Rocket UE-200115 - Puget Sound Energy (PSE)

I would like the following written statement entered into the public record for the October 8, 2020 Public Comment Hearing sessions on the proposed sale of Colstrip Assets in Montana and others not fully described in PSE's filing insert 7481 8/20

I approve of the sale if: a non-coal source replaces the loss and is not nuclear or other toxic or more toxic source; if buy-back fuel first year and futures do not exceed the cost to customers if Colstrip not sold; if the sale is not to misrepresent the true fuel source labeling steam, when coal.

All details of the fuel sources and plans to transport to PSE customers needs to be revealed including pipes that damage property without owner consent and/or approval and cost to local environments.

wind and solar is most preferable.

Nuclear is cheap & clean to the observer. The risk to our DNA, water & food supply far too high. No to Nuclear. Holli Euksen
