Page 197 MR. DANNER: Okay. Good evening, everybody. 1 This 2 is May 2, 2018, and this is a public hearing of the 3 Washington Utilities and Transportation Commission. 4 I'm Dave Danner, I'm the chair of the commission. T'm joined by my colleagues, Jay Balasbas and Ann Rendahl. 5 6 And we are in Othello, Washington, today for our 7 third public hearing in Docket U-170970, and this is 8 the request by Hydro One and Avista seeking approval of 9 a proposed merger. There is a sheet that has been handed out by our 10 public counsel division, and if you haven't picked that 11 12 up, it basically gives the background on the proposed 13 settlement in this case and so I won't repeat that 14 here. 15 I will say that these public hearings basically 16 are to get the views of customers of Avista and other 17 interested stakeholders. We deal with these merger proceedings and adjudications that are conducted 18 19 pursuant to the State's Administrative Procedures Act. 20 So we have many formal parties to this adjudication, and those include the UTC staff who 21 22 operates a separate party, as well as the company, and 23 the attorney general's public counsel unit which represents the interests of residential and small 24 25 business consumers. We have representatives of both

the company and public counsel in the audience today so 1 2 if anyone has questions for them about this case. We commissioners only hear public testimony. 3 This is an opportunity for us to listen. We are not in a 4 5 position to engage in a dialogue or a back and forth, 6 so if you ask us questions, we will deem them as 7 rhetorical questions and ask you to talk to the company 8 or to commission staff or the public counsel. 9 So with that, we have just one person signed up so far today and it is already about 5:41, so we will see 10 11 if more people come after they get off work and start 12 their evening, but right now I see that David Boleneus 13 has signed in wishing to speak. 14 Do you want to come forward, Mr. Boleneus? 15 MR. BOLENEUS: Yes. 16 MR. DANNER: And just for the benefit of the court 17 reporter, could you spell your last name? MR. BOLENEUS: Yes. B-o-l-e-n-e-u-s, David. 18 19 MR. DANNER: Okay. So go ahead. MR. BOLENEUS: 20 Thank you very much. I'm a wheat grower in Lincoln County. I've watched, studied, 21 22 analyzed this issue since August, just after it was announced, recorded three YouTube videos, published 23 24 four reports, written this commission, presented at two 25 town halls, and will appear or KTW radio tomorrow on

1 the Matt Shea show.

2	My reports are available to anyone. I volunteer
3	to speak, just ask. I report now only a sample of
4	comments that are fully referenced and available to the
5	public mostly out of Ontario.
6	The merger is wrong, dangerous, for reasons beyond
7	the time for me to report. It offers no advantage to
8	the customers, less promise than currently, and Hydro
9	One conveniently avoids any guarantee of future
10	electric supply.
11	I will address the nightmarish electric situation
12	in Ontario, far-away home of Hydro One with Hydro One
13	responsible for some of these nightmarish-like
14	experiences. Then I will tell you why electricity
15	experiences currently terrorizing Ontario are coming to
16	Avista territory despite apparent stipulations
17	otherwise made by this commission with special interest
18	groups from the state that do not represent Avista
19	customers.
20	Before 2009, Ontario rates were like Avista's,
21	three and a half cents per kilowatt hour. Today no one
22	can discover their rates as I worked with electric
23	rates for many years like are available in the U.S.,
24	hidden. In 2009, Ontario's parliament and McGinty's
25	liberal government, home of Hydro One, passed the Green
1	

Energy Act to require wind and end coal. Why? Because they were terrified of carbon dioxide. Mind you, that's the stuff you exhale as I speak and makes plants grow to feed us, is 98 percent natural, not human sourced.

