1. CSA Request

The project team recommends approving the Lake Hills-Phantom Lake new 115 kV line project business case and funding the Design phase for \$2.12 million dollars (2014: \$1.19M, 2015: \$0.93M) through 5/15/2015. The total cost of ownership is \$8.75 million dollars, of which \$1.92M has been spent through 12/31/2013, and \$6.83M is the cost to complete the project. The primary Integrated Strategic Plan (“ISP”) objectives and strategies affected by this business case are Process and Tools (Strategy - System reliability and integrity), and Customer (Strategy - Recognition PSE role in community).

The project was launched (it is a legacy project) prior to the adoption of the CSA process. Consequently, the project is in mid-phase. This request is to fund the remaining pre-construction activities (finalize engineering design, develop construction drawings for bid package, complete the permit process, re-start the ROW easement acquisition, and order long-lead materials).

The following two tables reflect the estimated project schedule and spend schedule.

High Level Schedule

| Line # | Lifecycle Phase | Start | Finish | 2014 | | | | 2015 | | | | 2016 | | | |
|--------|-------------------------------|------------|------------|------|----|----|----|------|----|----|----|------|----|----|----|

2. Project Summary

The project scope consists of:

- 1) Installing approximately 2.5 miles of new 115 kV transmission line (1272 ACSR conductor, rated at 100°C) along existing public rights-of way between the Lake Hills Substation and the intersection of SE 16th St/148 Ave SE in the City of Bellevue.
- 2) Installing three new 115 kV transmission switches with public rights-of-way for new protection scheme.
- 3) Rebuild the Lake Hills substation to replace worn out/out dated equipment and loop-thru the new transmission line.

