EA model combustion turbine and generator rated at  
14 87 MW, (ii) a Vogt 3-pressure heat recovery steam generator with a total steam  
15 output of 370,000 lbs/hr., and (iii) a GE SC2 steam turbine generator rated at  
16 37 MW. The plant's heat rate is [REDACTED] Btu/kWh and provides heat rate diversity  
17 to PSE's natural gas-fired fleet.

18 The GE 7EA is a mature and proven technology. The GE 7EA model has  
19 accumulated millions of hours of service and is well recognized for its high  
20 reliability and availability. There are more than 750 units in service worldwide.

1 Independent data confirms that average reliability is 99% with an availability of  
2 96%. The availability of parts and service is excellent.

3 The Sumas Cogeneration Station was originally designed for baseload operations,  
4 with the entire electrical output of the plant sold to PSE under a 20-year firm  
5 PPA. The steam host, which is adjacent to the plant, is a lumber drying plant  
6 owned by Socco Forest Products (“Socco”), an affiliate of SCCLP. Exhaust  
7 steam from the plant provides the thermal requirements for the lumber dry kilns.  
8 An exhaust boiler ensures supply of saturated steam during curtailment events.  
9 After acquiring the Sumas Cogeneration Station, PSE will continue to supply  
10 steam to the lumber dry kilns under the terms and conditions of a steam supply  
11 agreement.

12 **Q. Please describe the electric transmission arrangements for the Sumas**  
13 **Cogeneration Station.**

14 A. The Sumas Cogeneration Station is interconnected to PSE’s transmission grid at  
15 the Sumas substation. There are two 115 kV overhead transmission lines that  
16 direct the output of the plant east and west on PSE’s transmission system. The  
17 maximum interconnection capacity is 135MW. As a westside resource, the  
18 Sumas Cogeneration Station provides a reliable source of power for PSE’s  
19 customers, particularly during Puget Sound Area Northern Intertie events, in  
20 which BPA may require PSE to run the Sumas Cogeneration Station to clear

1 congestion in the Puget Sound area. Upon closing, the resource will be  
2 designated as a network resource to serve PSE's network load.

3 **Q. Please describe the gas transportation arrangements for the Sumas**  
4 **Cogeneration Station.**

5 A. The Sumas Cogeneration Station owns a 3.7 mile, 8 inch, natural gas pipeline that  
6 connects the plant with Westcoast's pipeline facilities at the U.S./B.C. border at  
7 Huntingdon, British Columbia. There is a pressure reducing gate station, trip  
8 valve and condensate facility located on the U.S. side that PSE will maintain as  
9 operator of the pipeline.

10 PSE will own the pipeline as a tenant-in-common with Sumas Pipeline Company  
11 and Socco. The capacity of the pipeline is 45,000 Mcf. Of that, PSE's pro rata  
12 share will be 57.3%, or 25,785 Mcf per day, with the remaining capacity to be  
13 allocated between Sumas Pipeline Capacity (41%) and Socco (1.7%).

14 To effectuate the change in ownership of the pipeline, PSE, Socco, Sumas  
15 Pipeline Company, and SCCLP will file a joint application to amend the  
16 Presidential Permit issued to SCCLP in 1991. PSE anticipates that the  
17 amendment application will be filed with FERC in December 2007, and the  
18 parties estimate that such amendment application will take six to nine months to  
19 be approved. In addition to FERC approval, the U.S. Department of State and the  
20 U.S. Department of Defense must approve the application. The transaction  
21 closing is contingent upon approval of the amendment application.

1 **Q. How will the gas pipeline be operated?**

2 A. PSE will operate the natural gas pipeline. Representatives of PSE, Socco, and  
3 Sumas Pipeline Company will establish a management committee to determine  
4 policies and procedures for the operation of the pipeline. The management  
5 committee will have budget authority for operational and maintenance issues.  
6 Each of the parties will contribute based on their pro rata share of the pipeline.

