APPENDIX C-3A. BASELINE FORECASTS

Appendix C-3A presents baseline load forecasts by state, sector, and segment, in aMW at generator. Special accounts were removed from industrial forecasts. These forecasts were informed by PacifiCorp's forecasts, however, they may differ due to treatment of codes and standards and econometric factors.

APPENDIX C-3B. BASELINE FORECAST PIE CHARTS

Appendix C-3B presents baseline load forecasts in 2032 by state, sector, segment and end use, in aMW at generator. Special accounts were removed from industrial forecasts. These forecasts were informed by PacifiCorp's 2012 forecasts, however, values may differ due to treatment of codes and standards and econometric factors.

Figure C-3B.1. Baseline Sales 2032 - California: Residential by Segment

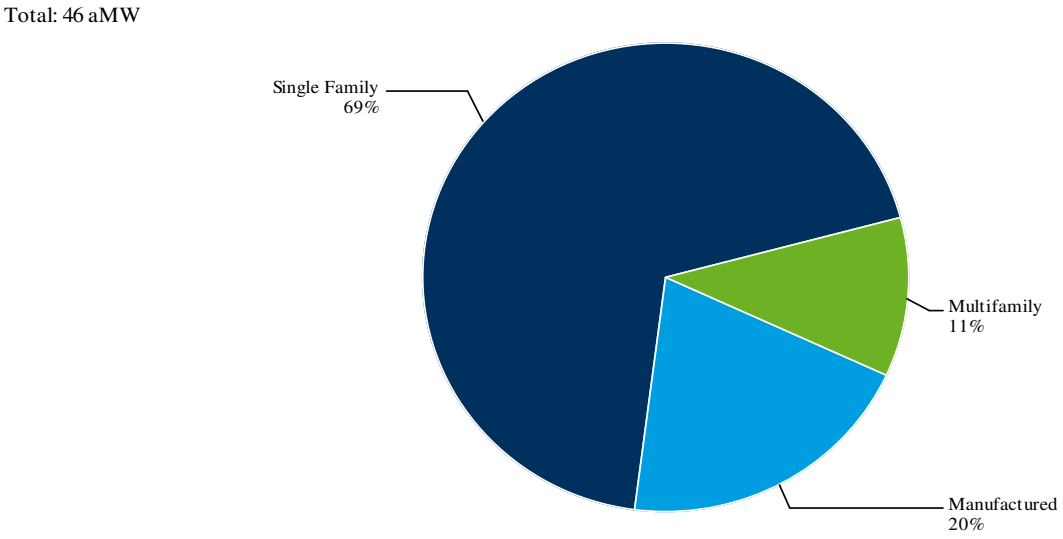

Figure C-3B.2. Baseline Sales 2032 - Idaho: Residential by Segment

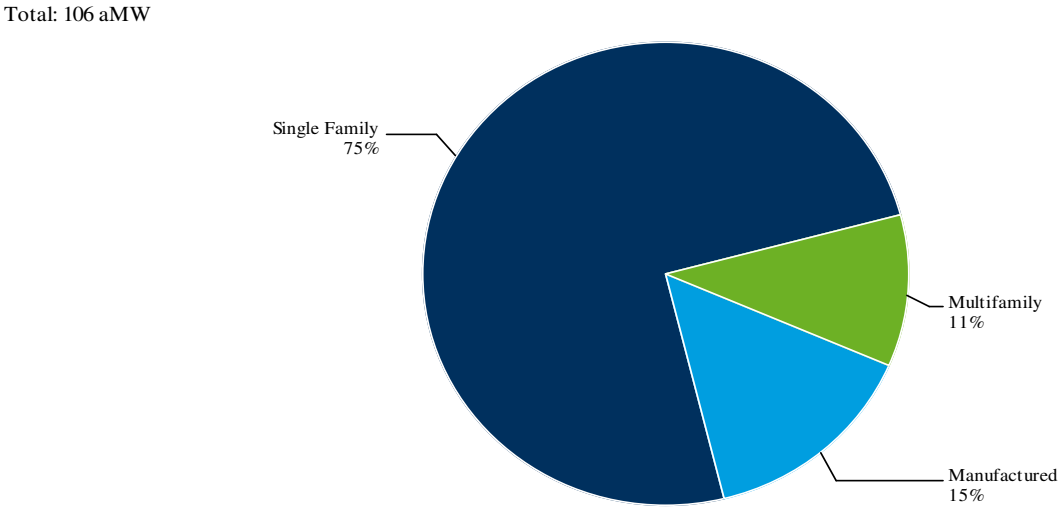

Figure C-3B.3. Baseline Sales 2032 - Utah: Residential by Segment

Total: 820 aMW

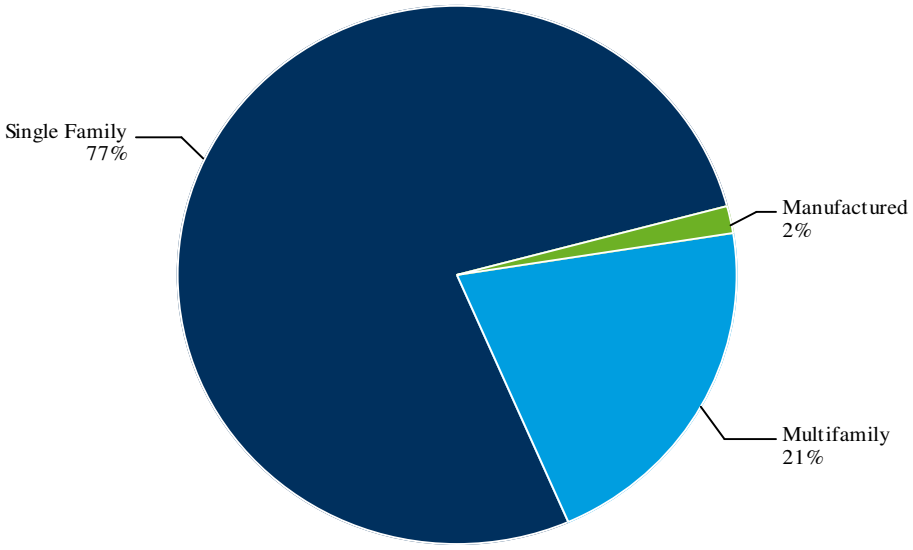

Figure C-3B.4. Baseline Sales 2032 - Washington: Residential by Segment

Total: 196 aMW

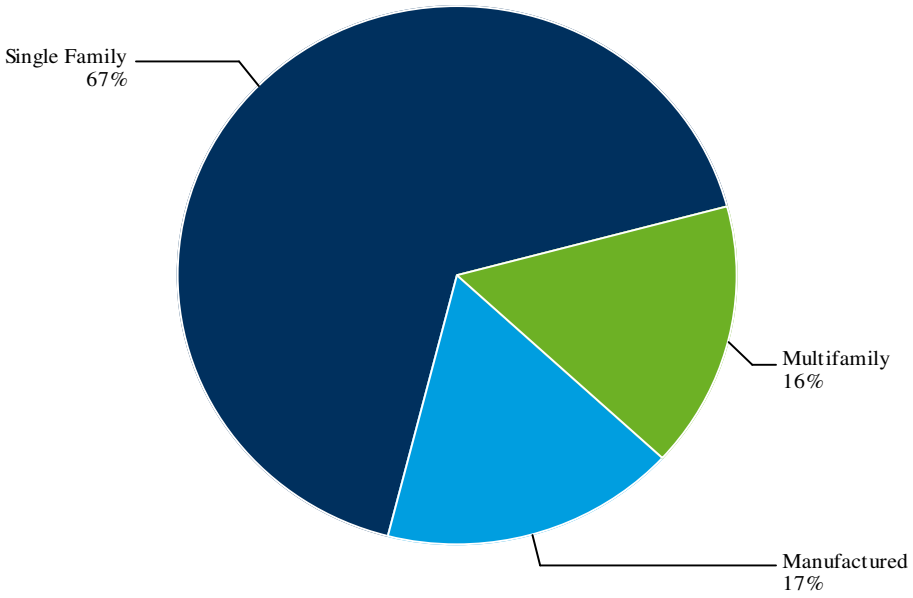

Figure C-3B.5. Baseline Sales 2032 - Wyoming: Residential by Segment

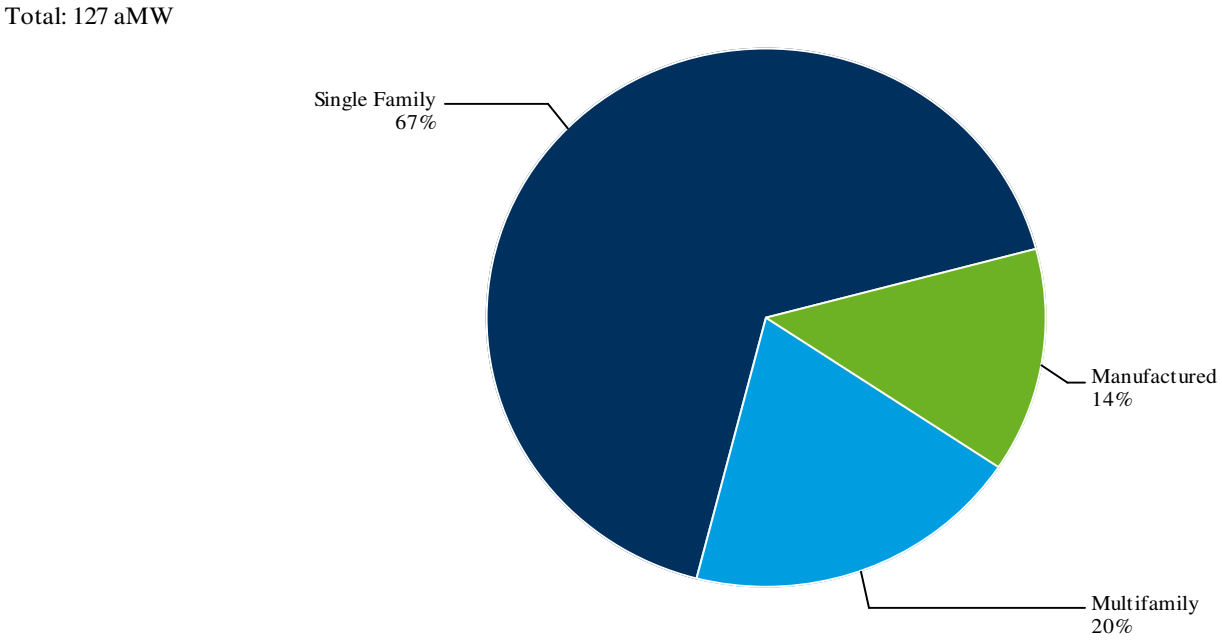

Figure C-3B.6. Baseline Sales 2032 - California: Commercial by Segment

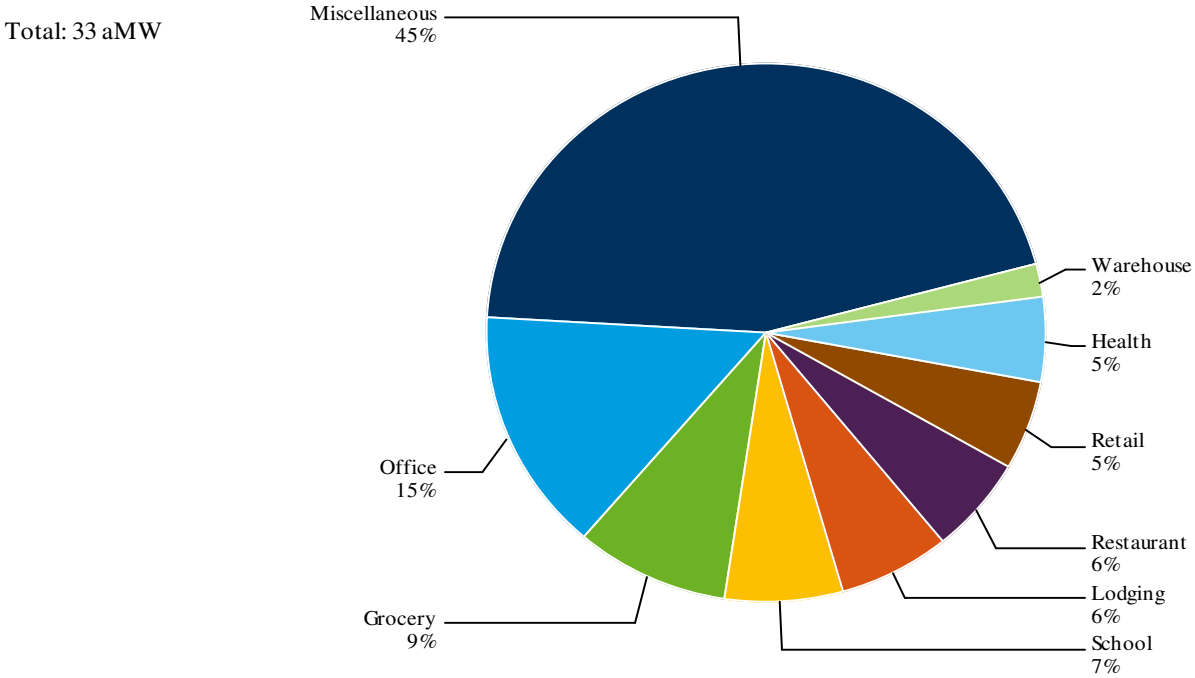

