

EXHIBIT NO. T-____ (CEO-3)
DOCKET NO. TG-920234
WITNESS: CHARLES E. OLSON

**BEFORE THE
WASHINGTON UTILITIES AND TRANSPORTATION
COMMISSION**

**WASHINGTON UTILITIES AND TRANSPORTATION
COMMISSION**

COMPLAINANT

VS.

US ECOLOGY, INC.

RESPONDENT

REBUTTAL TESTIMONY

002940

PREPARED REBUTTAL TESTIMONY OF
CHARLES E. OLSON

1 Q. Please state your name.

2 A. My name is Charles E. Olson.

3 Q. Are you the same Charles E. Olson who testified previously
4 in this case?

5 A. Yes.

6 Q. Have you reviewed the Staff and intervenor testimony that
7 was filed in this case?

8 A. Yes, I have. In addition, I was present during the cross-
9 examination of their case.

10 Q. What return requirement does Mr. Nikula recommend in this
11 case?

12 A. Mr. Nikula recommends a return requirement of approximately
13 \$54,000; this works out to about \$6,500 per month. He
14 derived his return requirement using the rate of return of
15 18.5 percent that I recommended in combination with a rate
16 base of approximately \$193,000. The \$54,000 includes an
17 allowance for income taxes.

18 Q. Would a pre-tax return requirement of \$54,000 provide for
19 a reasonable "end-result" as indicated by the U.S. Supreme
20 Court in the Hope case?

21 A. No, it would not. Essentially what Mr. Nikula is proposing
22 is that US Ecology provide a complex, high risk service for
23 operating expenses only. What he has done is to apply my

1 rate of return to a rate base that approximates zero and
2 obtained a return that is less than two percent of US
3 Ecology's expenses. Even the proposed expenses are
4 understated. The result will not permit capital attraction
5 on reasonable terms.

6 Q. What does the Hope case require?

7 A. My answer is not intended to be a legal opinion. As an
8 economist, I read Hope to require a reasonable end-result
9 for US Ecology's Richland site. This means that the
10 revenues must be adequate to pay reasonable expenses and
11 taxes as well as providing for a return that will permit
12 capital attraction on reasonable terms. Neither Staff nor
13 the intervenors have challenged my testimony regarding the
14 high risk nature of the LLRW business. What has been
15 ignored is the fact that high risk requires a high return
16 and that return must be available in dollars, not
17 percentages. Mr. Nikula's recommendation simply doesn't
18 provide for a return requirement.

19 The return requirement must be adequate on a stand-
20 alone basis to permit capital attraction on reasonable
21 terms. This means that the rates should not be based on
22 the premise that the Richland site is part of a corporation
23 that has available capital and expertise to assist in
24 financing and operating it. Instead the rates must be
25 based on a revenue requirement that will permit the
26 Richland site, operating alone to cover, expenses plus earn

1 a return sufficient to attract capital.

2 Q. Why is the proposed return of \$54,000 per year inadequate?

3 A. It is inadequate because it doesn't even provide US Ecology
4 with a reasonable chance to stay in business, much less to
5 attract capital. Staff and intervenors both have agreed
6 that US Ecology's operation in Richland is essentially a
7 fixed cost business. This means that the costs go on even
8 if the revenues don't flow in. If volumes are
9 overprojected as they appear to be, US Ecology's Richland
10 site will be bankrupt in a month. This will occur even if
11 the volumes are overestimated by only 300 cubic feet a
12 month. Given that Staff is insisting on imputing volumes
13 that cannot possibly materialize in early 1993, bankruptcy
14 is inevitable under Staff's approach.

15 Q. Would US Ecology do any better under Mr. Drazen's return
16 proposal?

17 A. Somewhat. However, in my view it is not enough. While
18 \$1.44 million is more than 15 times greater than the \$0.054
19 million that Staff is proposing, it only amounts to
20 \$120,000 per month. Given the volumes and the rates his
21 clients propose, a shortfall of a few thousand cubic feet
22 per month would also put the Richland site out of business.

23 Q. But isn't Mr. Drazen proposing the same profit margin as
24 your comparable companies earned during recent years?

25 A. In a sense, that is correct. What he has done is to use
26 Value Line information to compute the average operating

1 margin for the last 5 years. Apparently it was his view
2 that if it was appropriate for me to use these companies to
3 estimate a rate of return, then he could use them for
4 purposes of computing an operating margin. But there are
5 several reasons that the procedure he followed is
6 inappropriate.

