

VNXX Routing

..... Call is routed over Local Interconnect Service (LIS) trunks in Moses Lake to NTI's POI. Calls are VNXX in nature because NTI does not have an enduser presence in the originating LCA (ISP customer's modem bank/server) and the NPA-NXX numbering scheme does not reflect the actual terminating LCA.

----- NTI Facilities – Calls are routed over NTI's network to the NTI switch in Wenatchee. ISP may or may not be located in the Wenatchee LCA.