7 **Q. Please describe the fuel supply arrangements for the Sumas Cogeneration**  
8 **Station.**

9 A. Natural gas is the sole fuel supply for the Sumas Cogeneration Station. PSE will  
10 manage fuel supply requirements in a manner consistent with the Company's  
11 hedging strategies. PSE's operations and trading group will monitor and evaluate  
12 the need for additional fuel supplies based on daily updates of its dispatch models.

13 **Q. Please describe PSE's obligations under the steam supply agreement with**  
14 **Socco's lumber dry kiln facilities.**

15 A. PSE will supply steam to the lumber dry kilns when the Sumas Cogeneration  
16 Station is operating at PSE's sole election. PSE has no obligation to supply steam  
17 to Socco when the station is not operating. When PSE does supply steam to  
18 Socco, the dry kiln operation must return condensate to the Sumas Cogeneration  
19 Station. Socco has an auxiliary boiler that supplies adequate steam when the  
20 Sumas Cogeneration Station is not operating. PSE projects that the auxiliary

17  
18  
19

boiler will supply much of the steam demand for the lumber operations post closing because of the expected reduced capacity factor of the plant.

**2. Due Diligence**

**Q. Did PSE evaluate the Sumas Cogeneration Station during the RFP?**

A. Yes. PSE evaluated the Sumas Cogeneration Station during the RFP post-proposal period. In PSE’s updated analysis of the Sumas Cogeneration Station in March 2007, the Company’s analysis indicated a portfolio benefit of \$32 million, a positive benefit ratio of 0.121, and a levelized cost of [REDACTED]/MWh (all based on a capital cost of [REDACTED]). Please see the prefiled direct testimony of Mr. W. James Elsea, Exhibit No. \_\_\_(WJE-1HCT), for a discussion of this analysis.

Further, PSE reviewed comparable asset sales for natural gas-fired generation plants to estimate a reasonable purchase price based on adjustment for plant efficiency, vintage, fixed gas transportation and transmission costs. As compared to the other resource alternatives from the short list of RFP projects, the acquisition of the Sumas Cogeneration Station by PSE is reasonable. See Exhibit No. \_\_\_(WJE-1HCT).

////  
  
////  
  
////

1 **Q. What additional due diligence did PSE conduct with respect to the Sumas**  
2 **Cogeneration Station?**

3 A. The Company conducted a review of legal, commercial, environmental, real  
4 estate, insurance, operations and maintenance, and technical concerns related to  
5 the Sumas Cogeneration Station.

6 **a. Commercial and Legal Due Diligence**

7 **Q. Please describe the commercial and legal due diligence conducted by the**  
8 **Company.**

9 A. The Company and its outside counsel reviewed the various contracts pertaining to  
10 the ownership and operation of the Sumas Cogeneration Station. The Company  
11 focused on potential liabilities and provisions that could affect the acquisition,  
12 such as consents, assignments, and accrued liabilities.

13 **b. Real Estate Due Diligence**

14 **Q. Please describe the real estate due diligence conducted by the Company.**

15 A. Real estate due diligence included title review, boundary and easement survey  
16 review, and review of legal descriptions and survey documentation related to the  
17 fee property acquired and appurtenant and encumbering easements.

18 As discussed above, the Sumas Cogeneration Station is located within the City of  
19 Sumas, Washington. During the due diligence period, SCCLP purchased, in fee,

1 the property upon which the Sumas Cogeneration Station is located. Previously,  
2 SCCLP leased the property from the then-fee owners, the Port of Bellingham.  
3 The Port of Bellingham approved the sale of fee property to SCCLP on November  
4 6, 2007.

5 PSE expects that in December 2007 SCCLP will submit a permit application to  
6 the City of Sumas to amend the previously recorded short plat of the property.  
7 The amended short plat, once approved, will consist of Lots A, B and C. At  
8 closing, PSE will acquire Lot A, the power plant property consisting of  
9 approximately 5.54 acres and Lot C, the affiliated substation lot consisting of  
10 approximately 0.59 acres.

