5. ORDERING OPTIONS FOR SWITCHED ACCESS SERVICE

5.2 ACCESS ORDER (Cont'd)

5.2.2 ACCESS ORDER MODIFICATIONS

The customer may request a modification of its Access Order prior to the service date. The Telephone Company will make every effort to accommodate a requested modification when it is able to do so with the normal work force assigned to complete such an order within normal business hours. If the modification cannot be made with the normal work force during normal business hours, the Telephone Company will notify the customer. If the customer still desires the Access Order modification, the Telephone Company will schedule a new service date. All charges for Access Order modifications will apply on a per occurrence basis.

Any increase in the number of Switched Access Service busy hour minutes of capacity will be treated as a new Access Order (for the increased amount only).

A. Service Date Change Charge

Access Order service dates may be changed, but the new service date may not exceed the original service date by more than 60 calendar days. If the customer requested service date is more than 60 calendar days after the original service date, the order will be cancelled by the Telephone Company and reissued with the appropriate cancellation charges applied. If the Telephone Company determines it can accommodate the customer's request without delaying service dates for orders of other customers, a new service date may be established.

(C)
(C)

If the service date is changed to an earlier date, and the Telephone Company determines additional labor or extraordinary costs are necessary to meet the earlier service date requested by the customer, the customer will be notified by the Telephone Company that Expedited Order Charges as set forth in D., following apply. Such charges will apply in addition to the Service Date Change Charge.

A Service Date Change Charge will apply, on a per order per occurrence basis, for each service date changed. The applicable charge is listed in Sections 16 and 17, following.

5. ORDERING OPTIONS FOR SWITCHED ACCESS SERVICE

5.2 ACCESS ORDER (Cont'd)

5.2.3 CANCELLATION OF AN ACCESS ORDER

A. A customer may cancel an Access Order for the installation of service on any date prior to the service date. The cancellation date is the date the Telephone Company receives written or verbal notice from the customer that the order is to be canceled. The verbal notice must be followed by written confirmation within 10 days. If a customer or a customer's end user is unable to accept Access Service within 30 calendar days after the latest agreed upon service date, the customer has the choice of the following options:

(C)

The Access Order shall be canceled and charges set forth in Sections 16 and 17, following, will apply if the service has not been fully provisioned, or

(C)

The Access Order will be completed and billing for the service will commence if the service has been fully provisioned or the customer has indicated that billing for the service should begin.

(C)

(C)

(D)

(D)

B. When a customer cancels an Access Order for the installation or service, a Cancellation Charge will apply as follows:

1. Installation of Switched Access Service facilities is considered to have started when the Telephone Company incurs any cost in connection therewith or in preparation thereof which would not otherwise have been incurred.
2. Where the customer cancels an Access Order prior to the start of installation of access facilities, no charges shall apply.
3. Where installation of access facilities has been started prior to the cancellation, the charges specified in a. or b., following, whichever is lower, shall apply.
 - a. A charge equal to the costs incurred in such installation, less estimated net salvage. Such charge is determined as detailed in 4., following.
 - b. The charge for the minimum period of Switched Access Service ordered by the customer.
4. Charges applicable as specified in 3.a. preceding include the non-recoverable cost of equipment and material ordered, provided or used, plus the non-recoverable cost of installation and removal including the costs of engineering, labor, supervision, transportation, rights-of-way and other associated costs.

6. SWITCHED ACCESS SERVICE**6.1 GENERAL****6.1.3 RATE CATEGORIES**

- A. Switched Transport
 - 5. Interface Groups (Cont'd)
 - a. Interface Group 1

(T)

Interface Group 1, except as set forth in b., following, provides two-wire voice frequency transmission at the point of termination at the customer's premises. The interface is capable of transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz.

Interface Group 1 is not provided in association with FGC and FGD when the first point of switching is an access tandem. In addition, Interface Group 1 is not provided in association with FGB, FGC or FGD when the first point of switching provides only four-wire terminations.

The transmission path between the point of termination at the customer's premises and the first point of switching may be comprised of any form or configuration of plant capable of and typically used in the telecommunications industry for the transmission of voice and associated telephone signals within the frequency bandwidth of 300 to 3000 Hz.

