

**BEFORE THE WASHINGTON STATE  
UTILITIES AND TRANSPORTATION COMMISSION**

WASHINGTON UTILITIES AND  
TRANSPORTATION COMMISSION,

Complainant,

vs.

PUGET SOUND ENERGY, INC.,

Respondent.

**DOCKET NO. UG-040640**  
**DOCKET NO. UE-040641**  
*(consolidated)*

---

In the Matter of the Petition of

PUGET SOUND ENERGY, INC.

For an Order Regarding the Accounting  
Treatment for Certain Costs of the  
Company's Power Cost Only Rate Filing.

**DOCKET NO. UE-031471**  
*(consolidated)*

---

In the Matter of the Petition of

PUGET SOUND ENERGY, INC.

For an Accounting Order Authorizing  
Deferral and Recovery of the Investment  
and Costs Related to the White River  
Hydroelectric Project.

**DOCKET NO. UE-032043**  
*(consolidated)*

**CROSS ANSWERING TESTIMONY OF  
DONALD W. SCHOENBECK  
ON BEHALF OF  
THE INDUSTRIAL CUSTOMERS OF NORTHWEST UTILITIES**

**November 3, 2004**

1 **I. INTRODUCTION AND SUMMARY**

2 **Q. PLEASE STATE YOUR NAME.**

3 **A.** My name is Donald W. Schoenbeck. I am a member of Regulatory &  
4 Cogeneration Services, Inc., a utility rate and economic consulting firm. I am the  
5 same Donald Schoenbeck who sponsored direct testimony in this proceeding on  
6 behalf of the Industrial Customers of Northwest Utilities (“ICNU”).

7 **Q. WHAT IS THE PURPOSE OF YOUR CROSS ANSWERING**  
8 **TESTIMONY?**

9 **A.** The purpose of my cross answering testimony is to respond to arguments offered  
10 by the Staff and Public Counsel regarding: 1) electric rate spread; 2) hydro  
11 normalization; and 3) the appropriate gas price forecast.

12 **II. ELECTRIC RATE SPREAD**

13 **Q. ARE THERE ANY ISSUES IN THE ELECTRIC RATE SPREAD**  
14 **TESTIMONY OF PUBLIC COUNSEL WITNESS JIM LAZAR THAT**  
15 **YOU WOULD LIKE TO ADDRESS?**

16 **A.** Yes. Mr. Lazar suggests that retail wheeling customers who take service on  
17 Schedule 449 are within a reasonable parity ratio, based on a flawed hypothetical  
18 adjustment to administrative and general (“A&G”) costs. The Commission  
19 should reject Mr. Lazar’s approach and approve a rate spread that recognizes that  
20 the rates of retail wheeling customers are greater than their cost of service.

21 **Q. CAN YOU PLEASE EXPLAIN MR. LAZAR’S RECOMMENDATION?**

22 **A.** Mr. Lazar acknowledges that retail wheeling customers have a parity ratio of  
23 120% under the Commission Basis Cost of Service Study.<sup>1/</sup> This ratio is outside

---

<sup>1/</sup> Exh. No. \_\_ (CEP-9) at 2; Exh. No. \_\_ (JL-1T) at 20-21.

1 his “range of reasonableness” of a 90% to 110% parity ratio.<sup>2/</sup> However, Mr.  
2 Lazar proposes to alter the Commission Basis Cost of Service Study to include  
3 A&G costs that he believes should be directly allocated to retail wheeling  
4 customers. According to Mr. Lazar, directly allocating these A&G costs to retail  
5 wheeling customers would result in a retail wheeling parity ratio of 96%, which  
6 falls within Mr. Lazar’s range of reasonableness.<sup>3/</sup> From this “revised” number,  
7 Mr. Lazar concludes that the proposed increase in revenue requirement should be  
8 spread over all customer classes on a uniform percentage basis, because they are  
9 all close to parity.<sup>4/</sup>