11 **Q. Are there any easements required in order for the facility to operate?**

12 A. The Sumas Cogeneration Station is served by a series of easements. Utility  
13 easements benefiting the plant include a 40 foot wide easement for ingress and  
14 egress to and from the Sumas Cogeneration Station. Additional easements  
15 appurtenant to the plant include those for industrial and potable water, sanitary  
16 sewer, communication lines, electric distribution and transmission lines, and other  
17 related operation infrastructure. Additionally, an easement corridor for natural  
18 gas pipelines begins at the Canadian border and ends at the south border of the  
19 5.54 acre power plant property.

20 ////

c. Environmental Due Diligence

**Q. Please describe the environmental due diligence conducted by the Company.**

A. PSE's environmental due diligence review consisted of site visits, interviews with facility employees, review of all available environmental documentation, including but not limited to review of correspondence with environmental agencies, status of existing environmental permits, Phase I Environmental Site Assessment to support the transfer of ownership and operation of the plant, environmental plans and policies, and regulatory requirements.

**Q. Will the Sumas Cogeneration Station require new air permits?**

A. Yes. The Sumas Cogeneration Station, under PSE's ownership, will require Title IV (Acid Rain) and Title V (Clean Air Act) permits.

**Q. Will these permits require modifications due to the expected lower dispatch rate of the Sumas Cogeneration Station?**

A. No. The Company does not anticipate that either the Title IV (Acid Rain) permit or the Title V (Clean Air Act) permit will trigger stricter emission limits, provided that New Source Review (NSR) is not triggered.

////

////

1 **Q. Please describe the water supply arrangements for the Sumas Cogeneration**  
2 **Station.**

3 A. The Sumas Cogeneration Station receives its water supply from the City of Sumas  
4 pursuant to the 50-year Agreement for Utility Services that expires in 2041. The  
5 City of Sumas also provides for industrial wastewater discharge pursuant to an  
6 Agreement for Waster Water Utility Services between the City of Sumas and  
7 SCCLP. PSE expects SCCLP and the City of Sumas will enter into an Upgrade  
8 and Chemical Treatment Agreement in December 2007, in which SCCLP will  
9 agree to fund construction and operation of an upgrade to the City's treatment  
10 plant. The installation of this chemical injection system will treat the formation  
11 and buildup of bacterial growth before discharge to the City of Abbotsford,  
12 British Columbia, at the site where the City of Abbotsford and Fraser Valley  
13 Regional District of British Columbia treat and dispose of the City of Sumas's  
14 sewage. SCCLP estimates that the installation of the injection equipment will be  
15 completed by December 31, 2007. Additionally, SCCLP, the City of Sumas and  
16 the City of Abbotsford will enter into a Payment and Release Agreement in  
17 December 2007 to ensure full payment to the City of Abbotsford for  
18 extraordinary sewer system cleaning services rendered.

19 At closing, SCCLP will assign the Agreement for Utility Services, Agreement for  
20 Waste Water Utility Services, and the Upgrade and Chemical Treatment  
21 Agreement to PSE. Please see Exhibit No. \_\_\_(RG-39HC) for a copy of the

1 Agreement for Utility Services, Agreement for Waster Water Utility Services, and  
2 the Upgrade and Chemical Treatment Agreement.

3 **Q. What are the ongoing costs for the operation of the wastewater treatment**  
4 **program?**

5 A. The ongoing costs associated with the wastewater discharge system include the  
6 chemical costs, consulting services for periodic monitoring and testing of the  
7 system, and periodic trunk sewer line cleaning by the City of Abbotsford. Please  
8 see Exhibit No. \_\_\_(RG-40HC) for an analysis of these costs.