Ontario then built thousands of 400-foot tall 6 bird-chopping wind turbines, five times more than in 7 8 Washington, closed coal electric plants, the most reliable and efficient in North America. It guaranteed 9 renewable wind and solar providers 400 percent to 10 11 1,000 percent higher feed-in tariffs than available 12 procurable market-priced electricity supply, placed no 13 limits on renewables, even paid renewables when they 14 didn't produce, required because this electricity is so exceedingly expensive and inefficient. 15

16 Immediately, Ontario's electric rates skyrocketed 17 to the highest in North America, homing in on Germany's and Denmark's, the world's most expensive at 43 to 44 18 19 cents per kilowatt hour. Hydro One's low-density urban rate rocketed to 29.9 cents in 2015 with optic rates 20 increasing 149 percent in nine years. Then electric 21 22 rates added 18 percent to 36 cents in 2016 or 507 percent higher than Avista's 7.1 cent large general 23 24 service rate.

25

MR. DANNER: Mr. Boleneus, can I ask you to slow

down just a little bit for the court reporter, for her
 benefit and for mine.

3 MR. BOLENEUS: Okay. If I could get through the4 whole script that I have here, I would appreciate that.

5 MS. RENDAHL: You need to slow down so she can 6 type it, we're recording it, and when you're talking 7 that fast she can't type that fast.

8 MR. BOLENEUS: Okay. So I'll back up. Rocketed 9 to 29.9 cents per kilowatt hour in 2015 with optic rates increasing 149 percent in nine years. 10 Then 11 electric rates added 18 percent to 36 cents in 2016 or 12 507 percent higher than Avista's 7.1 cent large general 13 service rate and 1,500 percent higher than Grant and 14 Douglas County PUDs 2.4 cent rate.

15 Ontarians were in a panic, living on the edge, and 16 here are some experiences: Joanna's electric in 17 Timmons, Ontario, was \$800 per month for a family house trailer. Another man said his electricity was \$880 per 18 19 month for heating only three rooms: Kitchen, bathroom, 20 one bedroom. Mayor Lynn Watson said their Dinelles grocery in Echo Bay, Ontario, had to close all its 21 22 froze food, refrigerated foods, and reduce its store by 23 two-thirds because it couldn't afford electricity for 24 compressors and chillers.

25

Seniors in their 80s on fixed incomes, Dorthy and

Ken Wynne in Moosonee, Ontario, had to count out
 pennies to pay electric, cut down on fruits,
 vegetables, even not eating, cooking on a barbecue in
 order to pay electric bills.

Ms. Dobbyn, the United Way executive director in 5 6 Bruce Grey, Ontario, said Wynne's and other's stories 7 really fit the definition of energy poverty. People are told it's their fault, they left a light on. 8 9 Dobbyn said the largest Hydro bill she dealt with was \$22,000, while others had to walk away from their 10 11 mortgage, give up homes because electric was so high, 12 more than their mortgage, and running backyard 13 Finding wood for heat in Ontario's winter. generators. 14 For others, electric requires -- electric requires one-15 half of a month's take-home pay.

16 Their Smart meter program, the way to control and 17 limit electric use, already cost \$2 billion in Ontario was still not working as promised and most benefits 18 19 were not realized. The Toronto Sun reports in the 20 period of 2013 to 2017 disconnected homes grew 19 percent to 58,286, the number of electric accounts 21 22 in arrears, on the verge of disconnect grew 28 percent 23 to 392,963. And while arrears debt grew a staggering 24 40 percent to nearly \$135 million.

25

The Nippissing, Ontario, Conservative Member of

BUELL REALTIME REPORTING, LLC SEATTLE 206.287.9066 OLYMPIA 360.534.9066 SPOKANE 509.624.3261 NATIONAL 800.846.6989

Parliament Vic Fedeli said families are in his office daily looking for help to deal with their Hydro bills, absolutely having to decide whether to feed the kids or run the heater. Understand that these people suffer in silence, unable to communicate without cell phones, internet, TVs, maybe refrigeration, lights, without electricity, vehicles, perhaps even gasoline.

