---

**Electricity generated from the burning of fossil fuels is the largest source of green house gas emissions in the United States.**

**If we are going to steady or lower our increased temperatures and resulting fire seasons in our area of Eastern wa, we need Acosta to invest in more wind, solar and other renewable energy resources.**

**Continuing burning fossil fuels will make this place uninhabitable for those of us who suffer from breathing issues, allergies, children and elderly.**

**Do not continue burning fossil fuels to produce our electricity.**

**Hollie Eastmam**