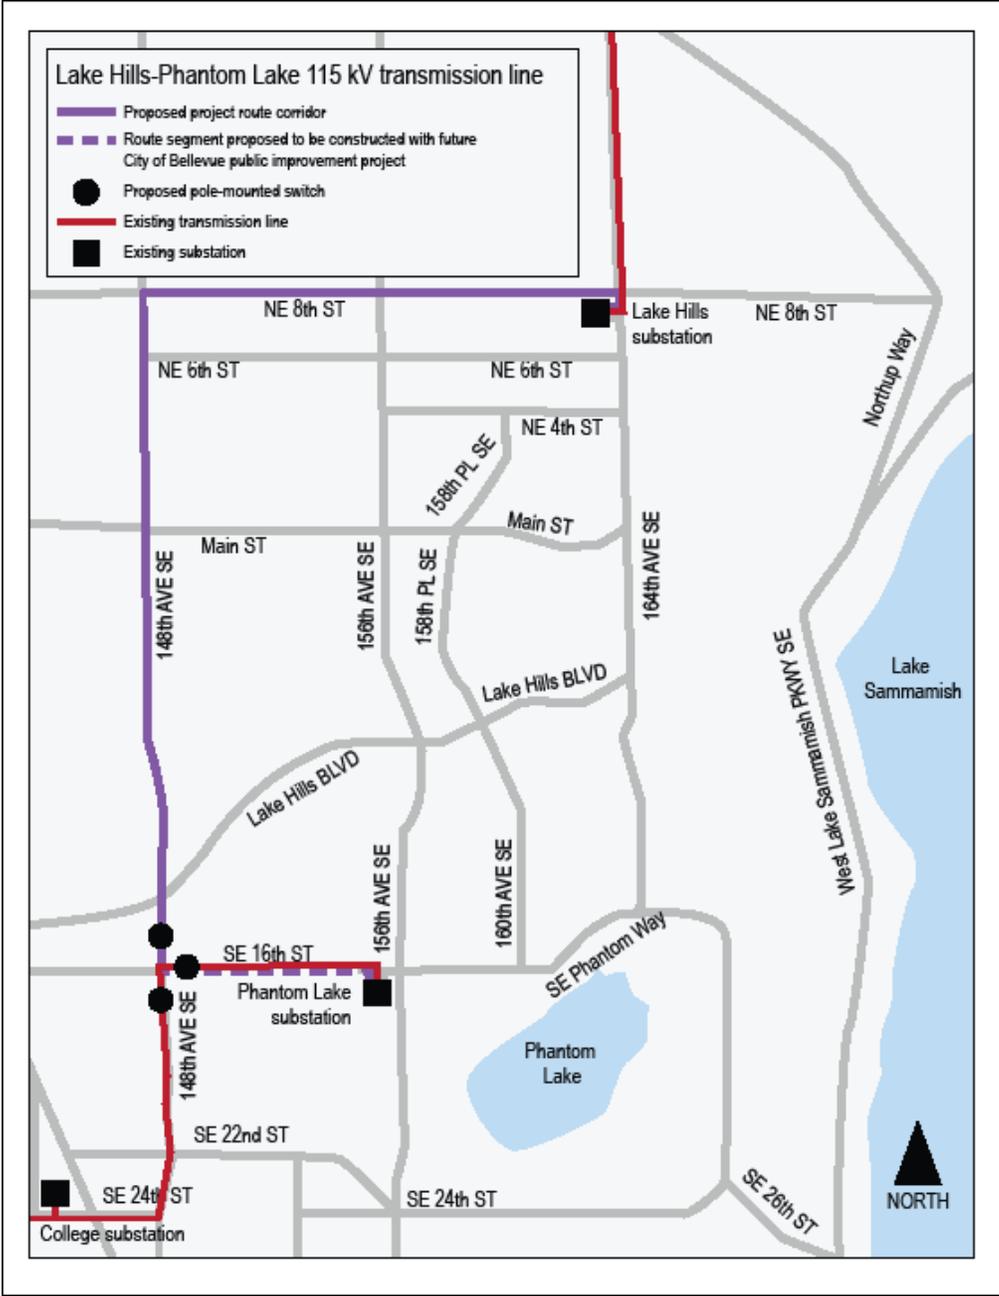

The project needs are:

- 1) Reliability
 - i. Improved reliability to over 30,000 customers served by Lake Hills, Phantom Lake, College, Midlakes, Ardmore, Kenilworth, Evergreen, and Spirit Brook Substations.
 - ii. Will allow PSE to utilize its existing system to greater capacity by looping two substations (Lake Hills and College) which will allow double banking in the future. Also provide an ODL/CHL (Open Dead Line/Closed Hot Line) automatic scheme for Phantom Lake substation; not being looped due to City of Bellevue permit requirements. There is a future COB Public Improvement project on SE 16th St.; an opportunity exists to coordinate our electric system work with COB.
 - iii. Extends PSE fiber network that improves response time and signalization of line equipment, which reduces outages for customers.
 - iv. Provides a third 115 kV feed to Ardmore Switching stations resulting in direct reliability benefits to the East Bellevue and South Redmond service areas.
- 2) Aging Infrastructure
 - i. Replace out dated substation equipment

The current status of the project is:

- 1) PSE has completed a substantial public outreach siting process and has submitted the permit package to the City of Bellevue. The Public hearing and final regulatory approvals are expected in the fourth quarter of 2014.
- 2) Easement acquisition will also recommence in the first quarter 2015 or earlier.
- 3) Construction is scheduled to start and complete in 2015.

Appendix B – Corporate Financial Analysis

The CSA business case funding request for \$6,871,224 includes costs for 2014-2015 and would take the project through construction and closeout in 2015.

This analysis includes total costs of \$8,788,000. This total includes \$1,916,776 of costs incurred prior to 2013, \$6,831,224 of additional capital costs for 2014-2015, and \$40,000 of operation and maintenance (O&M) costs expected to occur in 2015. The project is expected to accrue \$540,958 of Allowance for Funds Used During Construction (AFUDC) over the course of the project. When the project is complete in 2015, approximately \$9.3 million will be closed to plant.

The net present value (NPV) of the total cost of the project is \$6.5 million and the present value (PV) of the cost to the customer is \$9.6 million. For the 2014-2018 period, the sum of projected regulated net income is \$1.2 million and earnings before interest, taxes, depreciation and amortization (EBITDA) is \$3.3 million.

| Assumptions | | | | | | | | |
|--|---------------------|----------------------|----------------------|--------------------|--------------------|--------------------|-----------------------|---------------------|
| | Total Cost | 2014 | 2015 | 2016 | 2017 | 2018 | In 5-yr Budget | |

Board Approved Budget

- The project has been approved as a part of the 2014-2018 5-year plan. The funding in the project costs is consistent with the amount reflected in the 5-year plan.

Financial and Accounting Assumptions

- Capital costs through 2013 (\$1,916,785) include the costs of ideation, feasibility, planning and some design engineering.
- Assumes 50-year depreciation life.
- Assumes AFUDC.