So here's the promise, that these practices are 8 9 coming to Avista territory. Diaene Vernile, member of provincial providence in Kitchener, Ontario, says this 10 on YouTube, quoting Ms. Vernile, "To build Ontario's 11 12 infrastructure, Ontario will sell off 60 percent of Hydro One in an IPO but maintain control, control Hydro 13 One's board, appoint its director, maintain veto power, 14 nominating authority to its subsidiaries, maintain 15 16 regulatory control, and set rates." Will Ontario set Avista's rates? She says so. 17

The 36 cent electric charges were only one problem 18 19 but larger was the extra fee due even before turning on 20 the lights. This is called the Global Adjustment Charge in Ontario. It triples electric bills. It's a 21 22 Hydro One fee for Ontario's sweetheart deals made to pay renewable providers and even paying generators full 23 24 time when the wind's not blowing or sun is not shining, 25 while gifting electricity to Quebec, Manitoba, paid by

1 Ontarians.

In 2016, Ontarians had already overpaid for electricity by \$37 billion, said the auditor general, with future overpayments on 133 billion more coming in the next 13 years.

6 How about Hydro One's record? Its outages last 7 30 percent longer and are 24 percent more frequent, it 8 charges ratepayers more money for systems in decline, the least reliable in Canada, but that's their main 9 business. It's inefficient, lacks incentive to produce 10 or to become productive, builds cost overruns into its 11 12 budget, and games the Ontario Energy Board to get more 13 money claiming its assets in poor condition. The 14 Fraser Institute says it's wasted \$2.25 billion on 15 conservation efforts. Hydro One promised yet another 16 \$285 rate increase before 2019.

17 Then, 40 miles east of Detroit in Chatham Kent, Southwest Ontario, installing foundations for wind 18 19 turbines have destroyed local underground water 20 supplies, the water is brown. It's a black plaque as farmer Marc Saint Pierre displays the black toxic 21 sludge on YouTube that affects his wife's health and is 22 23 only useful for bathing and toilets and that started as 24 pile driving continued to work on the foundations. 25 There's no way it's safe to drink.

Then Ontario's Energy Ministry committed another 1 really stupid act. They would rebate 9 cents to reduce 2 3 electric to 27 cents for ten years, calling this the 4 Fair Hydro Plan. Well, Toronto's Consumer Policy Institute calls it a mirage plan and it misleads 5 customers as the Financial Accountability Office 6 7 reports, rebates now cost \$18.4 billion borrowed to 8 2028, costing 21 billion in interest which could jump to 30 billion if interest costs do not rise more than 1 9 10 percent.

The 18.4 billion rebate and the 30 billion 11 12 interest could cost 48 billion in future customers -to future customers, excuse me, with nothing gained 13 14 while this political stunt gambles customers' 15 electricity future. The Ministry promises you will pay 16 14 cents more added to 50 cents per kilowatt hour 17 rather than 36 had there been no rebate. And the Fair Hydro mirage does nothing to address the lucrative 18 19 contracts made with generators which is at the root of 20 the problem.

21 Reported so far is Green Energy Act, Round 1. 22 It's only began. Green Energy Act, Round 2, so it was 23 called by the locals after they realized what was 24 coming to them, began in 2017 promising more costs, 25 more deprivation to the already impossible burden. It

certainly promises widespread death to the 13.6 billion
 residents of Ontario and this is not the end.

Hydro One wants Avista and its 13 hydroelectric 3 plants. Why? Ontario requires green energy, clean, 4 renewable, whatever that is. Ontario mandates its 5 6 greenhouse gas emissions fall by 80 percent below 1990 7 levels by 2050, adding another \$3,247 per month to each 8 household. It's their Climate Change Action Plan. The 9 Avista acquisition assures Hydro One can meet the 2020 checkpoint while Hydro One avoids paying \$8 billion to 10 11 buy Carbon Credits to Al Gore's Chicago Climate 12 Exchange, Jerry's exchange there in California, saving them \$1.3 billion and it also gains control over 13 14 Avista's 13 hydroelectric assets. How smart? But 15 pretty dumb of us.

