FOR COMMISSION'S RECEIPT STAMP

GENERAL RULES AND REGULATIONS  
Rule 2  
(Continued)  
TYPES OF SERVICE

Residential Service: Service furnished to Customers using service for domestic purposes in single-family dwelling houses; mobile homes, apartments and flats when each dwelling unit is separately metered and billed; fraternity and sorority houses, and combined family dwelling houses and rooming houses where not more than four rooms are used as sleeping or living quarters by persons not members of the Customer's family but excluding recreational vehicles, and dwellings where the tenancy is typically less than 30 days, such as hotels, motels, camps, lodges and clubs. Residential Service also includes an "adult family home" which is a regular family abode in which a person (or persons) provides personal care, special care, room and board, to more than one but not more than six adults who are not related by blood or marriage to the person or persons providing the services. Residential rates will be applicable to residential buildings served through one meter but so constructed as to provide separate living units for more than one family only when the minimum charge, basic charge and the number of kilowatt-hours in each of the rate blocks is multiplied by the maximum number of families or single-family units which could be so served. For so long as service capacity is not increased, rewiring to multiple residential meters will not be required for multi-family structures which receive residential service through a single meter.

Any residential space-heating or water-heating appliance having a total capacity greater than 11.5 kilowatts shall be so designed and controlled that not more than 11.5 kilowatts will be switched on or off at any one time.

Residential heat pumps supplemented by electric resistance heating elements shall be designed, installed and operated such that the resistance heat is not switched on at the same time the heat pump motor starts. The Customer shall contact Company before the installation of residential space heating units.

Where the major portion of the electric service or capacity provided for dwelling is used regularly for the conduct of business, or for any nonresidential purpose, the electricity consumed in the portion so used will be separately metered and billed under the appropriate schedule. If separate circuits are not provided by the Customer, the entire premises may be classified as nonresidential and billed accordingly.

Issued November 24, 1999 Effective January 1, 2000