9 **Q. Please describe the stormwater separation between the power plant and the**  
10 **lumber operations.**

11 A. Currently, the Sumas Cogeneration Station and Socco share a detention pond and  
12 stormwater conveyance pipes. The stormwater system requires separation to meet  
13 current regulatory agency requirements because the lots will be subdivided with  
14 separate owners post-closing. In October 2007, SCCLP requested a proposal  
15 from David Evans and Associates to provide engineering services to design  
16 modifications to the existing stormwater system at the power plant and at the  
17 Socco site in order to separate the two. Modifications at the power plant site  
18 include a V-shaped cutoff drain along the northern property line to prevent runoff  
19 from leaving the site, installation of a new catch basins and underground drain  
20 lines, and an increase in the depth of the existing detention pond. PSE reviewed

1 the David Evans and Associates design with its consultants for constructability  
2 and compliance. SCCLP anticipates that the project will be completed by June  
3 2008.

4 **Q. Please describe other facilities that were required to be separated or**  
5 **relocated by SCCLP?**

6 A. In addition to the separation of the stormwater facilities, SCCLP must relocate the  
7 ammonia tank onto Lot A, in close proximity to the heat recovery steam  
8 generator. SCCLP anticipates that relocation of the ammonia tank will be  
9 complete by the end of calendar year 2007.

10 **d. Insurance Due Diligence**

11 **Q. Please describe the insurance due diligence conducted by the Company.**

12 A. PSE hired Marsh USA Inc. to conduct a property evaluation survey. The property  
13 insurance engineer conducted a site visit on September 12, 2007. The Property  
14 Evaluation Report submitted to PSE indicates that the facility has an excellent  
15 operating history with no property losses. Please see Exhibit No. \_\_\_(RG-41HC)  
16 for a copy of the Property Evaluation Report.

17 The Property Evaluation Report indicates that the Sumas Cogeneration Station is  
18 well separated from the lumberyard operation. Nonetheless, the Property  
19 Evaluation Report suggests the parties take the following three actions:

- 1 (i) construction of a reinforced concrete block wall between the two
- 2 main generation step-up transformers to protect the fire exposure
- 3 created from the adjacent transformers;
- 4 (ii) installation of automatic smoke detection systems in the Mark V
- 5 control equipment room and the electrical breaker room; and
- 6 (iii) construction of a fire resistance rated enclosure around the
- 7 electrical cable trays that contain the generation output cables to
- 8 the step-up transformers.

9 **Q. Were there any other concerns identified?**

10 A. Yes. Later, in the due diligence process, PSE obtained an April 2007 borescope  
11 inspection report from SCCLP that showed cracking on one of the guide vanes of  
12 the first stage nozzles. First stage nozzles are subject to the highest temperatures  
13 in the turbine section, and such conditions can cause cracking. GE had previously  
14 noted this cracking in an April 2006 inspection report. Generally, first stage  
15 nozzles are repaired or replaced at each hot gas path inspection. PSE requested  
16 that SCCLP work with GE to gain a better understanding of the continued safe  
17 operation of the plant until the next scheduled hot gas path inspection. GE  
18 responded with a letter to PSE, which recommended periodic borescope  
19 inspections but no operational curtailments or changes to normal operating  
20 procedures. This response was satisfactory to PSE's insurers.

21 ////

22 ////

23 ////

1                   e.       **O&M Due Diligence**

2       **Q.     Please describe the O&M due diligence conducted by the Company.**

3       A.     The Company and its consultants reviewed the operating reports, maintenance  
4             inspection records, and software used at the plant, and conducted site visits to the  
5             Sumas Cogeneration Station. The plant was determined to be exceptionally clean  
6             and well-maintained at the time of the site visit. The gas turbine enclosure and  
7             exterior buildings were in excellent repair.