10 In Puget Sound Energy’s (“PSE”) cost of service study, the total revenue  
11 requirement for the retail wheeling class, before Mr. Lazar’s adjustment, is  
12 approximately \$7 million, which includes approximately \$0.8 million of A&G  
13 costs that are allocated to retail wheeling customers.<sup>5/</sup> Mr. Lazar’s A&G  
14 adjustment would nearly triple the amount of A&G costs allocated to Schedule  
15 449 by adding an additional \$3 million to the Schedule 449 class revenue  
16 requirement, resulting in a total of \$3.8 million in A&G costs being allocated to  
17 the retail wheeling customers.<sup>6/</sup> As a result, the total revenue requirement for  
18 retail wheeling customers would increase by 39% to approximately \$10 million.

19 Mr. Lazar supports his proposal by comparing it to the modifications to  
20 gas cost of service studies that were adopted when gas transportation services

<sup>2/</sup> Exh. No. \_\_ (JL-1T) at 20-21.  
<sup>3/</sup> Id. at 21.  
<sup>4/</sup> Id. at 25.  
<sup>5/</sup> Exh. No. \_\_ (JL-5) at 1-2.  
<sup>6/</sup> Id.

1 were introduced.<sup>7/</sup> According to Mr. Lazar, these modifications allocated a  
2 portion of the A&G expenses on the basis of throughput, and a portion based on a  
3 subtotal of other operation and maintenance costs.<sup>8/</sup> Finally, Mr. Lazar claims  
4 that his proposal to assign additional A&G expenses to Schedule 449 customers is  
5 justified because he believes significant management attention is given to large  
6 customers and this cost is not recovered through transmission and distribution  
7 rates.<sup>9/</sup>

8 **Q. HOW IS MR. LAZAR'S ANALYSIS FLAWED?**

9 **A.** Mr. Lazar's A&G adjustment is unreasonable because it is inconsistent with how  
10 PSE operates its system. Mr. Lazar inappropriately and without any cost support  
11 seeks to assign a higher percentage of A&G expense to Schedule 449 customers  
12 simply for the purpose of shifting costs to those customers. Mr. Lazar provides  
13 no support for his unsubstantiated claim that PSE is allocating additional  
14 management attention to serve its retail wheeling customers. In fact, since  
15 Schedule 449 was implemented, PSE has derived a dramatically smaller revenue  
16 requirement from its larger customers, which suggests that PSE has likely reduced  
17 the management attention given to large customers. Finally, Mr. Lazar provides  
18 no empirical evidence comparing the A&G costs of retail wheeling customers  
19 with other customer classes.

20 In addition, regardless of whether retail wheeling is analogous to gas  
21 transportation, the results of Mr. Lazar's recommendation must be reasonable  
22 before the Commission should apply the same cost allocation principles. For

---

<sup>7/</sup> Exh. No. \_\_ (JL-1T) at 22.

<sup>8/</sup> Id.

<sup>9/</sup> Id.

1 retail wheeling or Schedule 449 customers, Mr. Lazar’s proposal would result in  
2 A&G costs comprising 37% of the class revenue requirement, when total A&G  
3 costs comprise only about 10% of PSE’s non-production costs.<sup>10/</sup> A methodology  
4 that results in A&G costs comprising almost 40% of the class revenue  
5 requirement, when A&G costs are a much smaller portion of the overall revenue  
6 requirement, is unreasonable.

7 **Q. DO YOU AGREE WITH STAFF WITNESS JOELLE STEWARD’S RATE**  
8 **SPREAD RECOMMENDATION?**<sup>11/</sup>

9 **A.** No. As I noted in my direct testimony, PSE’s new cost model implements a  
10 greater degree of direct assignment of costs instead of using general allocation  
11 factors.<sup>12/</sup> As a result, PSE’s model provides a more accurate assignment of costs  
12 than previous models.

