Subject: Service types

<<srvc_types_mtb.xls>> We are attempting to identify the service types provided in the customer location info produced to us in May. The document attached shows where we have questions. We cannot process the information through TNS without mapping the service types. I am hoping that your folks can help us by identifying the listed service types.

I believe that this is covered by our first set of data requests. If you will require a new request, please let

me know immediately so we can avoid additional delay. Thanks. srvc_types_mtb.xls

Code	Type
R	Switched Residential
B	Switched Business
P	Switched Public