16 It's only one part of the Climate Change Action 17 Plan which amounts not to merger or an acquisition 18 action but an Ontario-orchestrated raid on U.S. 19 utilities. You see, storming Avista is only a small 20 peg in Ontario's cross-border foray. The semantics 21 important here.

In the last two years, Ontario raiders have gained
control of \$80.8 billion worth of U.S. clean assets.
Forbes.com lists ten other U.S. companies to future
target, for instance, MDU Resources in North Dakota,

Montana, South Dakota, and Idaho Power in Idaho. Once
 anchored, Hydro One will swoop up more, perhaps Inland
 Power, Kootenai Electric, Northern Lights, Seattle City
 Light, Chelan and Douglas County PUDs.

5 Even the Bank of Montreal and Crysler's CEO warned 6 of serious harm coming to Ontario's economy with jobs 7 disappearing and 1 in 20 businesses closing. At this 8 point, demonstrations against the high electric cost 9 were happening all across Ontario according to 10 Ontario-Wind-Resistance and stopthesethings.com.

Now, I have several other pieces which are human interest stories about the high cost of electricity and how it affects individuals. They're very personal but they were recorded on YouTube. Do I have permission to go through these? Perhaps you don't want all of them so one, maybe two would give you a flavor but I have about five.

MR. DANNER: So what I would suggest, if they are either written materials or they reference videos that we can -- we can make those part of the record in the case by reference. I will allow you to go ahead with one of them, whatever one you think is most illustrative, but the others we will make part of the record if you give them to Mr. Roberts.

MR. BOLENEUS: I'll just do this one that's in

25

front of me, it's from Bancroft, Ontario, it's listed on YouTube, and it's entitled "Increasing hydro prices are devastating rural Ontario." And I think it was published in like a three-minute YouTube from the channel 5, I really don't know the name of the station. Apparently it's from or near Ontario.

7 So it starts out the commentator says, 8 "Electricity prices according to Statistics Canada in 9 Ontario jumped 16 percent in the last year," that is to 10 August 2016. "Residents in rural Ontario are being 11 hardest hit by increasing cost of electricity." And 12 "Residents in Bancroft have reached a breaking point 13 with soaring Hydro (electricity) costs."

14 First comes one resident Jessup in Bancroft, he says, "We have to decide between heating the house and 15 feeding the kids." Hydro prices -- and that Hydro they 16 17 speak of is their electricity bill even though they speak of it as Hydro. "Hydro bills were nearly \$600 a 18 19 month and a father of two couldn't keep up. Hydro One installed a load limiter with a Smart meter. Jessup 20 said it only made matters worse. He could not run the 21 22 microwave oven now. I'd rather feed my kids than 23 anything, but in the end I'm behind in my Hydro bill. 24 It's a never ending battle."

25

And then the Bancroft Councillor Bill Kilpatrick

says, "Bancroft has been hardest hit by the cost of 1 2 electricity. When you need to choose between basic 3 necessities, that's a crisis. We are in a crisis. 4 Half of the cost of bills are delivery costs." And that's the global adjustment fee I speak of and that 5 6 global adjustment fee can be 70 percent of the bill, 7 that is what's added onto the actual cost of the 8 electric use. The costs are at least several hundred 9 dollars during summer and double that amount during the 10 winter. That's more than a mortgage payment.

And then speaking is social worker, Marcia Deportier, electric costs forced her to sell her house and downsize. The level billing was \$798 per month but still at the end I still owed \$798 more. "Over one half of my paycheck is going to hydro costs. Thank you Premier Wynne. Thank you Hydro One. I'm broke."