Figure C-3B.7. Baseline Sales 2032 - Idaho: Commercial by Segment

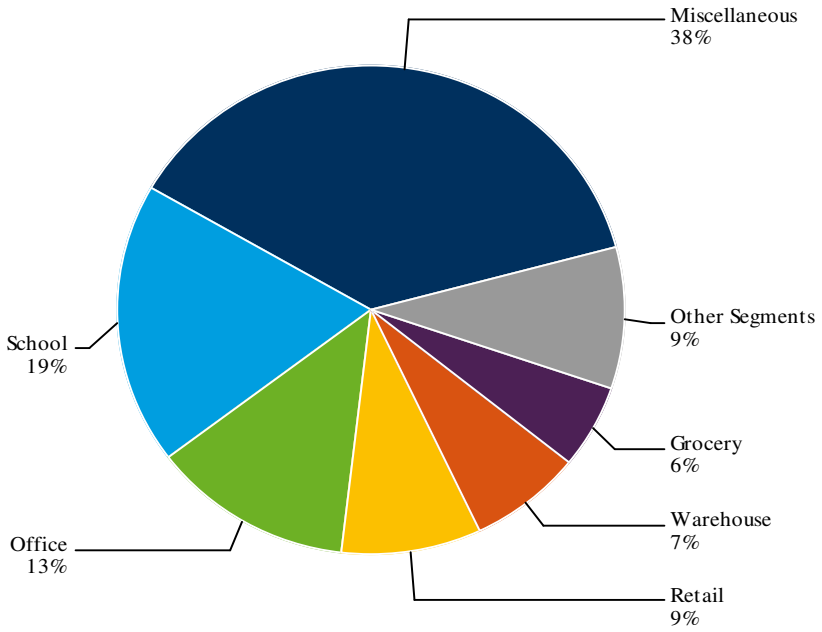
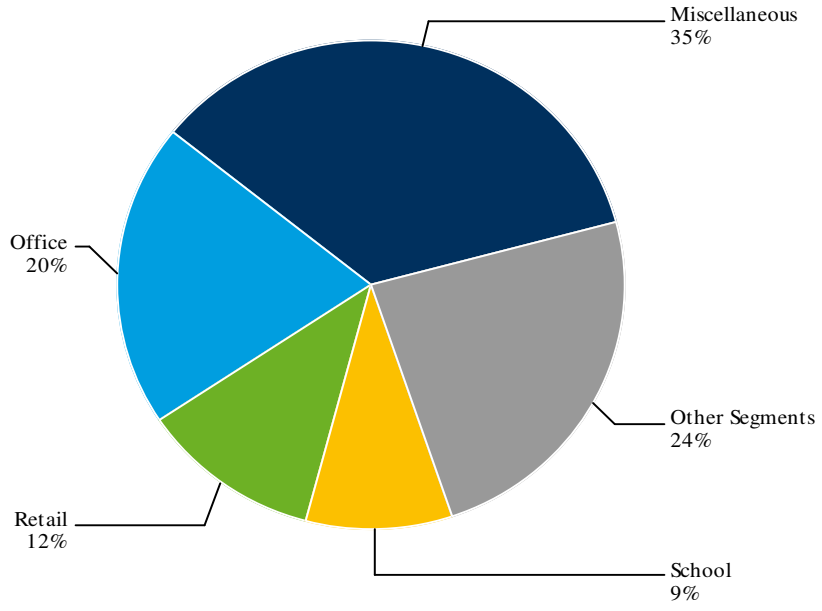
Total: 61 aMW



Note: 'Other Segments' includes:
Restaurant: 4%, Health: 4%, Lodging: 1%

Figure C-3B.8. Baseline Sales 2032 - Utah: Commercial by Segment

Total: 1,064 aMW



Note: 'Other Segments' includes:
Restaurant: 5%, Warehouse: 5%, Health: 4%, Grocery: 4%, Data Center: 4%, Lodging: 3%

APPENDIX C-4. ACHIEVABLE TECHNICAL POTENTIAL PIE CHARTS

Appendix C-4 presents achievable technical potential in 2032 by state, sector, segment, and end use in aMW at generator.

Figure C-4.1. Achievable Technical Potential - California: Residential by Segment