13 **Q. DOES MS. STEWARD OPPOSE PSE’S NEW COST OF SERVICE**  
14 **MODEL?**

15 **A.** Yes. Ms. Steward appears to take exception to the model on the basis that it shifts  
16 costs between customer classes.<sup>13/</sup> However, Ms. Steward recognizes that the  
17 greater accuracy of cost assignment that the PSE model provides “may justify  
18 reevaluation of some of the previously accepted methodologies.”<sup>14/</sup>

19 **Q. DO YOU AGREE WITH MS. STEWARD’S PROPOSAL REGARDING**  
20 **COST ALLOCATION?**

21 **A.** No. The Commission should adopt the cost of service allocation proposed by the  
22 Company, subject to the two modifications proposed in my direct testimony.  
23 ICNU’s proposed revenue to cost ratios are set out in the table on page 36 of my

<sup>11/</sup> Exh. No. \_\_ (JRS-1T) at 17-20.

<sup>12/</sup> Exh. No. \_\_ (DWS- 1HCT) at 32.

<sup>13/</sup> Exh. No. \_\_ (JRS-1T) at 17.

<sup>14/</sup> Id. at 12.

1 direct testimony.<sup>15/</sup> This proposal is an improvement over previous  
2 methodologies because it more accurately assigns costs on a cost causation basis.

3 **Q. WHAT DO YOU RECOMMEND WITH RESPECT TO RATE SPREAD?**

4 **A.** The Commission should implement PSE’s proposed rate spread, subject to  
5 removal of the proposed floor value, because it implements the results of the cost  
6 of service study without causing undue harm to other customers.<sup>16/</sup>

7 **III. HYDROELECTRIC GENERATION**

8 **Q. DO YOU SUPPORT STAFF’S RECOMMENDATION TO USE 50 WATER**  
9 **YEARS FOR MODELING HYDRO GENERATION?**

10 **A.** No.

11 **Q. PLEASE DESCRIBE STAFF WITNESS YOHANNES MARIAM’S**  
12 **RECOMMENDATION.**

13 **A.** Dr. Mariam recommends departing from the Commission’s historic use of 40  
14 years of streamflow data for modeling hydro generation.<sup>17/</sup> I note that Dr. Mariam  
15 appears to agree with me that the issue of the use of water years in modeling  
16 hydro generation should be studied further. Dr. Mariam states, “Staff encourages  
17 the Company to engage regional and national researchers to develop an approach  
18 for hydro normalization.”<sup>18/</sup> Dr. Mariam also agrees with my conclusion that the  
19 Commission has historically utilized a 40-year streamflow analysis for  
20 normalizing hydro generation.<sup>19/</sup>

21 Despite recognizing the Commission’s precedent regarding the use of 40  
22 years of hydro data, Dr. Mariam recommends that the Commission abandon its

<sup>15/</sup> Exh. No. \_\_ (DWS-1HCT) at 36.

<sup>16/</sup> See id. at 36-38.

<sup>17/</sup> Exh. No. \_\_ (YKGM-1T) at 5, 23-25.

<sup>18/</sup> Id. at 27.

<sup>19/</sup> Id. at 23-24.

1 historic approach to hydro normalization and do so before developing a consistent  
2 policy on hydro normalization for all three Washington investor-owned electric  
3 utilities. Dr. Mariam’s recommendation is based on his belief that “there is no  
4 definitive rule for deriving normal hydro or water years.”<sup>20/</sup>

5 **Q. WHY SHOULD STAFF’S 50-YEAR STREAMFLOW PROPOSAL BE**  
6 **REJECTED?**

7 **A.** The Commission has a long-standing precedent rejecting proposals to use 50 and  
8 60 years of hydro data.<sup>21/</sup> In addition, the Commission has found that the use of  
9 40 years of hydro data is appropriate for PSE because it is less prone to errors.  
10 For example, in 1993, the Commission rejected the Company’s proposal to use a  
11 50-year average and stated that Puget Sound Power & Light was “put on notice  
12 that [a 40-year rolling average] will remain the Commission’s position on this  
13 issue unless and until a clear and convincing argument supports a superior  
14 alternative.”<sup>22/</sup> Dr. Mariam does not provide a clear and convincing argument to  
15 abandon the use of 40 years of hydro data, nor is his alternative superior.