And then finally, Bancroft resident Ian Seaborn speaking says, "I was disconnected. With my family help, I was able to get a generator to heat my house." Even in budget billing and ditching TVs and computers he couldn't keep up. Right now we are thinking about moving in with parents so we can afford to live. Thank you.

24 MR. DANNER: Okay. And again, anything that you 25 have, written materials or references to YouTube with

citations to those YouTube videos, we can make those
 part of the records in the case. If you give those to
 Mr. Roberts, then that would be --

4 MR. BOLENEUS: I have more than I can send. But I 5 do have some questions, if I could ask them perhaps you 6 can answer me.

7 MR. DANNER: Well, okay. So what I would 8 recommend is Corey, do you want to raise your hand 9 there, this gentleman represents the Attorney General's 10 Public Counsel Office, so in our proceedings he 11 represents the residential and small business consumers 12 so he should be able to take your questions and get a 13 response to them.

MR. BOLENEUS: Okay. Okay. Yeah, we talked a bit outside and I got some idea of the procedure. It sounds like it's still coming. And one question was, you know, what is the last date to submit anything?

18MR. DANNER: Oh, okay. That's a question for us.19MR. BOLENEUS: You can answer that?

20 MR. DANNER: We will take that question. I don't 21 know if we've decided on the last date. Our hearing 22 dates are -- I think that's a week from the evidentiary 23 which is the 23rd of May.

24 MS. RENDAHL: So that would be the 30th of May 25 would be a week after.

1 MR. DANNER: May 30th. 2 MR. BOLENEUS: Okay. Can I ask the other 3 questions and you can tell me whether --4 MR. DANNER: You can ask. I'm not sure if we'll 5 answer them. 6 MR. BOLENEUS: So who represents the customers? 7 MR. DANNER: Well, again, the customers are 8 represented by the public counsel. The industrial 9 customers, there's a group called the Industrial Customers of Northwest Utilities who are participating 10 11 in this group. There's also another group called 12 Northwest Industrial Gas Users who represent the gas 13 customers of -- the industrial gas customers. 14 So there's different rate classes that -- again, 15 the residential and small business are represented by 16 the public counsel and the industrial and large 17 commercial are represented by the industrial groups, ICNU and NIGU. 18 19 MR. BOLENEUS: So you will make a decision by 30 20 May, is that --

21 MR. DANNER: No. No. No. 30 May is the last day 22 for us to accept written comments. We will have an 23 evidentiary hearing on the 23rd of May and then we will take the matter under advisement and we will issue a 24 25 decision in due course and so I can't promise you an

BUELL REALTIME REPORTING, LLC

Page 211

1 end date.

2 MR. BOLENEUS: So you wouldn't promise a date? 3 MR. DANNER: No. We have a lot to go through in 4 this proceeding.

5 MR. BOLENEUS: There's other items I've submitted, 6 and I can't possibly go over that here because I give 7 presentations on these topics often, but my question is 8 do you understand the three factors that drive Hydro 9 One to our door?

10 MR. DANNER: Okay. So that is a question that we 11 will not entertain here as part of this decision, 12 because that gets us into a discourse that I don't 13 think is appropriate for this kind of proceeding, but 14 those are questions that you can certainly bring to 15 Corey or to any company representatives.

MR. BOLENEUS: Yeah, I wasn't even going to disclose what they are, thinking that you must already know. Okay. Thank you.

19

MR. DANNER: Thank you very much.

All right. So it is 6:02 and we noticed this public hearing to begin at 5. So far Mr. Boleneus is the only person who's signed up to testify, you know, we've had scores of people show up at our other meetings so I'm -- I don't know if I should say I'm surprised by the low turnout or I didn't know what to

	Page 213
1	expect in terms of turnout tonight, but it looks like
2	that completes our public testimony for this meeting in
3	Othello.
4	So unless there's anything else to come before the
5	commission this evening on this matter, I'm prepared to
6	adjourn with your consent.
7	All right. In that case, we are adjourned. Thank
8	you very much.
