	Projected Tariff Rider Balance										(341,660)	(758,361)	(1,354,138)	

Jan - Under collections of \$96k in tariff rider due to heating degree days being 19% below historical thereby causing retail consumption to be down by 13%. In spite of the less than forecasted consumption, the Washington electric tariff rider balance was reduced by \$533k.

Feb - Under collection of \$91k in tariff rider due to heating degree days being 17% warmer than historical normal resulting in 8% lower consumption as compared with forecast. In spite of less than forecasted consumption (less tariff rider collections), tariff rider balance was reduced by \$608k.

Mar - Under collection of \$65k in tariff rider due to heating degree days being 5% less than 30 year normal, 18% less for ytd. Tariff rider balance increased by \$83k due to the timing of February expenditures occuring in March.

Apr - Reduced the tariff rider balance by \$131k. Weather was 1% less than the 30 yr normal indicating that usage per customer was higher than budgeted.

May - Reduced the tariff rider balance by nearly \$724k.

Jun - Reduced the underfunded tariff rider balance by \$222k.

Jul - Reduced the underfunded tariff rider balance by over \$606k mostly due to less expenditures (mostly incentives)

Aug - Includes \$561,490 credit from Centralia environmental refund

Sep - collected less funding than forecast due to HDD/CDD being less than forecast and expenditures were higher than budgeted due to processing of more incentives than budgeted

Notes:

Decidential

1) Some items such as labor charged to a common WA-ID project when allocated to the individual states loses it's "labor" distinction and appears as a general implementation expense. This explains the variances between non-labor/non-incentive and labor.

2) DSM expenditures are budgeted on a annual basis and spread monthly on an equal basis. This timing difference between budget vs actual could attribute to some variances

Variance explanations:

- Jan \$77k unfavorable variance due to paying \$128k more in incentives than budgeted.
- Feb in spite of paying more than \$69k in incentives as compared with budget, we still had a favorable variance of \$173k.
- Mar 51% of unfavorable variance was due to paying more than \$226k in incentives as compared with budget. Remainder of the \$220k unfavorable variance is due to implementation expenditures that didn't occur in February as budgeted.

Apr - unfavorable variance was due to paying more than \$470k in incentives as compared with budget.

	Projected Tariff Rider Balance										(136,654)	(671,383)	(1,572,058)		

Jan - Under collections of \$86k in tariff rider due to heating degree days being 19% below historical thereby causing retail consumption to be down by 13%. In spite of the less than forecasted consumption, the Washington electric tariff rider balance was reduced by \$378k.

Feb - Under collection of \$106k in tariff rider due to heating degree days being 17% warmer than historical normal resulting in 8% lower consumption as compared with forecast. In spite of less than forecasted consumption (less tariff rider collections), tariff rider balance was reduced by \$68k.

Mar - in spite of paying \$108k more than budgeted in incentives, but reduced the tariff rider balance by \$101k.

Apr - reduced the tariff rider balanc eby \$90k. Weather was 1% less than 30 yr normal and while consumption was lower than budgeted, tariff rider expenditures were less than collected, therefore, reducing the balance.

May - reduced the tariff rider balance by nearly \$325k.

Jun - added \$4k to the underfunded balance.

Jul - added nearly \$240k to the underfunded balance mostly due to higher expenditures than budgeted. Also, natural gas consumption tends to drop off during the summer months, therefore there is less funding collected during these months.

Aug - reduced the underfunded tariff rider balance by nearly \$23k due to more HDD/CDD than budgeted and employees taking one (less expense than budgeted since it goes against an accrual vs the tariff rider)

 \mbox{Sep} - increased the underfunded balance by nearly \$240k due to HDD being 14% less than budgeted.

Notes

Distributed Gen

- 1) Some items such as labor charged to a common WA-ID project when allocated to the individual states loses it's "labor" distinction and appears as a general implementation expense. This explains the variances between non-labor/non-incentive and labor.
- 2) DSM expenditures are budgeted on a annual basis and spread monthly on an equal basis. This timing difference between budget vs actual could attribute to some variances

Variance explanations:

- Jan 79% of the unfavorable variance is due to the payment of nearly \$72k more in incentives than budgeted. Remainder of unfavorable variance was attributable spending of more implementation costs than budgeted.
- Feb 91% of the unfavorable variance is due to the payment of over \$169k more in incentives than budgeted. Remainder of unfavorable variance was attributable spending of more implementation costs than budgeted.
- Mar 90% of the unfavorable variance is due to the payment of over \$108k more in incentives than budgeted. Remainder of unfavorable variance was attributable spending of more implementation costs than budgeted.
- Apr 88% of the unfavorable variance is due to the payment of nearly \$19k more in incentives than budgeted. Remainder of unfavorable variance was attributable spending of more implementation costs than budgeted.
- May favorable variance of nearly \$189k mostly attributable to paying less in incentive than budgeted.

Jun - favorable variance of \$36k due to one leave (less expense labor--goes against paid time off accrual) and less incentives paid as compared with budget.

Jul - unfavorable variance of nearly \$65k most of which is due to higher participation in programs than budgeted and the remainder is due the greater implementation expenditures than anticipated.

Aug - \$170k favorable variance mostly attributable to processing of less incentives than budgeted.

Sep - \$110k favorable variance mostly attributable to processing of less incentives than budgeted.

	Projected Tariff Rider Balance										(158,138)	(365,951)	(640,216)	

Jan - tariff rider balance increased by \$48k due to the payment of \$364k more in incentives than budgeted.

Feb - reduced the tariff rider balance by \$408k mostly due to the processing of less incentives than budgeted (higher January month most likely contributed to the lower February processing of incentives).

