Dear Commissioners,

I am concerned about climate change and the pollution caused by burning fossil fuels. I am also concerned about the future costs of energy. Fossil fuel infrastructure is a commitment to continue using fuels that are guaranteed to increase in price. Fossil fuel energy is a terrible long term choice. As someone under 30 years old, who intends to continue living in the region for a long time, I will be paying these ever increasing costs of fuel. Renewables don't burn fuels, so they will not see these cost increases. Please ask PSE to close all Colstrip plants by 2020 and replace them with 100% renewable energy.