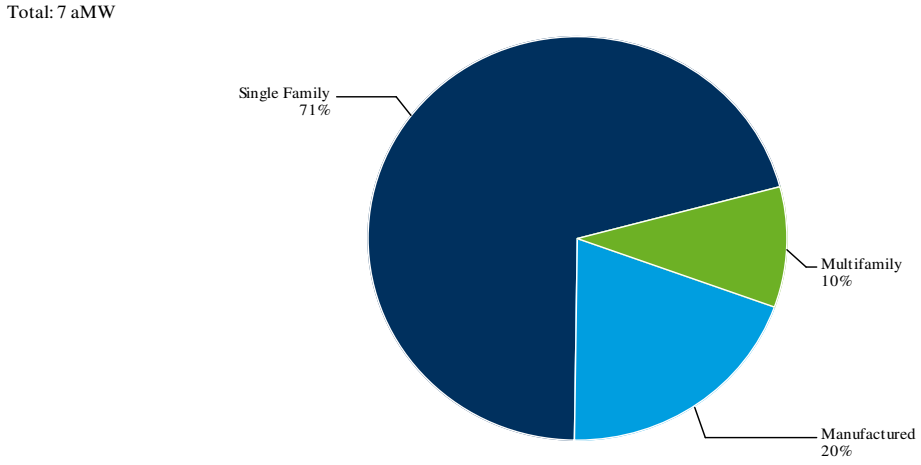

Figure C-4.2. Achievable Technical Potential - Idaho: Residential by Segment

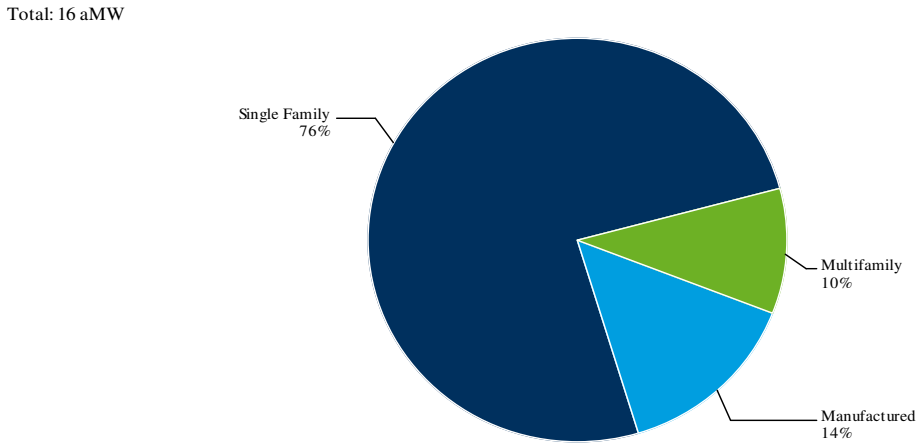

Figure C-4.3. Achievable Technical Potential - Utah: Residential by Segment

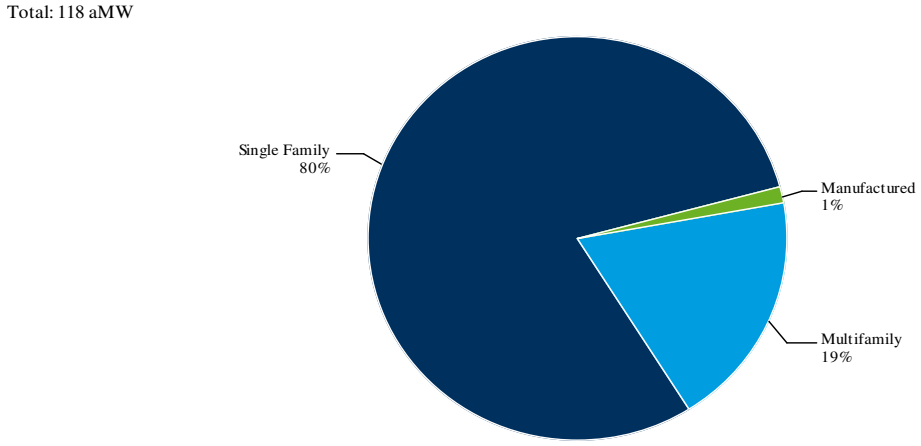

Figure C-4.4. Achievable Technical Potential - Washington: Residential by Segment

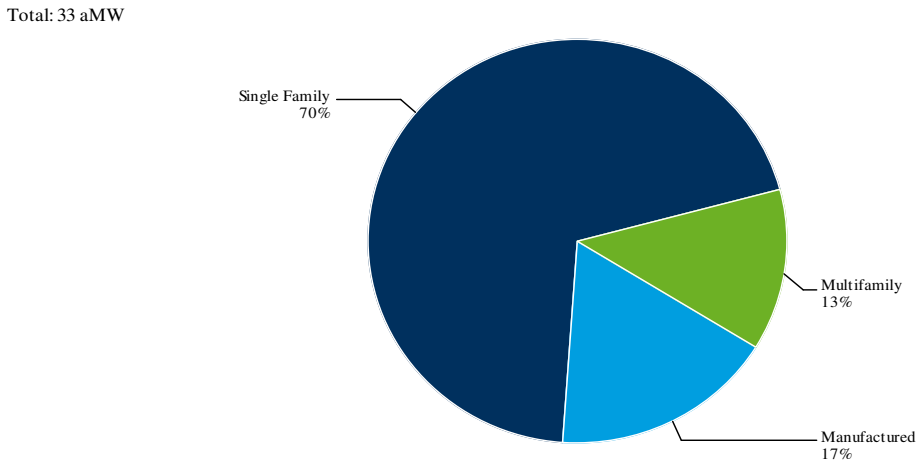

Figure C-4.5. Achievable Technical Potential - Wyoming: Residential by Segment

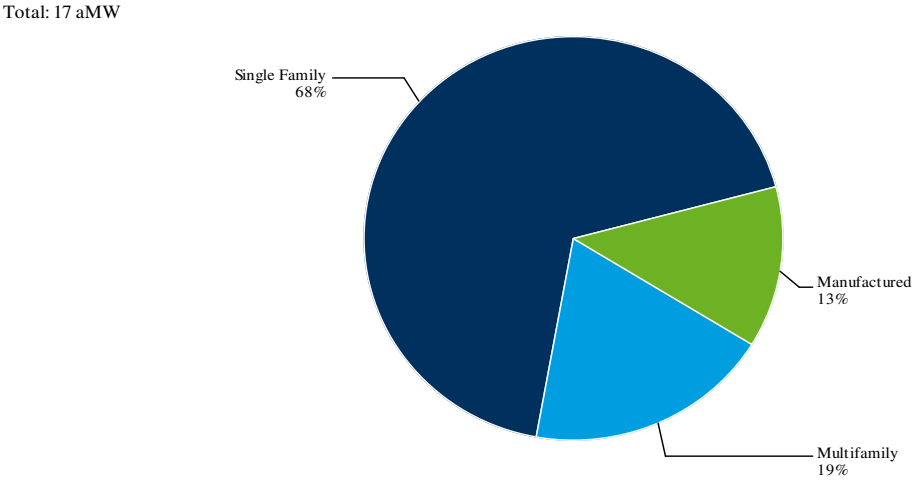

Figure C-4.6. Achievable Technical Potential - California: Commercial by Segment

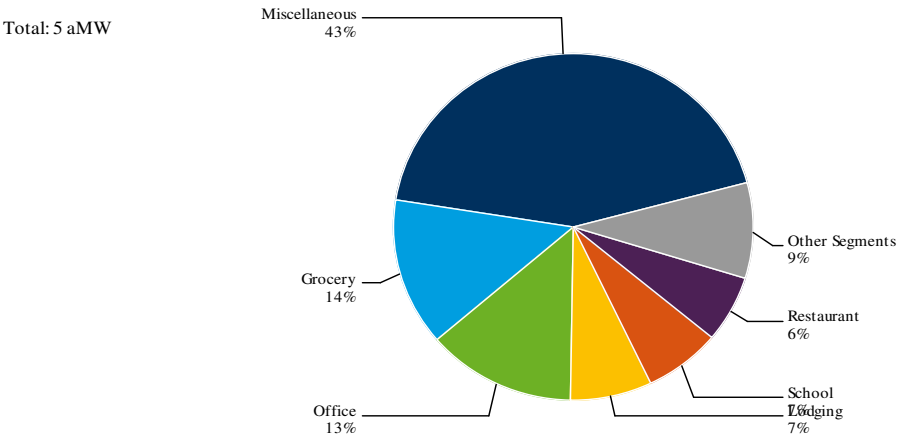
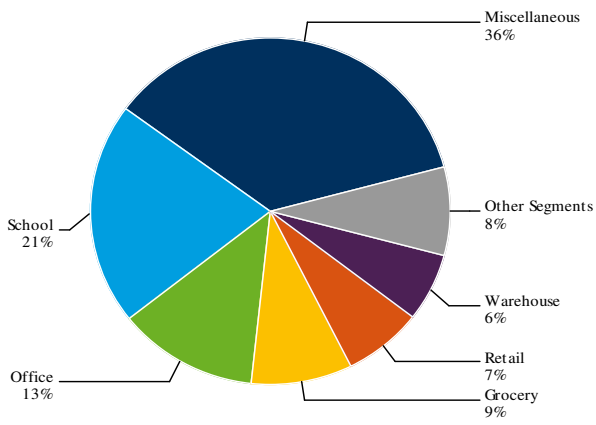


