**FOURTH REVISED SHEET NO. 21.1
CANCELING
THIRD REVISED SHEET NO. 21.1**

RAINIER VIEW WATER COMPANY, INC.

SCHEDULE NO. 1
Residential
Metered Rate Service (Continued)

Conditions:

1. Existing customers may not decrease the size of the meter serving their property unless the Company, in its discretion, agrees such resizing is appropriate. The cost of any replacement meter and its installation shall be paid by the customer. The meter size may be increased if there is substantial new construction to a size determined by the Company to be appropriate for the use of the property. For new customers, the Company will determine the appropriate meter size taking into account the proposed use of the property. (N)
2. A compound meter is a combination of a large meter and a small meter, with a special change-over valve to accurately measure an extremely broad range of flow rates. A compound meter is billed as a single customer; this is done by applying the larger meter size to determine the monthly metered rate service for base rate and usage blocks; the total billed usage amount is determined by combining the usage of both the large and small meters. (N)
3. For customers that also have a Fire Suppression Installation under Schedule 15, the customers will receive a single bill for authorized use under both this Schedule and Schedule 15. Customers who have violated the terms of Schedule 15 such that the service under said Schedule 15 is deemed to have become a domestic service (see, Schedule 15, Condition C.12) will receive two bills, one for each service. (T)

ORIGINAL SHEET NO. 22.1

RAINIER VIEW WATER COMPANY, INC.

(N)

SCHEDULE NO. 1A
Non-Residential
Metered Rate Service (Continued)

Conditions:

1. Existing customers may not decrease the size of the meter serving their property unless the Company, in its discretion, agrees such resizing is appropriate. The cost of any replacement meter and its installation shall be paid by the customer. The meter size may be increased if there is substantial new construction to a size determined by the Company to be appropriate for the use of the property. For new customers, the Company will determine the appropriate meter size taking into account the proposed use of the property.
2. The term "non-residential" includes customers utilizing irrigation meters and any other use that is not residential, domestic service.
3. A compound meter is a combination of a large meter and a small meter, with a special change-over valve to accurately measure an extremely broad range of flow rates. A compound meter is billed as a single customer; this is done by applying the larger meter size to determine the monthly metered rate service for base rate and usage blocks; the total billed usage amount is determined by combining the usage of both the large and small meters.

THIRD REVISED SHEET NO. 49
CANCELING SUBSTITUTE SECOND REVISED SHEET NO. 49

RAINIER VIEW WATER COMPANY, INC.

SCHEDULE 14

IRRIGATION SERVICE

A. Applicable:

To water service through a connection used primarily for irrigation and not for service to provide domestic consumption. This service is applicable to lots that are not buildable or are designated as open space on filed plats or as may be agreed by contract between the Company and customer (or customer's predecessor-in-interest). Incidental use for drinking fountains or other domestic consumption shall not change the primary use for irrigation purposes.

B. Monthly Rate:

Monthly rates are set out on Schedules 1 and 1A.

(T)

C. Conditions:

1. Consumption under this Schedule for each billing period beginning with the period covered by the June bill issued by the Company and ending with the period covered by the October bill issued by the Company ("Restricted Period") is limited to 107 cubic feet (800 gallons) per day measured as a monthly total.* Consumption that exceeds this limit of 107 cubic feet per day in one billing period may, at the discretion of the Company, result in service being restricted or discontinued for the remainder of the Restricted Period. If the computed per day usage is less than the average 107 cubic-feet per day in any one billing cycle, the difference can not be "banked" and used in subsequent billing periods.

*Per day average is computed as billed usage divided by the number of days in that billing cycle.

2. Each customer must install and maintain a rain sensor as part of their irrigation service so that irrigation will not occur when there is rain.