7 First, I estimated the return on equity for the 5
8 comparable companies and applied that return to a 100
9 percent common equity base because of US Ecology's risk and
10 inability to obtain financing on a stand-alone basis. Mr.
11 Drazen's use of an operating margin effectively reduces the
12 return by including the substantial debt of these companies
13 in the calculation. Second, the earned returns that are
14 implicit in his operating margin calculation appears to
15 average somewhat less than the 18.5 percent return that I
16 recommended. To that extent the cost of capital is
17 underestimated as well. For example, the average return
18 for Chambers Development during the period he utilized was
19 only 11.4 percent, well below my 18.5 percent figure.

20 Third, Mr. Drazen applied the operating margin
21 approach in an unfair manner. He used actual operating
22 margins for the comparable companies but then applied them
23 to a stripped down level of expenses for US Ecology. In my
24 view, this is unfair because it produces a meaningless
25 comparison. Either he should have permitted US Ecology
26 expenses that are similar to those of the comparables or he

1 should have adjusted the operating margins of the
2 comparables to reflect what their profits would have been
3 with a level of expenses that had been determined to be
4 reasonable under public utility regulation.

5 Q. In your view, what would an appropriate operating margin be
6 for US Ecology?

7 A. If risk differences are considered, an appropriate
8 operating margin would probably be between 50 and 60
9 percent.

10 Q. At page 15 of his direct testimony Mr. Drazen said that you
11 didn't quantify the extent to which any particular level of
12 return will produce financial integrity for US Ecology. He
13 also says that it isn't clear why US Ecology would need to
14 borrow money. Would you please response to that testimony?

15 A. Yes. Mr. Drazen's general problem seems to be that the
16 standard of financial integrity is not particularly well
17 defined in this case (page 17, ll.16-18). In my view, the
18 financial integrity standard has always been quite clear:
19 it means that the regulated entity has the ability to
20 obtain capital on reasonable terms on a stand-alone basis
21 under almost any market conditions. Now I would agree that
22 it is difficult to determine exactly what the financial
23 integrity of the Richland operation will be in two or three
24 years following the implementation of rates in this case.
25 But it seems quite obvious that an after-tax income flow of
26 \$2-3 million per year is necessary to develop a financial

1 track record. Once such an earnings record is achieved it
2 will be possible to assess the financial integrity of the
3 Richland site.

4 Q. At page 19, Mr. Drazen says that US Ecology's parent,
5 American Ecology, has been able to obtain debt financing.
6 Does that have any relevance for purposes of this case?

7 A. There is some relevance. As a starting point, however, US
8 Ecology's Richland site is at issue here, not American
9 Ecology. Under the guidelines laid down in the Hope case,
10 US Ecology must have financial integrity on a stand-alone
11 basis. American Ecology's ability to attract capital is of
12 no relevance. Beyond that, however, I disagree that the
13 convertible debentures referred to are debt. From an
14 economic perspective those debentures were equity capital.
15 In addition, their debt capital had been converted to
16 equity capital in 1991.

17 Regarding the five-year bank loan secured by
18 equipment, that is clearly not an indication of financial
19 integrity. Any company, even one in bankruptcy, can obtain
20 secured financing. Financial integrity means much more
21 than being able to finance part of the cost of a bulldozer
22 at a fairly high rate of interest. In my view, American
23 Ecology's financial statements suggest that US Ecology's
24 parent is not at all financially strong.

25 Q. At page 18 of his direct testimony Mr. Drazen says that
26 there is no yardstick to determine marginal cost in this

1 case nor to assess whether the charges are equal to
2 marginal cost. Do you agree?

3 A. No. In my opinion the marginal cost evidence that was
4 presented for the Needles, California site was adequate.
5 The intervenors and Staff had the opportunity to review
6 that study and make any adjustments they felt to be
7 reasonable. Instead, they chose to ignore the concept and
8 the data. Marginal cost studies are never as precise as
9 historical cost studies because of their forward-looking
10 nature. But that doesn't invalidate such studies. As
11 things now stand, US Ecology has the only marginal cost
12 evidence in the record. That evidence should be used as a
13 basis for setting rates in this case.