Note: 'Other Segments' includes:
Retail: 4%, Health: 4%, Warehouse: 2%

Figure C-4.7. Achievable Technical Potential - Idaho: Commercial by Segment

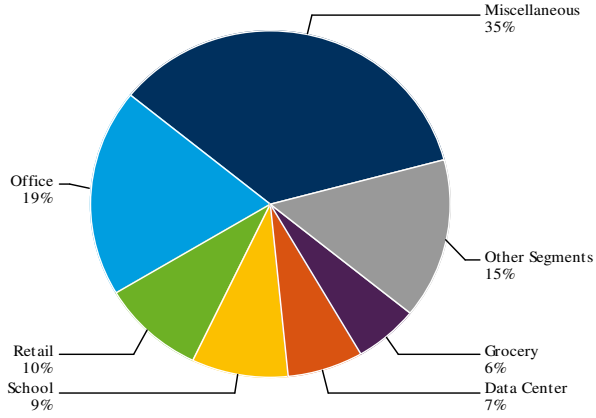
Total: 9 aMW



Note: 'Other Segments' includes:
Restaurant: 4%, Health: 3%, Lodging: 2%

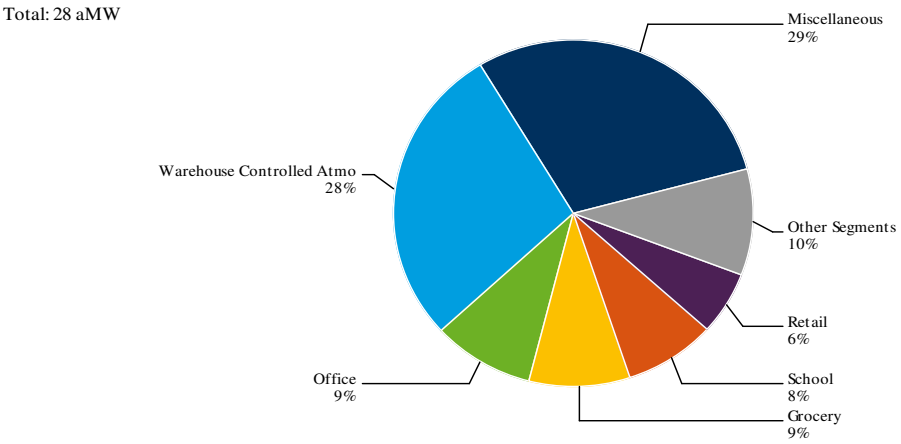
Figure C-4.8. Achievable Technical Potential - Utah: Commercial by Segment

Total: 163 aMW



Note: 'Other Segments' includes:
Restaurant: 4%, Warehouse: 4%, Lodging: 3%, Health: 3%

Figure C-4.9. Achievable Technical Potential - Washington: Commercial by Segment



Note: 'Other Segments' includes:
Restaurant: 4%, Health: 4%, Lodging: 2%, Warehouse: <1%

Figure C-4.10. Achievable Technical Potential - Wyoming: Commercial by Segment

APPENDIX C-5. PACIFICORP MEASURE COMPARISON TO THE ENERGY TRUST OF OREGON

The Energy Trust of Oregon, Inc. (Energy Trust), recently completed a resource assessment[1] of potential energy efficiency and renewable energy measures to provide electricity and natural gas demand-side savings for Oregon consumers by 2030 within the Energy Trust's service territory. Cadmus reviewed descriptions of these Energy Trust measures and compiled a list of the comparable PacifiCorp measure names by state (California, Idaho, Utah, Washington, and Wyoming).

The following three tables present residential, commercial, and industrial measure names. Each table includes the sector, Energy Trust measure name, and PacifiCorp's measure names for each state. Notes in the far right column provide additional detail for certain measures. Irrigation and street lighting are included as part of industrial.[2]

[1] Resource Assessment for Energy Trust of Oregon – Final Report 3/28/11: http://energytrust.org/library/reports/021611_ResourceAssessment.pdf

[2] In this appendix (C-5) industrial, irrigation, and street lighting are all combine into table. In appendix C-2 they are presented in separate tables.

Table C-5.1. Comparison of Energy Trust and PacifiCorp Residential Measure Names

Sector	Energy Trust Measure Name	PacifiCorp Measure Name					Notes
		CA	ID	UT	WA	WY	
Residential	100% LED after 2020	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	
Residential	50% LED after 2020	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	
Residential	AC Tune - up (Z A, Z B)	Tune-up - Central Air Conditioner	Tune-up - Central Air Conditioner	Tune-up - Central Air Conditioner	Tune-up - Central Air Conditioner	Tune-up - Central Air Conditioner	
Residential	Add 16 LED lamps (using CFL base) after 2015	Lighting Specialty Lamp - Premium Efficiency LED	Lighting Specialty Lamp - Premium Efficiency LED	Lighting Specialty Lamp - Premium Efficiency LED	Lighting Specialty Lamp - Premium Efficiency LED	Lighting Specialty Lamp - Premium Efficiency LED	
Residential	Add 16 LED lamps (using incand base) after 2015	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	
Residential	Add 6 LED lamps (using CFL base) after 2015	Lighting Specialty Lamp - Premium Efficiency LED	Lighting Specialty Lamp - Premium Efficiency LED	Lighting Specialty Lamp - Premium Efficiency LED	Lighting Specialty Lamp - Premium Efficiency LED	Lighting Specialty Lamp - Premium Efficiency LED	
Residential	Add 6 LED lamps (using incand base) after 2015	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	
Residential	All LED (from 2020 base) after 2020	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	Lighting General Service Lamp - Premium Efficiency LED	
Residential	Commissioning (HP), Z A, Z B	Quality Installation - Heat Pump	Quality Installation - Heat Pump	Quality Installation - Heat Pump	Quality Installation - Heat Pump	Quality Installation - Heat Pump	
Residential	Common Area Lighting (MF Only)						Multifamily common area was treated in the commercial sector.

