2004 PSE GENERAL RATE CASE  
WITNESS: JOHN H. STORY

BEFORE THE  
**WASHINGTON UTILITIES AND TRANSPORTATION COMMISSION**

**WASHINGTON UTILITIES AND  
TRANSPORTATION COMMISSION,**

Complainant,

v.

**PUGET SOUND ENERGY, INC.,**

Respondent.

Docket No. UE-04  
Docket No. UG-04

PREFILED DIRECT TESTIMONY OF  
JOHN H. STORY (NONCONFIDENTIAL)  
ON BEHALF OF PUGET SOUND ENERGY, INC.

**APRIL 5, 2004**

1                   **PUGET SOUND ENERGY, INC.**

2                   **PREFILED DIRECT TESTIMONY OF JOHN H. STORY**

3                   **I.       INTRODUCTION**

4    **Q.    Please state your name, business address, and present position with Puget  
5                   Sound Energy.**

6    **A.    My name is John H. Story. I am the Director of Cost and Regulation at Puget  
7                   Sound Energy. My business address is 10885 N.E. Fourth Street, Bellevue,  
8                   Washington, 98009.**

9    **Q.    Would you please provide a brief description of your educational and  
10                  business experience?**

11   **A.    Please see Exhibit No.\_\_\_\_ (JHS-2).**

12   **Q.    What topics are you covering in your testimony?**

13   **A.    I will present the calculation of the adjusted test period, ratebase, working capital,  
14                  conversion factor and the overall revenue requirement for the electric results of  
15                  operations. I will explain the various adjustments to the results of operations for  
16                  the current test year and, after taking into account these adjustments, present the  
17                  adjusted test period and the resultant revenue requirement. Based upon the  
18                  adjusted test period revenues of \$1,425,200,434 1,414,825,578 for sales to  
19                  customers, the total requested electric revenue increase is \$81,446,431 82,819,884**

1 | which is an average ~~5.71~~ 5.84%

John H. Story

Exhibit No \_\_\_\_ (JHS-1T)  
Page 3 of 31  
**REVISED 7/19/04**

1 increase.

2 I also present the impact of the general rate case adjustments on the Power Cost  
3 Baseline Rate used in the Power Cost Adjustment (PCA) Mechanism.

4 Q. Please explain your Exhibit No.\_\_\_\_ (JHS-E3).

5 A. The first page of this exhibit, Summary page, presents the unadjusted operating  
6 income statement and Average-of-the-Monthly-Averages ratebase for the  
7 Company as of September 30, 2003. Each of these items is then adjusted for the  
8 summarized proforma and restating adjustments. The revenue deficiency is added  
9 to the adjusted income statement and the impact on the operating income  
10 statement is presented. The rest of the exhibit is composed of two sections,  
11 described below.

12 Pages E3-A through E3-D of this Exhibit No.\_\_\_\_ (JHS-E3) present a summary  
13 schedule of all the proforma and restating adjustments. The first column of  
14 numbers, on page E3-A, is the unadjusted net operating income for the year ended  
15 September 30, 2003 and the unadjusted ratebase for the same period. Each  
16 column to the right of the first column represents a proforma or restating  
17 adjustment to net operating income or ratebase. Each of these adjustments has a  
18 supporting schedule, which is referenced by the page number shown in each  
19 column title.

20 The last column, shown on page E3-D of the summary schedule, summarizes all  
21 of the adjustments and is the adjusted test period results used to calculate the

1 revenue deficiency.

2                   **II. ELECTRIC AND COMMON ADJUSTMENTS**

3   **Q. Please describe each adjustment, explain why it is necessary, and identify the**  
4   **effect on operating income or ratebase.**

5   **A. I will explain the adjustments generally in the order as they are shown on the**  
6   **summary schedule.**

7                   **Temperature Normalization**

9                   E3), page E3-A, column 2.01, which would have occurred, had the temperatures  
10                  during the test year been normal. The difference between the actual Generated,  
11                  Purchased and Interchange (GPI) and temperature normalized GPI is adjusted for  
12                  system losses, allocated to the rate classes, and the revenue impact (based on the  
13                  applicable end step energy rate for each rate class) is calculated. *See*  
14                  Mr. James Heidell's testimony, Exhibit No. \_\_\_\_ (JAH-1T), for a discussion  
15                  regarding the allocation to the rate classes based on the proposed rate class level  
16                  weather normalization methodology.

17                  Net operating income is increased by \$4,369,788 as a result of this adjustment.

18   **Q. Please describe how the test year delivered load was normalized.**

19   **A. Test year GPI load of 20,641 MWH were temperature normalized using a**

1        technique that is comparable to that used by many utilities. The temperature  
2        normalization process requires that an estimated relationship (coefficients)  
3        between daily customer load and observed temperatures be calculated. Heating  
4        degree days (HDD) and cooling degree days (CDD) are used to reflect this  
5        temperature sensitive portion of load. It is necessary to have separate temperature  
6        (or HDD and CDD) estimated coefficients for each month because of changing  
7        temperature-load relationships during the year. With these estimated coefficients,  
8        temperature normalized load can be approximated by multiplying the coefficients  
9        by normal temperatures (in this case the thirty year average temperature 1973-  
10      2002). The result is temperature normalized load for the test year which can be  
11      compared to actual test year load to determine the test year temperature load  
12      adjustment. In this case, the test year temperature load adjustment is 97,905  
13      MWH, or 91,638 MWH when adjusted for losses. This adjustment is the same  
14      methodology as what the Company used in its rebuttal case in the Power Cost  
15      Only Rate Case (PCORC) filing, Docket No. UE-031725. As agreed to in that  
16      filing, the Company will be meeting with Commission Staff, plus other interested  
17      parties, to attempt to reach consensus on a methodology for normalizing electric  
18      loads. If these discussions result in a change to the methodology the Company  
19      has used for this calculation, the Company will update its calculation once the  
20      changes are identified.

21      **Q. Please continue with your discussion of the proforma and restating  
22      adjustments.**