Appendix C – Risks, Key Assumptions and Measures for Success

Risk

| Risk Description <i>(List risks that could significantly impact funding and/or spend schedule)</i> | Mitigation Plan <i>(What are you doing to mitigate the risk? Are risk \$s assigned?)</i> | Risk Date Horizon <i>(Date risk will no longer be a threat)</i> |
|--|---|---|
| <p>1. Permitting</p> <p><i>Impact = H and Probability = L</i></p> | <p>PSE is in discussions with Bellevue City Council and EBCC about the project. Once the City has approved the project through the Conditional Use Permit process, the East Bellevue Community Council could still veto the project. If that should occur PSE’s recourse would be to either cancel the project, find another route or appeal through Superior Court.</p> <p>Costs for planned mitigation have been included in the project’s Cost Report.</p> | <p>December 2014</p> |
| <p>2. Easement acquisition</p> <p><i>Impact = H and Probability = M</i></p> | <p>There are 41 easements to obtain; 21 easements along the NE 8th St and another 20 easements along 148th Ave portion of the route.</p> <ul style="list-style-type: none"> • PSE has a new process easement/condemnation process, implemented on another project (Pierce 230), that will be utilized. • Of those 41 easements, eight belong to government entities; which cannot be condemned. We will utilize the Government & Community Affairs departments to facilitate negotiations. Also begin negotiations in Summer 2014. • There is a high likelihood that some of the remaining 33 acquisitions will need to be acquired through condemnation. We have the option of pursuing a | <p>June 2015</p> |

| Risk Description <i>(List risks that could significantly impact funding and/or spend schedule)</i> | Mitigation Plan <i>(What are you doing to mitigate the risk? Are risk \$s assigned?)</i> | Risk Date Horizon <i>(Date risk will no longer be a threat)</i> |
|--|---|---|
| | <p>“possession & use” agreement while we (PSE & property owner) go through condemnation proceedings. This would allow construction.</p> <ul style="list-style-type: none"> • PSE has held seven public meetings. While there will be some residents opposing the project there doesn’t seem to be momentum to form an organized opposition group. PSE plans to continue to be proactive with the community. <p>Costs for planned mitigation have been included in the project’s Cost Report.</p> | |
| <p>3. Construction</p> <p><i>Impact = M and Probability = M</i></p> | <p>Currently the known permit conditions are standard. However, past experience with City of Bellevue tells us that the permit conditions are fluid. Project team will insist and follow-up on permit conditions before bid package is released.</p> <p>Costs for planned mitigation have been included in the project’s Cost Report.</p> | <p>August 2015</p> |

Risk of Not Doing

- A. The reliability benefits will not be obtained. In the longer term, when the load on the line reaches the capacity limits, the project will be required to increase the system capacity. Extending the time to build the project incurs carrying costs and takes the risk of higher mitigation requirements.
- B. Another risk is that the City of Bellevue considers this project the predecessor to Energize Eastside. “Political will” and/or “Reputational” should be a concern though it is very difficult to quantify.

Key Assumptions

| Assumption Description <i>(List assumptions you have made about your project)</i> | Contributing Organization | Assumption Date Horizon <i>(Date assumption will no longer be a threat)</i> |
|---|---|---|
| <p>1. Permits will be approved</p> | <p>Land Planning</p> | <p>November 2014</p> |
| <p>2. Easements will be obtained</p> | <p>ROW/Real Estate</p> | <p>March 2015</p> |
| <p>3. No unduly restrictive permit conditions</p> | <p>Land Planning, Construction Management</p> | <p>June 2015</p> |

Measures for Success

| Measure for Success <i>(List measures for success)</i> | Measured by? <i>(How do you plan to measure?)</i> | Measure Date Horizon <i>(Date measurement will be available)</i> |
|---|---|--|
| 1. Obtain all easements or “Possession & Use” agreements to proceed to construction | Can I bid the transmission construction? | June 2015 |
| 2. Complete substation construction activities | Test & re-energize substation? | July 2015 |
| 3. Complete transmission construction activities | Can I place line into SVCC status? | November 2015 |

Appendix D - Analysis of Alternatives

| Alternatives Explored | Risks (Cons) | Benefits (Pros) | Total Cost |
|--|--|---|---|
| Current State – also called “Do Nothing” | <ul style="list-style-type: none"> Leaves three distribution substations on radial (tap) lines. Two of them are on the same tap line. At risk are 12,000 customers. Increased OMRC dollars for substation maintenance activities. | <ul style="list-style-type: none"> Capital cost savings. | \$0 |
| Selected: Install new 115 line between Lake Hills and Phantom Lake substations | <ul style="list-style-type: none"> Increases the capital costs | <ul style="list-style-type: none"> Loops three substations (College, Lake Hills, Phantom Lake) Provides third 115 kV feed to Ardmore Switching station Extends PSE network fiber that improves response time | \$8-10 million |
| Alternative #1 is to accelerate the construction of | <ul style="list-style-type: none"> this option would not provide looping (redundant | <ul style="list-style-type: none"> provide a third north/south feed between Lakeside | N/A – rejected, does not meet project needs |

| Alternatives Explored | Risks (Cons) | Benefits (Pros) | Total Cost |
