

The evidence is clear.

In Ontario,

- electricity costs 27 cents /kwhr, the gov't. borrowed money to rebate from 36 cents
- Electricity bills are \$600 to \$900 a month
- Ontario adds on a 70% surcharge to electric use, the global adjustment fee
- The \$1 B program for Smart meters now costs \$2 B, they don't work, major benefits are unrealized, the program is incomplete and limiters installed on meters won't allow a microwave to operate
- Another says, Electricity takes half a month's pay
- HydroOne left one family of 6 without power for 6 months
- Another family says they fear HydroOne, afraid to talk on camera; The father brings water home from work so his family can cook, drink, bathe
- Another said their basement flooded since the electricity was shut to the sump pump; mold has grown 6 ft high on the basement walls, it stinks terrible; insurance won't pay since the house has no electricity
- Mothers say they must cook dinner outside on the barbeque during blizzards

In South Australia, when the wind turbine system is stressed,

- Rates shoot to the moon, with costs to \$13.44/kwhr
- During winter or summer, the wind generation, now 40% of capacity cannot keep pace with demand
- So what do they do, shut the Holden GM car factory in Adelaide with loss of 14,000 jobs, to stabilize the elec. grid

In Germany,

- The combination of highest rates in the world at 44 cents/kwhr, and subsidies to renewables that are now unaffordable, the Energy Minister says we can do no more, as Germany ins on verge of de-industrialization

In Spain,

- For each renewable job created that cost \$753,778 per job caused the loss of 2.2 jobs elsewhere in the economy; each green megawatt caused the loss of 5.39 jobs elsewhere in the economy

In Washington,

- HydroOne's practices coming from Ontario will bring disconnects to low-income to middle-income wage earners; the result will be more people in hospitals seeking aid, more people on social services who have no source of income, no livable homes
- Gov. Inslee's carbon tax will make many goods unaffordable; the carbon tax at \$50 per tonne will add \$1,987 to the yearly gasoline bill; will have more severe impact on low income and high risk residents;
- Does the Gov. know that 70% of the carbon tax is taxing AIR, not fuel?
- Gov. Inslee's cap and trade will add \$20,000 to costs of households, for fuel, heating, for all number of goods and services says a US Gov't Senate Minority Report
- The combination will certainly bring death to many, according to EPA's own benchmarks
- What benefit accrues to reduce the amount of CO2 in the atmosphere? Is there any proof to the benefit? Is there any proof to the risk of CO2?
- Does the Gov. know that 98% of CO2 comes from natural sources and that CO2 has no effect on climate rendering his actions against CO2 irrelevant?
- Does he know this?

Draw attention to wind turbine data

Draw attention to Catastrophe coming to NY, CA and RPS