Sector	Energy Trust Measure Name	PacifiCorp Measure Name					Notes
		CA	ID	UT	WA	WY	
Residential	Duct Sealing , Z A, Z B, Z C	Duct Sealing and Insulation - Code	Duct Sealing and Insulation - Code	Duct Sealing and Insulation - Code	Duct Sealing and Insulation - Code	Duct Sealing and Insulation - Code	
Residential	E* lighting (18 lamps)						See CFL and LED measures. Measures are considered individually in the study.
Residential	Eco Rated New Manufactured Home						Measures are considered individually in the study.
Residential	Elec ETO Dishwasher	Dishwasher - ENERGY STAR	Dishwasher - ENERGY STAR	Dishwasher - ENERGY STAR	Dishwasher - RTF ENERGY STAR	Dishwasher - ENERGY STAR	
		Dishwasher - Enhanced Efficiency	Dishwasher - Enhanced Efficiency	Dishwasher - Enhanced Efficiency	Dishwasher - RTF Enhanced Efficiency	Dishwasher - Enhanced Efficiency	
Residential	Elec Hi-eff Washer	Clothes Washer - ENERGY STAR	Clothes Washer - ENERGY STAR	Clothes Washer - ENERGY STAR	Clothes Washer - RTF Tier 1	Clothes Washer - ENERGY STAR

APPENDIX C-6. WASHINGTON MEASURES COMPARED TO THE COUNCIL'S 6TH PLAN AND THE REGIONAL TECHNICAL FORUM

In compliance with Chapter 19.285 of the Revised Code of Washington (RCW), Chapter 480-109 of the Washington Administrative Code (WAC), and as described in Volume I of this report, this study employs methodologies consistent with the Northwest Power and Conservation Council's (Council's) 6th Northwest Electric and Conservation Power Plan (6th Plan) to estimate available Class 2 DSM (energy-efficiency) potential. Additionally, Cadmus conducted a thorough review of baseline and measure assumptions used by the Council or by the Regional Technical Forum (RTF); these included costs, savings, applicability, and current saturation. Although this study relies on data specific to PacifiCorp's service territory wherever possible, Council/RTF assumptions were incorporated where appropriate.

Since the completion of the 6th Plan, the RTF has continued to review baseline and measure assumptions. Thus, many of the measures used in the 6th Plan have been updated based on more recent data. Therefore, Cadmus used RTF assumptions where available and 6th Plan assumptions if an RTF update had not been completed as of early July 2012. Comparison to Council/RTF savings assumptions are shown in the following tables.

As part of this multi-state study,[1] measures were mapped, where possible, to RTF and 6th Plan measures. However, not all measure names, measure-efficiency tiers, measure iterations, and measure savings will directly mirror the RTF or 6th Plan. These differences account for changes in federal equipment efficiency standards, the latest version of Washington code(s),[2] and characteristics specific to PacifiCorp's territory, where appropriate. For certain measures, due to the overall complexity of updating the RTF and Council measure savings to current code and standards directly, the measure percent savings were calculated and assumed to be constant. To account for code and standard improvements the equipment consumptions over time were impacted by adjusting the baseline equipment assumptions. This occurred for such measures as "Integrated Building Design," "Low-Flow Showerheads," etc.

Residential Sector

For the residential sector, the Council and RTF use the Simple Energy and Enthalpy Model (SEEM), a building simulation model.[3] Cadmus used SEEM v0.94 to develop estimates of HVAC baseline and measure consumptions (e.g., central air conditioning, heat pumps, and insulation) in single-family, multifamily, and manufactured homes. Model inputs were adjusted for PacifiCorp's territory, thereby customizing parameters such as building square feet and climate zones to match customer-specific data. Thus, the methodology to estimate savings was the same as used by the Council and RTF, but the actual savings differ due to unique

[1] This study covers California, Idaho, Utah, Washington, and Wyoming. Oregon Class 2 DSM potential is assessed in a separate study conducted by the Energy Trust of Oregon.

[2] Washington State Energy Code 2009 Edition was used for this study. The 2012 edition energy code was not enacted at the time the analysis was completed for this study. Other state equipment standards were referenced in this study such as Revised Code of Washington (RCW) for refrigeration equipment minimum efficiency standards.

[3] http://www.nwcouncil.org/energy/rtf/measures/support/SEEM/Default.asp

characteristics of houses within PacifiCorp's service territory compared to Northwest regional averages.[4]

When comparing PacifiCorp measures with the RTF/Council, Cadmus used the most common end-use configuration. For example, there are two categories for PacifiCorp water heating end use is broken into two categories: greater than (GT) 55 gallons and less than or equal to (LE) 55 gallons. Most residential water heaters are less than 55 gallons. Therefore, the Water Heat LE 55 Gallon end use is compared to measure savings with the RTF, as appropriate.

It is also worth noting that one PacifiCorp measure, "Duct Sealing and Insulation – RTF," is incorrectly named and includes only duct insulation savings but not duct sealing savings. RTF measure tables do not include claimed savings for duct insulation; therefore, this PacifiCorp measure is not comparable to the RTF.

The major differences for residential sector are measures developed by SEEM modeling, measures referencing PacifiCorp evaluation results, and updates reflecting recent ENERGY STAR® specifications and/or code and standards. These are key differences in the SEEM modeling.

- PacifiCorp developed SEEM models using version of SEEM v.94, while current RTF workbooks are based on SEEM v.92.
- For most measures, RTF workbooks provide only the savings results without including the input or outputs from SEEM. Because of this, PacifiCorp developed the models independently.
- There are different input assumptions when compared to the RTF, including weather location, building characteristics such as building square footage, equipment efficiencies, and infiltration assumptions. The inputs used are specific to PacifiCorp's territory.

These differences and building assumptions contribute to different savings values for PacifiCorp compared to the RTF. Details for the residential sector are shown in Table C-6.1.

Commercial Sector

For the commercial sector, RTF and Council measure savings were scaled up from a per-measure level to a total building level by applying the number of units specific to each building type. For example, RTF low-flow showerhead savings are presented on a per-showerhead basis, whereas this study calculates average building-level savings by multiplying per-showerhead savings by the number of showers per building (by market segment). RTF and Council measure workbooks may contain multiple savings values based on the capacity, efficiency, fuel type, climate zone, etc. Therefore, weighted averages were used to develop a single savings value that is specific to PacifiCorp's service territory, where possible.

For the commercial lighting measures, the input assumptions were derived from the 2008 Northwest Commercial Building Stock Assessment (CBSA) rather than the 6th Power Plan, where applicable. The 2008 CBSA dataset was used as the 6th Plan assumptions are based on the previous CBSA with the 1995 to 2001 vintage range. Additionally, the lighting technology types

[4] The Northwest region includes Idaho, Oregon, Washington, and Western Montana.

in the 2008 CBSA have greater granularity than the 6th Plan, which allows for additional measure and baseline iterations to compete for potential. The main inputs taken or inferred from the CBSA dataset include the existing lighting power densities (LPD), the saturations of customers above the 2009 WA Code LPD, and wattage distributions by technology type.