16 As I explained in my direct testimony, the use of the latest 40 years of  
17 hydro data is tested and proven, and should be used to develop base rates until the  
18 Commission determines that a different standard should be applied. Encouraging  
19 utilities to deviate from the existing 40-year standard on an ad hoc basis will  
20 result in proposals to use the number of streamflow years that produces the  
21 greatest rate increase, which is exactly what PSE has done in this proceeding.

<sup>22/</sup> WUTC v. Puget Sound Power & Light Co., WUTC Docket Nos. UE-920499 and UE-921262, Eleventh Suppl. Order (Sept. 21, 1993).

1 **IV. NATURAL GAS PRICES**

2 **Q. DO YOU HAVE ANY CONCERNS REGARDING STAFF’S NATURAL**  
3 **GAS PRICE PROPOSAL?**

4 **A.** Yes. Staff’s proposed natural gas price forecast should be rejected because it  
5 takes into account only the short-term future, and fails to propose a long-term,  
6 durable methodology for estimating natural gas prices for PSE.

7 Dr. Mariam’s gas price forecast attempts to forecast a “better” gas price to  
8 use in setting the Company’s base power costs under the Company’s power cost  
9 adjustment (“PCA”) mechanism. The analyses performed by both Staff and PSE  
10 are based on an assumption that recent gas prices are the best predictors of future  
11 gas prices. However, neither the Company’s nor Dr. Mariam’s analyses are  
12 accurate for the long-term, because recent prices are a less-reliable predictor the  
13 further out in time the analysis is performed. In contrast, I propose using  
14 normalized gas costs to set the power cost baseline.

15 **Q. WHAT IS THE IMPACT OF PSE’S PCA ON STAFF’S PROPOSED**  
16 **NATURAL GAS PRICE FORECAST?**

17 **A.** As I explained in my direct testimony, the value selected for natural gas in this  
18 proceeding will not have a significant impact on the Company because the PCA  
19 virtually eliminates sharing once the \$40 million PCA cap is reached, which will  
20 likely be well before July 1, 2006.<sup>23/</sup> As a result, prior to July 1, 2006, the PCA  
21 will allow PSE to recover deviations between the forecast gas price assumed in  
22 base power costs and the actual gas price. Dr. Mariam acknowledges that the  
23 PCA will limit PSE’s losses due to price fluctuations.<sup>24/</sup>

---

<sup>23/</sup> Exh. No. \_\_ (DWS-1HCT) at 16-17.

<sup>24/</sup> Exh. No. \_\_ (YKGM-1T) at 32.

1           The PCA provides for a new sharing mechanism applicable to the  
2           difference between the baseline gas prices and actual gas prices after July 1, 2006.  
3           At that point, the PCA should measure the difference between gas prices based on  
4           normalized conditions and actual gas prices, not the difference between forecast  
5           gas prices and actual gas prices. Staff's proposal is a short-term remedy, because  
6           the Staff forecast of gas prices does not extend beyond June 30, 2006.<sup>25/</sup> Staff's  
7           proposal requires the Commission to conduct a new proceeding to develop a new  
8           gas price forecast or new normalized gas prices prior to June 30, 2006.

9           In contrast, my proposal is a more durable, long-term solution regarding  
10          gas prices. I propose that the Commission adopt a long-term, normalized gas  
11          price forecast that is based on a more rigorous and sophisticated analysis than  
12          simply forecasting forward prices.<sup>26/</sup> ICNU's proposal, unlike Staff's, would not  
13          expire in June 2006, would not require a new proceeding to determine gas prices,  
14          and would allow the PCA to recover actual differences based on the agreed upon  
15          methodology in the PCA.

16   **Q.    DOES THIS CONCLUDE YOUR TESTIMONY?**

17   **A.    Yes.**