The interface is provided with loop supervisory signaling. When the interface is associated with FGA, such signaling will be loop start or ground start signaling. When the interface is associated with FGB, FGC or FGD, such signaling, except for two-way calling which is E&M signaling, will be reverse battery signaling.

6. SWITCHED ACCESS SERVICE**6.1 GENERAL****6.1.3 RATE CATEGORIES**

- A. Switched Transport
5. Interface Groups (Cont'd)

b. Interface Group 2

(T)

Interface Group 2 provides four-wire voice frequency transmission at the point of termination at the customer's premises. The interface is capable of transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz.

The transmission path between the point of termination at the customer's premises and the first point of switching may be comprised of any form or configuration of plant capable of and typically used in the telecommunications industry for the transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz.

The interface is provided with loop supervisory signaling. When the interface is associated with FGA, such signaling will be loop start or ground start signaling. When the interface is associated with FGB, FGC or FGD, such signaling, except for two-way calling which is E&M signaling, will be reverse battery signaling.

c. Interface Group 3

(T)

Interface Group 3 provides group level analog transmission at the point of termination at the customer's premises. The interface is capable of transmitting electrical signals between the frequencies of 60 to 108 kHz, with the capability to channelize up to 12 voice frequency transmission paths. Certain frequencies within the bandwidth of the Interface Group are reserved for Telephone Company use, e.g., pilot and carrier group alarm tones. Before the first point of switching, the Telephone Company will provide multiplex equipment to derive 12 transmission paths of frequency bandwidth of approximately 300 to 3000 Hz. The interface is provided with individual transmission path SF supervisory signaling.

6. SWITCHED ACCESS SERVICE

6.1 GENERAL

6.1.3 RATE CATEGORIES

- A. Switched Transport
 - 5. Interface Groups (Cont'd)
 - d. Interface Group 6

(T)

Interface Group 6 provides DS1 level digital transmission at the point of termination at the customer's premises. The interface is capable of transmitting electrical signals at a nominal 1.544 Mbps, with the capability to channelize up to 24 voice frequency transmission paths. Before the first point of switching, when analog switching utilizing analog terminations is provided, the Telephone Company will provide multiplex and channel bank equipment to derive 24 transmission paths of a frequency bandwidth of approximately 300 to 3000 Hz. When digital switching or analog switching with digital carrier terminations is provided, the Telephone Company will provide, at the first point of switching, a DS1 signal in D3/D4 format.

The interface is provided with individual transmission path bit stream supervisory signaling.

- Call Handling and Destination Feature Charge, per query	\$0.000694		

[1] See Sheet 16-1 for applicable exchanges

[2] The End Office Dedicated Trunk Port rate was calculated based upon a 50/50 split between originating and terminating traffic using this flat-rated port. The FCC in their FCC 11-161 ICC Transformation order in section 51.907(d)(1) allowed Price Cap Carriers to use an equal split to divide the charge between originating and terminating elements. When the terminating portion of the rate is reduced and then combined with the originating portion of the rate a single flat rate is generated for billing purposes. The Originating portion of the DS0 is \$1.24 and the originating portion of the DS1 is \$.06.

17.3.3 END OFFICE (Cont'd)

MONTHLY RATE

E. End Office Dedicated Trunk Port,[2]

– Per DS0	\$1.24
– Per DS1, per channel	\$0.06

	<u>RATE</u>	<u>TARIFF REFERENCE</u>	(T)
F. 800 Data Base Access Service Queries Per Query		6.7.1	
Basic	\$0.0035		(T)
Vertical Feature			(T)
- POTS Translation Charge, per call	\$0.003665		
- Call Handling and Destination Feature Charge, per query	\$0.000694		

[1] See Sheet 17-1 for applicable CenturyTel of Cowiche, Inc. exchanges

[2] The End Office Dedicated Trunk Port rate was calculated based upon a 50/50 split between originating and terminating traffic using this flat-rated port. The FCC in their FCC 11-161 ICC Transformation order in section 51.907(d)(1) allowed Price Cap Carriers to use an equal split to divide the charge between originating and terminating elements. When the terminating portion of the rate is reduced and then combined with the originating portion of the rate a single flat rate is generated for billing purposes. The Originating portion of the DS0 is \$1.24 and the originating portion of the DS1 is \$.06.