8             The Sumas Cogeneration Station has historically run at a high load factor and  
9             with few starts. The plant performance and availability have consistently  
10            exceeded 97%. The Contractual Services Agreement between GE and SCCLP  
11            currently has approximately 14,000 factored fired hours remaining. Based on the  
12            contract provisions, the expiration of the contract is estimated to occur in 2013,  
13            which coincides with the second hot gas path inspection, unless such inspection is  
14            accelerated. A routine combustion inspection is planned at the next 2,000 factor-  
15            fired hours. At such inspection, GE will assess the cracking of the first stage  
16            nozzles to determine whether the hot gas path inspection should be performed  
17            simultaneously with the combustion inspection.

18       **Q.     How does the Company propose to staff the Sumas Cogeneration Station?**

19       A.     SCCLP entered into an Amended and Restated Operations and Maintenance  
20             Agreement with Calpine Operating Services, Inc. ("Calpine") on January 24,

1 1992. That contract originally had an expiration date of December 31, 2007, but  
2 it will be extended until the transaction closes (estimated to be third quarter of  
3 2008).

4 PSE is in the process of developing an Asset Management Plan to transition the  
5 existing Calpine employees, all software and vendor contracts, and all O&M  
6 policies and procedures of the plant. PSE anticipates that many of the Calpine  
7 employees will become PSE employees and expects staffing at the Sumas  
8 Cogeneration Station to remain at approximately 15 employees. PSE expects that  
9 this level of staffing will remain over the life of the plant. PSE plans to staff the  
10 plant in a manner similar to the current design, though the labor force would  
11 become members of IBEW Local 77, pursuant to PSE's human resources labor  
12 relations protocol. PSE plans to operate the project with a Plant Manager, an  
13 Operations Supervisor, and an Assistant Manager.

14 **f. Technical Due Diligence**

15 **Q. Please describe the technical due diligence conducted by the Company.**

16 A. PSE staff engineers conducted the technical due diligence, with some assistance  
17 from North American Energy Services. The Sumas Cogeneration Station is a  
18 conventional one-on-one combined cycle cogeneration power plant. As stated  
19 above, the plant achieved commercial operation in April 1993, is rated nominally  
20 at 125 MW, and is designed for baseload operation.

1 A GE Frame 7EA combustion turbine provides electrical power via a GE  
2 generator and exhaust heat ducted to a Vogt three-pressure heat recovery steam  
3 generator, which is used to generate high, intermediate, and low pressure steam.  
4 Steam generated by the heat recovery steam generator drives a GE SC2 steam  
5 turbine. The plant has redundancy on almost every system and has proven to be  
6 very reliable over time. PSE's technical due diligence team concluded that  
7 SCCLP maintained the plant well and that the plant has an excellent operating  
8 history.

9 **Q. Has PSE and SCCLP finalized contracts for PSE's acquisition of the Sumas**  
10 **Cogeneration Station?**

11 A. No. PSE and SCCLP have finalized all major business terms with respect to  
12 PSE's acquisition of the Sumas Generating Station, and the parties are, as of the  
13 time of this filing, finalizing several definitive agreements, including the  
14 following:

- 15 (i) a Membership Interest Purchase and Sale Agreement by and  
16 between SCCLP and PSE;
- 17 (ii) an Agreement for the Ownership and Operation of Gas Pipeline by  
18 and among PSE, Sumas Pipeline Company, and Socco;
- 19 (iii) a Steam Supply Agreement by and between PSE and Socco; and
- 20 (iv) a Statutory Warranty Deed by and between SCCLP and Sumas  
21 SPE, LLC.

22 After PSE and SCCLP finalize the definitive agreements, PSE will supplement  
23 this testimony to provide copies of such definitive agreements. PSE anticipates

1 that PSE and SCCLP will finalize and enter into the definitive agreements before  
2 the end of calendar year 2007.

3 Consummation of the transaction will be final at the time that all precedent  
4 conditions have been satisfied, FERC has approved transfer of the Station and the  
5 amendment and transfer of the Presidential Permit, and the parties are in receipt  
6 of such approvals.