In addition, there are some measures that exist in the residential sector but not in the commercial sector. For example, residential-sized clothes washers and dishwashers are applied in commercial buildings, but no RTF workbook exists. In these cases, we used the residential sector workbook and adjusted the number of cycles to reflect how these units are used in commercial buildings. In two cases the Council measures "Covered Parking Lighting" and "Exterior Building Lighting" had incomplete workbooks and therefore had calculated no overall potential. These two measures were not included in the final comparison within this appendix. PacifiCorp's analysis used as much applicable data within Council's workbooks to inform the measure inputs for this study.

The major differences between commercial RTF/Council savings values and those developed for Washington in this assessment are driven by the use of PacifiCorp evaluation results, Washington building codes and/or efficiency standards, updates reflecting recent changes in ENERGY STAR specifications, and current Northwest data (such as CBSA). See Table C-6.2 for a measure-level comparison of savings values and explanations of key drivers of differences, where present.

Industrial, Irrigation, Agriculture, and Street Lighting Sectors

For the industrial sector, the end use savings assumptions relied heavily on the Council's industrial analysis in the 6th Plan. Updates were made based on recent energy savings assumptions from the U.S. Department of Energy's (DOE) Industrial Assessment Center (IAC) Database, Northwest Energy Efficiency Alliance (NEEA) 2011 Market Progress Evaluation Report, PacifiCorp's Market Characterization studies (2011 and 2012), and other industrial sources. Primary differences in industrial savings between this study and the region are driven by PacifiCorp specific mix of facility types.

In the agriculture sector, neither the Council nor the RTF include a majority of the measures analyzed in this assessment. Only three measures could be compared directly: "VFDs - Potato / Onion Shed," "High-efficiency Livestock Waterers," and "VFDs for Dairy Vacuum Pumps."

In the irrigation sector, there was variation in how measures were grouped and analyzed by the Council or the RTF.[5] However, savings from these measures can be broadly classified as resulting from 1) reduced water flow (i.e., repair leaks and replace worn nozzles, 2) improved plant efficiency (i.e., better motors, pumps, speed control, distribution system improvements), and 3) improved system scheduling (i.e., scientific irrigation scheduling – SIS). There is also significant variation in how these measures interact with each other. For these reasons, this study grouped the savings opportunities into one aggregate measure that incorporates the three types of savings described above. The PacifiCorp savings is an average of savings across these measure technologies based on PacifiCorp's Market Characterization Study.

[5] The irrigation measure comparison was not included in the C-6 industrial appendix document and only mentioned here. The PacifiCorp "Irrigation System Improvements" measure was comparable to the RTF workbook called "AgIrrigationHardware_v2_2".

The industrial comparison table, excluding street lighting, is shown in Table C-6.3.

The street lighting sector relied on PacifiCorp's current equipment inventory, replacement options and turnover rates, equipment costs and operational and maintenance saving. Measure and baseline efficiencies are territory-specific based on PacifiCorp's data and differ from Council assumptions in some cases (see Table C-6.4). In addition, the Council assumes slightly lower annual operating hours for street lighting compared to PacifiCorp data.

Table C-6.1. Residential Measure-Level Comparison

PacifiCorp					RTF or 6th Power Plan		PacifiCorp Savings Value per	RTF/6th Plan Savings	Savings Unit	Notes
Measure Name	Measure Efficiency	Baseline Efficiency	Segment	End Use	Measure	Workbooks Analyzed				
Ceiling Insulation (WA) - Above Code	R-49 (Above WA Code - Multi Family Homes Only)	R-38 (WA Code - Multi Family Homes Only)	Multifamily	Heat Pump	RTF	ResWXMF_v2_2	0.02	0.06	Per Sqft of Ceiling Insulation	Differences in multifamily building characteristics such as building square footage, ceiling square footage, equipment efficiencies, and infiltration assumptions impact savings. In addition, savings modeled using SEEM v94 instead of RTF's SEEM v92. Model used Yakima weather for PacifiCorp territory.
Ceiling Insulation (WA) - Code	R-49 (WA Code - Single Family and Manufactured Homes Only)	R-11 (Existing Insulation)	Manufactured	Heat Pump	RTF	ResMHWx_v3_1	0.40	0.44	Per Sqft of Ceiling Insulation	RTF measure is R-0 to R-30. RTF savings for R-19 to R-30 is 0.18 kWh per Sqft. RTF has no comparable measure iteration with R-11 to R-49 similar to PacifiCorp. PacifiCorp existing conditions are based on PacifiCorp's Residential Energy Decision Survey.
Ceiling Insulation (WA) - Code	R-38 (WA Code - Multi Family Homes Only)	R-11 (Existing Insulation)	Multifamily	Heat Pump	RTF	ResWXMF_v2_2	0.22	0.27	Per Sqft of Ceiling Insulation	Based on existing R-value while RTF baseline is R-19. PacifiCorp existing conditions are based on PacifiCorp's Residential Energy Decision Survey. Differences in multifamily building characteristics such as building square footage, ceiling square footage, equipment efficiencies, and infiltration assumptions impact the savings. Model used Yakima weather for PacifiCorp territory in Washington.
Ceiling Insulation (WA) - Code	R-49 (WA Code - Single Family and Manufactured Homes Only)	R-11 (Existing Insulation)	Single Family	Heat Pump	RTF	ResSFWx_v2_4	0.26	0.43	Per Sqft of Ceiling Insulation	Based on existing R-value while RTF baseline is R-19. PacifiCorp existing conditions are based on PacifiCorp's Residential Energy Decision Survey. Differences in single family building characteristics such as building square footage, ceiling square footage, equipment efficiencies, and infiltration assumptions impact the savings. Model used Yakima weather for PacifiCorp territory in Washington.
Clothes Washer - RTF Tier 1	RTF Tier 1 Clothes Washer - MEF 2.05 and WF 4.97 (Electric DHW & Dryer)	RTF Market Standard 2011 Clothes Washer- MEF 1.94 and WF 7.0 (Electric DHW & Dryer)	Single Family	Water Heat Le 55 Gal	RTF	ResClothesWashersSF_v2_1	74.88	76.00	Per Clothes Washer	RTF workbook v2.1 did not include ENERGY STAR 2012 specification updates. Cadmus made adjustments to MEF ranges to reflect 2012 ES specifications. Savings calculated using PacifiCorp evaluation results. RTF savings are from the category "MEF 2.00 to 2.19 Clothes Washer - Electric DHW, Electric Dryer".
Clothes Washer - RTF Tier 2	RTF Tier 2 Clothes Washer - MEF 2.28 and WF 4.14 (Electric DHW & Dryer)	RTF Market Standard 2011 Clothes Washer- MEF 1.94 and WF 7.0 (Electric DHW & Dryer)	Single Family	Water Heat Le 55 Gal	RTF	ResClothesWashersSF_v2_1	111.67	133.00	Per Clothes Washer	RTF workbook v2.1 did not include ENERGY STAR 2012 specification updates. Cadmus made adjustments to MEF ranges to reflect 2012 ES specifications. Savings calculated using PacifiCorp evaluation results. RTF savings are from the category "MEF 2.20 to 2.45 Clothes Washer - Electric DHW, Electric Dryer".

