Please do not accept any 20-year energy proposal from Puget Sound Energy that does not address a plan to retire the dirty, dangerous and increasingly expensive coal plant that it invests in. We also urge you to seek a just transition for the coal plant's workers and their families.

This is a huge opportunity to invest in local jobs and a clean energy future instead of dumping millions of dollars into an outdated coal-fired power plant. In addition to creating good paying local jobs that will boost our economy, dumping coal will improve public health and significantly cut carbon pollution.

Owners of more than 200 coal plants across the country have decided that coal is too costly to continue to burn, including Portland General Electric and TransAlta here in the Northwest. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest."

As PSE finalizes its 20-year electricity plan, it is in our best interest to realize the risks associated with coal power to our health, the environment and ratepayers. It is time to develop a plan to replace its coal power with sustainable energy - energy efficiency upgrades and wind and solar power.

The choice is whether to spend millions of dollars propping up the aging, out-of-state coal plant in Colstrip, MT or invest in clean energy and jobs for Washington's future. Let's create thousands of jobs, and take a step on climate change in the process.

Please do not accept any 20-year energy proposal from Puget Sound Energy that does not address a plan to retire the dirty, dangerous and increasingly expensive coal plant that it invests in. We also urge you to seek a just transition for the coal plant's workers and their families.

This is a huge opportunity to invest in local jobs and a clean energy future instead of dumping millions of dollars into an outdated coal-fired power plant. In addition to creating good paying local jobs that will boost our economy, dumping coal will improve public health and significantly cut carbon pollution.

Owners of more than 200 coal plants across the country have decided that coal is too costly to continue to burn, including Portland General Electric and TransAlta here in the Northwest. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest."

As PSE finalizes its 20-year electricity plan, it is in our best interest to realize the risks associated with coal power to our health, the environment and ratepayers. It is time to develop a plan to replace its coal power with sustainable energy - energy efficiency upgrades and wind and solar power.

The choice is whether to spend millions of dollars propping up the aging, out-of-state coal plant in Colstrip, MT or invest in clean energy and jobs for Washington's future. Let's create thousands of jobs, and take a step on climate change in the process.