14 As far as the issue Mr. Drazen raises relative to
15 state charges and taxes, there is little to be said. All
16 states place a variety of charges and taxes on regulated
17 operations. Marginal cost pricing should not be criticized
18 because state authorities decide to assess taxes for
19 certain services. In the case of LLRW site, the charges
20 may well be for the purpose of internalizing certain costs
21 that would otherwise be externalities.

22 In my view, Mr. Drazen should have presented his own
23 marginal cost study. It is unfair of him to criticize mine
24 and then make the claim that marginal cost is irrelevant.
25 I frankly can't think of a case in which it is more
26 important. There is little doubt in my mind that the right

1 price in a situation like this is one that reflects full
2 marginal cost. Arguments against marginal costs are often
3 voiced by polluters but they should clearly be ignored.

4 Q. Staff witness Parker said during cross-examination that if
5 volumes are overestimated that there are safeguards built
6 into the ratemaking approach in Washington. Is that
7 correct?

8 A. I assume that she was referring to the volume adjustment
9 mechanism. While that mechanism permits adjustment for
10 year-to-year changes, it would not keep US Ecology out of
11 bankruptcy under the Staff and intervenor cases. There
12 simply wouldn't be time for the mechanism to even operate.

13 Q. During cross-examination Mr. Nikula said that he didn't
14 include a working capital adjustment because American
15 Ecology's balance sheet did not indicate that there was
16 such a requirement. Do you agree?

17 A. No. At December 31, 1990, December 31, 1991, and March 31,
18 1992, current assets exceeded current liabilities by some
19 \$12-13 million. Based on the American Ecology information,
20 there is clearly a working capital need.

21 Q. During his cross-examination Mr. Nikula said that the
22 return on equity is a measure of the end-result. Do you
23 agree?

24 A. No. The ability to attract capital on reasonable terms is
25 the measure of the end-result. A high return doesn't
26 indicate anything, especially in a case in which it is

1 applied to a de minimus rate base.

2 Q. During cross-examination (Tr. 523) Mr. Nikula said that the
3 rate base he was proposing was the original cost of the
4 Richland site for ratemaking purposes. Do you agree that
5 his figure of \$193,465.29 is the original cost?

6 A. No, I do not. Original cost is the cost to the first
7 person to devote the property to public service. In that
8 US Ecology has never been regulated, the property has never
9 been devoted to public service. It is both unrealistic and
10 unfair of Mr. Nikula to use the depreciated accounting
11 costs of facilities that were used in an unregulated
12 business as a proxy for original cost. US Ecology had no
13 knowledge of the possibility of regulation when accounting
14 and depreciation decisions were made. Not only that, any
15 early losses were surely considered as an investment that
16 would later be recouped with a return. A proper
17 original cost could be obtained in one of two ways. First,
18 my estimate of long-run marginal cost is a reasonable
19 figure to use for original cost because of the
20 comparability of the Richland and Needles sites. Second,
21 an attempt could be made to use the market price of
22 American Ecology's common stock to determine the value of
23 the Richland site.

24 In any event, Mr. Nikula's rate base is not original
25 cost. It is simply an estimate of accounting cost less
26 depreciation taken in the past. There is no basis in

1 accounting, economics or regulation to use the \$193,000
2 figure for rate base.

3 Q. During cross-examination Mr. Wilson said that there was no
4 evidence that US Ecology practiced perfect price
5 discrimination. If that is true, does it suggest that US
6 Ecology has a monopoly in the LLRW market?

7 A. No. If US Ecology is a monopolist, perfect price
8 discrimination would be relatively easy to practice. The
9 use of price sheets in combination with annual prices
10 increases is indicative of a competitive market, not
11 monopoly.

12 Q. At page 25 of his direct testimony Mr. Young suggests that
13 an appropriate pricing framework for irradiated hardware
14 would be cost plus a mark-up of 41 percent. Would that be
15 appropriate?

16 A. No. His approach amounts to short-run marginal cost
17 pricing plus a mark-up. As shown in US Ecology's direct
18 case, the LLRW business is characterized by a high
19 percentage of fixed costs. Mr. Young's methodology would
20 ignore those costs and focus on short-run variable costs.
21 In my view, that is inappropriate and would penalize other
22 users. Irradiated hardware must be priced in a way that
23 will recover all of the costs associated with its disposal,
24 not just short-run marginal costs plus a markup.

25 Q. Does this conclude your prepared rebuttal testimony?

26 A. Yes, it does.
