[EXTERNAL]

Docket UE-210402 and/or UE-210532

I have attached A screenshot of information directly from pacific power stating there wouldn't be another case filed for rate changes until the year 2023 which would then take effect 2024. Could you please explain how it's possible they are changing the rate now ? Also, what can we do about this, I do not have a disability to inquire about support for impacts with this.

Thank You

allocates costs among energy users

Under the decision, a typical residential customer's electricity bill will decrease a small amount in 2021. An average residential customer using 1,200 kilowatt-hours will see a decrease of \$0.55, for a monthly bill of \$103.81. Rates will differ depending on customer type.

"This was the first general rate case Pacific Power has filed in Washington since 2014," Bird continued. "We are pledging to not file another case until 2023 with new rates not taking effect until 2024. We are delivering this high level of stability by operating prudently and efficiently, but also without compromising on our vision and values. We have managed to keep rates among the lowest in the nation while investing in Washington and our integrated Western energy system to modernize streetlights, repower existing wind power production, acquire new wind and solar generation, modernize and build new transmission to get the power where it needs to go. In addition, we are supporting the ongoing growth and success of a new western energy market that we pioneered to lower customer costs, maximize renewable energy and enhance reliability."

[EXTERNAL]

Please do not raise my already outrageously high power bill. Thanks
