Watterson Excavation

07/05/2016

Ty Watterson Watterson Excavating 718 Griffin Ave #90 Enumclaw, WA 98022

Date: 07/01/2016

Location: 3525 223rd Ave SE, Sammamish WA

Violation: RCW 19.122.050 (I), Burying a damage facility prior to notification and repair; RCW 19.122.30

(6)(a), Failure to maintain location marks

Ticket #: 16195800

Summary:

On 06/29/2016 our 5/8" PE stub gas facility was damaged a Watterson excavation crew. In violation of RCW 19.122.050 (1) (the "state dig law" is contained in its entirety in RCW 19.122), the gas facility was then taped off and buried prior to notification of the damage and subsequent repair. The damaged facility was reported a day later, a gas first response worker was dispatched, and the damaged facility was found to be still leaking. This caused an unsafe condition for the public, our first responders, and other workers that could have resulted in severe injury or loss of life. Our gas first response worker also observed that the location marks had not been maintained. This is a violation of RCW 19.122.30 (6)(a).

Timeline details:

On 06/01/2016 Scott Sammons received a voicemail from Brad from Watterson Excavating. He had questions about a recent fine their company had received and showed interest in additional training. Erika Hunter, took his contact information and passed it on to Don Evans, executive administrator of Washington 811 so that he could schedule a training for Watterson and its crew to ensure they understood the dig law. Don followed up with Erika on 06/16/2016 to say that he had tried to contact Brad but had not received a response back. Erika again contacted Brad to reiterate the importance of scheduling the training as soon as possible and Brad responded with affirmation that he would. As of 07/01/2016 Don Evans has not received a phone call from Watterson.

On 07/01/2016 the damage was reported at 9:45 am and we responded to the site at 10 am. When our gas worker, Matt Morris, arrived Watterson Excavating had the road graded and were getting ready to pave. The onsite project manager said they were just going to cut out a patch of blacktop where the gas facility was broken so Puget Sound Energy could repair it whenever they showed up. Once Matt saw the locate wire sticking out of the ground where they buried it, it became clear to him that the break had not occurred immediately prior to his arrival. After asking when the damage had occurred he was told that it had occurred "yesterday" by the project manager, Ty Watterson. When he dug up the line it was still leaking and he could hear it hissing. The project manager said that he didn't it was leaking and that he thought it was capped off. The line was approximately two feet deep, buried and compacted in

crushed rock. He repaired the leak. At that time, he also noted on his report that he did not see any marks visible on the ground and that they had not been maintained.

This is the S" time Watterson Excavating has damaged our facilities since OS/28/2015 through careless digging, digging without locates, and now in violation of the two above named RCW sections. According to RCW 19.122.070 (2) "In those cases in which an excavator fails to notify known facility operators of a one-number locator service, any damage to the underground facility is deemed willful and malicious and is subject to treble damages."

Charlie,

Here is the email string and a link to the mobile workforce report. Unfortunately we didn't get a picture because the report says they didn't maintain their mark either.

I agree, and thanks for the heads up. Roger - perhaps you can work your magic with these guys?

Just wanted to give all of you a heads up about a break I had today, Watterson Excavating broke a 5/8" PE stub yesterday, taped it off and backfilled it. They called it in around 9:45 this morning.

When I showed up they had the road all graded and were getting ready to pave, the project manager I talked to onsite said they were just going to cut out a patch of blacktop where it was broken so we could repair it whenever we showed up. Once I saw the locate wire sticking up out of the ground marking where it they buried it, it became very clear that this didn't just happen. I asked how long ago they hit it and with a smirk the project manager told me "yesterday".

2

When I dug it up it was still leaking and I could actually hear it hissing a little bit, he said he didn't think it was leaking and that he thought it was capped *off.* The line was approximately two feet deep, buried and compacted in crushed rock.

Care T

I don't think I have ever recommended triple billing someone before, but if there is ever a case that warrants it, I feel like this is it. These guys did not seem to take this very seriously and this is the kind of behavior that gets people injured or even killed.

Roger,

I left you a voice mail, if you have any other questions or need more info just give me a call. Thanks,

Matt (206) 375-3931
