Terminating Features	NRC	MRC	Change Fee	Description
Direct Termination Overflow (DTO)	\$10 per 8XX number	\$1 per 8XX number	\$10 per 8XX number	Allows dedicated access customer to control potential congestion of calls placed on an 8XX number by sending overflow calls, when all channels are busy on the primary trunk group, to another QCC trunk group or a single switched ANI within the same switch and/or in another switch. This feature allows the customer to define a Primary trunk group, with the option of either overflowing to one or two overflow dedicated trunk groups and/or an ANI. If the termination includes an ANI, it must come at the end of the sequence. The overflow sequence cannot overflow from an ANI to a dedicated trunk group
Super Trunk	\$0 per 8XX number	\$0 per 8XX number	\$0 per 8XX number	Allows multiple physical trunk groups within the same switch to be associated within a single virtual trunk group for routing incoming 8xx calls to multiple physical trunk groups. This configuration evenly distributes calls over multiple physical trunk groups, typically called "load balancing" in a cyclical hunt pattern.
In-Switch Overflow	\$0 per 8XX number	\$0 per 8XX number	\$0 per 8XX number	Allows multiple physical trunk groups within the same switch to be associated within a single virtual trunk group for routing incoming 8xx calls to multiple physical trunk groups. Traffic will always start at the first trunk group and overflow to the second trunk group after all channels are busy on the first trunk group. It does not load balance across the physical trunk groups.
Dialed Number Identification Service (DNIS)	No charge	No charge	No charge	Allows a dedicated access customer to receive calls from multiple 800 numbers on the same terminating trunk group by sending special identification digits along with the 800 call to the customer site. Customer must have proper equipment for this feature.
