I am strongly opposed to ANY legislation which enables utility companies to install "SMART" meters in the Puget Sound region. The health implications of these meters are well established (see <https://articles.mercola.com/sites/articles/archive/2017/08/05/smart-meter-dangers.aspx>) . Persons acting under the authority of any regulatory body to install these health destroying units will be held personally accountable for the health damages resulting from the use of these units and will be sued in their personal capacity. My health is the most important asset I have; equally important is the health of my children and my neighbors; these units are also implicated in harm to wildlife. The risks to everyone far out weighs any desire to gather data or control the use of energy. We have sufficient technologies in place to measure our energy use; we have sufficient knowledge regarding conservation; we have programs to improve the energy efficiency of existing structures and those built in the future. These meters are NOT safe, they are NOT necessary, and foisting them on an unsuspecting public is a CRIME.