Mar - reduced tariff rider underfunded balance by \$110k, due to processing \$86k less incentives as compared with budget and heating degree days being 5% less than 30 year normal (18% less ytd).

Apr - reduced tariff rider underfunded balance by \$352k, higher consumption than budgeted coupled with underspending as compared with budget.

May - reduced tariff rider underfunded balance by \$166k.

Jun - reduced the underfunded tariff rider balance by nearly \$119k.

Jul - reduced the underfunded tariff rider balance by nearly \$136k mostly due to incurring less expenditures than budgeted.

Aug - reduced the underfunded tariff rider balance by nearly \$210k mostly due to having less expenditures than collections.

Sep - reduced the underfunded tariff rider balance by nearly \$220k mostly due to the processing of less incentives than budgeted.

Projected Tariff Rider Balance

Variance Explanations:

Jan - tariff rider balance increased by \$48k

Feb - reduced the tariff rider balance by \$4

Mar - reduced tariff rider underfunded bal

Apr - reduced tariff rider underfunded bala

May - reduced tariff rider underfunded bal

Jun - reduced the underfunded tariff rider

Jul - reduced the underfunded tariff rider k

Aug - reduced the underfunded tariff rider

Sep - reduced the underfunded tariff rider

Notes

- 1) Some items such as labor charged to a common WA-ID project when allocated to the individual states loses it's "labor" distinction and appears as a general implementation expense. This explains the varian non-labor/non-incentive and labor.
- 2) DSM expenditures are budgeted on a annual basis and spread monthly on an equal basis. This timing difference between budget vs actual could attribute to some variances

Variance explanations:

- Jan \$347k unfavorable variance due to paying \$364k more in incentives than budgeted.
- Feb \$194k favorable variance mostly due to paying less incentives than budgeted (January's large amount of incentives probably causing February to be lower).
- Mar \$45k unfavorable variance due to the payment of \$86k more in incentives than budgeted.
- Apr \$194k favorable variance mostly due to the payment of less incentives than anticipated.

May - nearly \$30k favorable variance mostly due labor, probably more people taking one leave which goes against a liability account as opposed to the tariff rider.

Jun - \$26k favorable variance due to one leave (less labor expense--goes against paid time off accrual) and less incentives paid as compared with budget.

Jul - \$32k favorable variance due to one leave (less labor expense --goes against paid time off accrual)

Aug - \$64k favorable variance mostly attributable to employees taking one leave (reduce accrual rather than going against the tariff rider)

Sep - nearly \$96k favorable variance mostly attributable to processing less rebates than budgeted

	Projected Tariff Rider Balance										(25,914)	(176,854)	(451,873)	

Jan - Under collections of nearly \$11k in tariff rider due to warmer than budgeted weather. Actual expenditures were less than budget by \$16k. Reduced the underfunded tariff rider balance by \$251k.

Feb - Under collections of \$11k in tariff rider due to warmer than budgeted weather. Actual non-incentive expenditures exceed budget by \$15k. Underfunded tariff rider balance reduced by \$137k.

Mar - Under collections of \$4k in tariff rider due to heating degree days being 5% less than 30 year normal (14% less ytd). Actual expenditures were less than budget by \$44k. Underfunded tariff rider balance reduced by \$142k.

Apr - reduced the tariff rider balance by \$122k due to collected being higher than budget coupled with underspending

May - reduced the tariff rider underfunded balance by nearly \$30k.

Jun - added \$36k to the underfunded tariff rider balance.

Jul - added nearly \$198k to the underfunded tariff rider balance due to incurring higher expenditures than budgeted. Also, natural gas consumption tends to drop off during the summer months so less funding is collected during these months.

Aug - increased the underfunded tariff rider balance by nearly \$63k since we incur more expense than collections due to seasonality of heating.

Sep - increased the underfunded tariff rider balance by nearly \$61k partially due the collection of less funding than forecast

Projected Tariff Rider Balance

Variance Explanations:

Jan - Under collections of nearly \$11k in ta \$251k.

Feb - Under collections of \$11k in tariff rid \$137k.

Mar - Under collections of \$4k in tariff ride

rider balance reduced by \$142k.

Apr - reduced the tariff rider balance by \$: May - reduced the tariff rider underfunde Jun - added \$36k to the underfunded tarif Jul - added nearly \$198k to the underfund so less funding is collected during these m

Aug - increased the underfunded tariff ric

Sep - increased the underfunded tariff rid

Notes:

Residential

1) Some items such as labor charged to a common WA-ID project when allocated to the individual states loses it's "labor" distinction and appears as a general implementation expense. This explains the variances between non-labor/non-incentive and labor.

2) DSM expenditures are budgeted on a annual basis and spread monthly on an equal basis. This timing difference between budget vs actual could attribute to some variances

Variance explanations:

- Jan \$16k favorable variance due to less incentives processed as compared with budget.
- Feb \$7k unfavorable variance due to spending more on implementation costs as compared with budget.

- Mar \$44k favorable variance mostly due to the processing of less incentives as compared with budget.
- Apr \$56k favorable variance mostly due to the processing of less incentives as compared with budget.

May - \$28k favorable variance mostly due to the processing of less incentives as compared with budget.

Jun - \$20k favorable variance mostly due to one leave (less expense labor--goes against paid time off accrual) and less incentives paid as compared with budget.

Jul - \$102k unfavorable variance mostly due to more incentives processed as compared with budget; remainder due to more implementation cost than budgeted most likely due to increased program demand

Sep - \$48k favorable variance attributable to the processing of less incentives than budgeted.

Aug - \$40k favorable variance attributable to the processing of less incentives than budgeted.