7 **Q. Does the Company's acquisition of the Sumas Cogeneration Station satisfy**  
8 **the evaluation criteria set out in the RFP?**

9 A. Yes. The Company's acquisition of the Sumas Cogeneration Station satisfies the  
10 evaluation criteria as follows:

- 11 (i) The Sumas Cogeneration Station is compatible with PSE's need.  
12 The Sumas Cogeneration Station provides up to 135 MW of winter  
13 capacity, has significant operational flexibility, and has a  
14 reasonable heat rate among PSE's natural gas fleet.
- 15 (ii) The Sumas Cogeneration Station will minimize PSE's costs. PSE  
16 was able to acquire the Sumas Cogeneration Station at a favorable  
17 price. There are no additional transmission costs as the plant is  
18 located in PSE's service territory and is interconnected to PSE's  
19 115 kV system.
- 20 (iii) The Sumas Cogeneration Station minimizes PSE's risks. By  
21 purchasing an existing facility, the costs are known and  
22 quantifiable. The Sumas Cogeneration Station has proven to be  
23 very reliable over time.
- 24 (iv) The Sumas Cogeneration Station includes public benefits. The  
25 Sumas Cogeneration Station is an efficient gas fired generating  
26 facility with low regulated emissions and CO<sub>2</sub> levels that meet the  
27 performance standards established in SB 6001.

- 1 (v) The Sumas Cogeneration Station met PSE's strategic and financial  
 2 needs. Acquisition of the Sumas Cogeneration Station at a  
 3 discounted price provides for the settlement of damages and all  
 4 other claims arising from SSCLP's default under the PPA.  
 5 Owning a west-side resource in PSE's control area allows PSE the  
 6 flexibility with respect to future dispatch of the plant.

7 **3. Project Acquisition Process**

8 **Q. Please describe the process resulting in PSE's acquisition of the Sumas**  
 9 **Facility.**

10 A. As discussed above, PSE and Sumas entered into a Letter of Intent on August 31,  
 11 2007, for the purchase and sale of the Sumas Cogeneration Station as settlement  
 12 of SCCLP's PPA default. PSE and Sumas established an exclusive due diligence  
 13 period ending November 16, 2007. Concurrent with the due diligence activity,  
 14 PSE and Sumas negotiated in earnest the Membership Interests Purchase and Sale  
 15 Agreement and ancillary agreements. PSE and Sumas expect to successfully  
 16 conclude negotiations and execution of definitive agreements in December 2007

17 **Q. What concessions did PSE secure from SCCLP?**

18 A. Through negotiations, PSE was able to obtain concessions that included a reduced  
 19 purchase price for the spare parts inventory and payment by SCCLP of 100% of  
 20 the real estate excise tax.

21 ////

22 ////

1 **Q. Has FERC approved the disposition of the Sumas Cogeneration Station?**

2 A. No. PSE and SCCLP expect to file a joint application in December 2007 for  
3 FERC approval under Section 203 of the Federal Power Act. PSE anticipates  
4 receipt of FERC's ruling on its Section 203 application within two to three  
5 months after filing.

6 **Q. Have PSE and SCCLP closed the sale of the Sumas Cogeneration Station?**

7 A. No. As discussed above, the parties estimate that the transaction will close in the  
8 third quarter of 2008 after approval and receipt from FERC of the Section 203  
9 approval and the amendment to the Presidential Permit to reflect the change in  
10 ownership of the natural gas pipeline. The Presidential Permit is a long approval  
11 process because it requires approvals from FERC, the U.S. State Department, and  
12 the U.S. Department of Defense.

