Contest of violation:

I myself Dylan Otter called the 811 call center on Friday 7/8/22 and ordered the locates at the above address, the homeowner was present at the time.

When we started the work all locates had been painted out in front of the associated property. All utilities were painted, COB, PSE, CNG and communication. When the gas line was struck CNG came out and said "we didnt know that service line was there, its not in our records or on our computer" the guy that painted the locates was present and confirmed that.

I am trying to figure out why locates were painted at the above address if nothing was "called in". When we see locates painted within our white arrows and marks we assume they are for our project, not sure how we would know if they were for us or somebody else when they are painted within our limits?

When I look at the 811 center database I dont see any locates called in for that area 3033 or surrounding homes. Why would there be paint on the ground if nothing was called in?

If needed I can get you the contact information for the homeowner as well.

Please call or email with any questions.

Thanks Dylan
