STANDARD INSPECTION REPORT OF A GAS TRANSMISSION PIPELINE

A completed **Standard Inspection Report** is to be submitted to the Director within 60 days from completion of the inspection. A **Post Inspection Memorandum (PIM)** is to be completed and submitted to the Director within 30 days from the completion of the inspection, or series of inspections, and is to be filed as part of the **Standard Inspection Report**.

Inspection Report		Post Inspection Memorandum	
Inspector/Submit Date: Scott Rukke 4/15/2010	Inspector/Submit Date: Scott Rukke 4/15/2010	Peer Review/Date: Joe Subsits 4/16/2010	Inspector/Submit Date: Scott Rukke 4/15/2010
		Director Approval/Date:	
POST INSPECTION MEMORANDUM (PIM)			
Name of Operator: Williams Gas Pipeline - West		OPID #: 13845	
Name of Unit(s): Spokane North District		Unit #(s): 8375	
Records Location: Spokane, WA			
Unit Type & Commodity: Interstate Natural Gas			
Inspection Type: Standard Natural Gas Transmission		Inspection Date(s): March 18 & 19 and March 25 & 26, 2010	
PHMSA Representative(s): Jerry Kenersen Scott Rukke (WUTC)		AFO Days: 4	

Summary:
 This inspection included a review of the records for Spokane South, Spokane North and the Idaho District at the Spokane District North Office on March 15 to 19, 2010. All records reviewed were in compliance with code requirements. The Williams Operations and Maintenance Manuals were reviewed in the Joint Team Review completed in June 2005. Field inspections of the Spokane North and South Districts were conducted on March 23 - 26, 2010.

Findings: N/A
 No issues noted.

PHMSA Representative(s) ⁽¹⁾ Scott Rukke , Jerry Kenerson		Inspection Date(s) ⁽¹⁾ March 15 -17 and 23 – 24 2010	
Company System Maps (Copies for Region Files):			

Unit Description:
The Spokane District North consists of approximately 55 miles of 20-inch diameter from Mesa to Ritzville and approximately 62 miles of 16-inch diameter pipeline from Ritzville to the Spokane-Mead Meter Station. 14 miles of 30-inch diameter pipeline from Spokane and Mead Meter Station to Starr Road. The maximum allowable operating pressure is 811 psig. A segment of class 3 pipeline is located in North Spokane on the west side of Barns Road. District laterals include Moses Lake, Lewiston, Coeur D' Alene, Othello, Connell, Menan Starch and two interconnects with Gas Transmission Northwest (GTN) at Spokane and Palouse. The only compressor station included in this inspection is the Mesa compressor station.

Portion of Unit Inspected: ⁽¹⁾
From the Mesa Compressor station North to the Mead Meter Station at the Idaho Border North of Spokane. The northern most GTN tie over was inspected and the overpressure relief valve was operated and tested for proper set point and activation. It operated and opened as designed. This relief valve protects Williams from the higher GTN MAOP. CP reads were taken at random locations along the pipeline and all reads were at proper protection levels. Random emergency valves were operated along the pipeline and all operated as required. Road crossings and meter stations were inspected along the pipeline route and were all good. Class 3 areas surrounding Spokane were driven and random CP reads taken.

¹ Information not required if included on page 1.

Abbreviated Procedures

STANDARD INSPECTION REPORT OF A GAS TRANSMISSION PIPELINE

For gas transmission pipeline inspections, the attached evaluation form should be used in conjunction with 49 CFR 191 and 192 during PHMSA inspections. For those operators, procedures do not have to be evaluated for content unless: 1) new or amended regulations have been placed in force after the team inspection, or 2) procedures have changed since the team inspection. Items in the procedures sections of this form identified with "*" reflect applicable and more restrictive new or amended regulations that became effective between 03/23/04 and 03/23/09.

Western Region: Conducted abbreviated procedures inspection on 192 Operations and Maintenance Items that changed since the last inspection. Items that were included in the operator's O & M Manual at the previous inspection (as per date entered below) may be marked with a "1" in the N/C column to reflect the standard "Note 1" in the Comments blocks. Records And Field Item Will Be Inspected As Per A Routine Inspection.

(check one below and enter appropriate date)

Team inspection was performed (Within the past five years.) or,	Date:	2005
Western Region Inspector reviewed the O & M Manual (Since the last yearly review of the manual by the operator.)	Date:

.13(c)	WELDING AND WELD DEFECT REPAIR/REMOVAL PROCEDURES	S	U	N/A	N/C
*	.225 (a) Welding procedures must be qualified under Section 5 of API 1104 (19 th ed.1999, 10/31/01 errata) or Section IX of ASME Boiler and Pressure Code (2004 ed. Including addenda through July 1, 2005) by destructive test. Amdt.192-94 pub. 6/14/04, eff. 7/14/04; Amdt. 192-103 pub 06/09/06, eff. 07/10/06.				1
	Note: Alternate welding procedures criteria are addressed in API 1104 Appendix A, section A.3.				
*	.227 (a) Welders must be qualified by Section 6 of API 1104 (19 th ed.1999, 10/31/01 errata) or Section IX of ASME Boiler and Pressure Code (2004 ed. Including addenda through July 1, 2005) See exception in .227(b). Amdt.192-94 pub. 6/14/04, eff. 7/14/04; Amdt. 192-103 pub 06/09/06, eff. 07/10/06; Amdt. 192-103 corr. Pub 02/01/07 eff. 03/05/07.				1
*	.229(c) (1) May not weld on pipe that operates at $\geq 20\%$ SMYS unless within the preceding 6 calendar months the welder has had one weld tested and found acceptable under the sections 6 or 9 of API Standard 1104 ; may maintain an ongoing qualification status by performing welds tested and found acceptable at least twice per year , not exceeding 7½ months ; may not requalify under an earlier referenced edition. Amdt.192-94 pub. 6/14/04, eff. 7/14/04.				1
*	.241 (a) Visual inspection must be conducted by an individual qualified by appropriate training and experience to ensure: Amdt.192-94 pub. 6/14/04, eff. 7/14/04				1
	(1) Compliance with the welding procedure				1
	(2) Weld is acceptable in accordance with Section 9 of API 1104				1
*	.241 (c) Acceptability based on visual inspection or NDT is determined according to Section 9 of API 1104 . If a girth weld is unacceptable under Section 9 for a reason other than a crack, and if Appendix A to API 1104 applies to the weld, the acceptability of the weld may be further determined under that appendix. Amdt.192-94 pub. 6/14/04, eff. 7/14/04				1