13 **4. Project Acquisition Costs**

14 **Q. Please describe the acquisition costs for the Sumas Cogeneration Station.**

15 A. The Company's total purchase price for the Sumas Cogeneration Station is  
16 \$ [REDACTED], or approximately \$ [REDACTED] per kW. The "all-in" capital cost of the  
17 acquisition is \$30,439,921, which includes the following additional costs (please  
18 see Exhibit No. \_\_\_(RG-42HC) for additional detail):

19 ////

Sumas Cogeneration Station	Project Costs
Facility Purchase Price	██████████
Spare Parts Inventory	██████████
Facility Improvements	██████████
One Time Permitting Fees	██████████
Transaction & Due Diligence	██████████
Property Taxes	██████████
<b>Total Capital Expense</b>	<b>\$30,125,113</b>

1 **Q. Please describe the line item “Facility Purchase Price.”**

2 A. The “Facility Purchase Price” represents the costs associated with the purchase of  
3 all assets of the Sumas Cogeneration Station.

4 **Q. Please describe the line item “Facility Improvements.”**

5 A. “Facility Improvements” are funds to upgrade the communications and security  
6 systems at the Sumas Cogeneration Station (\$██████████) and to retrofit the  
7 cooling tower exhaust stack to mitigate rust particulate that is emitted during start  
8 up of the plant (\$██████████). PSE anticipates that startups of the plant occur more  
9 frequently because the plant will now be dispatched based on the market signals.  
10 Therefore, retrofit of the cooling tower will include a stack damper, coating the  
11 inside of the stack, and adding a heat exchanger.

12 **Q. Please describe the line item “Transaction & Due Diligence.”**

13 A. “Transaction & Due Diligence” costs are PSE’s internal costs for due diligence  
14 and negotiations, title insurance, third party expert consultants and legal fees

1 associated with the transaction. For example, “Transaction & Due Diligence”  
 2 costs reflect (i) the costs paid by PSE to third parties that assisted in due diligence  
 3 efforts for the Sumas Cogeneration Station, and (ii) fees paid to legal counsel.

4 **Q. Please describe the line item “Property Taxes.”**

5 A. In Washington State, property is assessed at the end of each calendar year with  
 6 taxes paid in April and October of the following year, in arrears. It is customary  
 7 in real estate transactions in Washington for property taxes to be prorated based  
 8 on taxes payable in the year of closing. Consistent with accounting treatment,  
 9 where property taxes are accrued, those taxes paid at closing and those paid up  
 10 until the first anniversary of the closing date are capitalized.

11 **5. O&M Expenses**

12 **Q. What does the Company project its expenses will be for the Sumas**  
 13 **Cogeneration Station during the rate year?**

14 A. The Company projected total O&M expenses of \$ 4,342,942 for the Sumas  
 15 Cogeneration Station.

Sumas Cogeneration Station Expense	Expense
Production O&M	\$3,693,382
Property Tax	\$543,257
Insurance	\$106,303
<b>Total O&amp;M Expense</b>	<b>\$4,342,942</b>

1 Please see Exhibit No. \_\_\_(RG-43HC) for detail regarding the projected total  
2 O&M expenses for the Sumas Cogeneration Station.

3 **VII. EXTENSION OF POINT ROBERTS**  
4 **SUPPLY CONTRACT WITH POWEREX**

5 **Q. Please describe the Point Roberts contract extension with Powerex.**

6 A. Due to the unique geography of Point Roberts, Washington, it is not electrically  
7 connected to PSE's system, and PSE must use Powerex to serve this load in the  
8 absence of a distribution tariff on BC Hydro's system.

9 The contract extension with Powerex to supply the Point Roberts load provides  
10 for another two (2) years of service, commencing October 1, 2007, and ending  
11 September 30, 2009, at a renegotiated price of [REDACTED]. The contract is a full  
12 requirements contract, up to a maximum of 8 MW. Peak capacity is estimated to  
13 be 6 MW with an annual average load of 2.5 aMW.

14 **Q. Has the Company discussed the potential for a distribution tariff with BC**  
15 **Hydro?**

16 A. PSE contacted BC Hydro in June 2007 to discuss the potential for a distribution  
17 tariff. At the time, BC Hydro was in a rate proceeding but indicated interest in  
18 meeting with PSE in the future.