PacifiCorp					RTF or 6th Power Plan		PacifiCorp Savings Value per	RTF/6th Plan Savings	Savings Unit	Notes

Heat Pump Water Heater - RTF Tier 2	RTF Tier 2 Heat Pump Water Heater > 55 GAL - EF 2.08	Federal Standard 2004 Storage Water Heater > 55 GAL - EF 0.87	Single Family	Water Heat GT 55 Gal	RTF	Res_HPWH_v1_2	1,709.77	,762-2,009	Per Water Heater	RTF savings depends on home heating type and location. RTF sizing has two ranges: 50-75 gal and greater than 75 gallons. These sizes do not fit the assumed size division for PacifiCorp that is based on the federal standard division of size. Savings calculated using RTF assumptions and methodology.
Heat Pump Water Heater - RTF Tier 2	RTF Tier 2 Heat Pump Water Heater ≤ 55 GAL - EF 2.08	Federal Standard 2004 Storage Water Heater ≤ 55 GAL - EF 0.92	Single Family	Water Heat LE 55 Gal	RTF	Res_HPWH_v1_2	1,543.90	,762-1,824	Per Water Heater	RTF savings depends on home heating type and location. RTF sizing ranges from 50 to 75 gallons is used to compare to PacifiCorp savings for sizes less than 55 gallons based on the federal standard division of size. Savings calculated using RTF assumptions and methodology and an average of heating types.
Lighting General Service Lamp - High Efficiency CFL	High Efficiency General Service Lamp --CFL	Standard General Service Lamp - Incandescent	Single Family	Lighting Standard	RTF	ResCFLLighting_v2.1	26.69	23.36	Per Lamp	RTF analysis (direct install) includes factors such as 4% removal rate that are not included in potential study. WHF has been adjusted to Yakima, WA.
Lighting Specialty Lamp - High Efficiency CFL	High Efficiency Specialty Lamp -CFL	Standard Specialty Lamp - Incandescent	Single Family	Lighting Interior Specialty	RTF	ResSpecialtyLighting_v1.2	25.96	23.00	Per Lamp	RTF analysis (direct install) includes factors such as 4% removal rate that are not included in potential study. WHF has been adjusted to Yakima, WA.
Low-Flow Showerhead - RTF Tier 1	RTF Tier 1 Low-Flow Showerhead - 2.0 GPM (In Situ - 1.8 GPM)	RTF Federal Standard 1994 Showerhead - 2.5 GPM (In Situ - 2.2 GPM)	Single Family	Water Heat Le 55 Gal	RTF	ResShowerheads_v2.1	139.56	139.00	Per Showerhead	The RTF value given corresponds to the category "Any Showerhead".
Low-Flow Showerhead - RTF Tier 2	RTF Tier 2 Low-Flow Showerhead - 1.75 GPM (In Situ - 1.58 GPM)	RTF Federal Standard 1994 Showerhead - 2.5 GPM (In Situ - 2.2 GPM)	Single Family	Water Heat Le 55 Gal	RTF	ResShowerheads_v2.1	222.79	222.00	Per Showerhead	The RTF value given corresponds to the category "Any Showerhead".
Low-Flow Showerhead - RTF Tier 3	RTF Tier 3 Low-Flow Showerhead - 1.5 GPM (In Situ - 1.35 GPM)	RTF Federal Standard 1994 Showerhead - 2.5 GPM (In Situ - 2.2 GPM)	Single Family	Water Heat Le 55 Gal	RTF	ResShowerheads_v2.1	309.43	307.00	Per Showerhead	The RTF value given corresponds to the category "Any Showerhead".
Microwave - High Efficiency	High Efficiency Microwave	Standard Microwave	Single Family	Microwave	6th PP	ResOven_MicrowaveFY09v1_0	26.99	10.00	Per Microwave	Updated 6th PP methodology using more recent DOE data
Monitor - ENERGY STAR	ENERGY STAR Monitor	Standard Monitor	Single Family	Monitor	6th PP	PNWConsumerElectronicsSupplyCurve_6thPlanv1_7	14.19	33 - 55	Per Monitor	Updated analysis to use more current ENERGY STAR assumptions

Quality Installation - Heat Pump	Quality Installation of Heat Pump - Commissioning, Controls, and Proper Sizing	Standard Installation of Heat Pump	Manufactured	Heat Pump	RTF	ResMHPTCSCommissioningControlsSizing_v2_4	118.57	836.31	Per Heat Pump	The RTF includes duct improvement as part of PTCS protocol. Duct improvement are considered as an individual measure in this potential study, therefore to avoid double counting this improvement is not included in this measure for PacifiCorp. In addition, the RTF has recently recommended that "*this measure category should be classified under review in order to implement new ventilation and infiltration inputs using the updated SEEM (v0.94) module. This will require new simulation inputs to be developed and run in the updated SEEM program. There will be at least 150 new SEEM runs (5 control strategies x 2 HVAC equipment types ("Lo" and "Hi") x 3 prototype houses x 5 weather zones) but the update will not involve any new primary data collection. It will, however, require a change in the method in how the current SEEM outputs are chosen and used to form the UES. Once the recommended updates to the UES values have been implemented, it can be returned to the classification active*." Other differences are in building characteristics such as building square footage, location, and envelope assumptions (specific to PacifiCorp based on Energy Decision Surveys where applicable). In addition, savings modeled using SEEM v94 instead of RTF's SEEM v92. Model used Yakima weather for PacifiCorp territory.

Case Replacement Low Temp	Case Replacement Low Temp	No replacement	Grocery	Refrigeration	6th PP	PC-Grocery-6P-D3	1,430	977	Per Low Temp Case Replacement	The Sixth Power Plan measures 'Case Replacement Low Temp' and 'Case Replacement Med Temp' have a savings of 977 kWh and 83 kWh, respectively. Additionally, the Sixth Power Plan measure has the measure 'Case Electronically Commutated Motor' with a savings of 1,018 kWh. Because the savings are greater for an ECM upgrade than a case replacement, it was assumed that the Sixth Power Plan case replacement measures do not include an ECM upgrade. The RTF has evaluated ECM case fans upgrades but not entire case replacements since the publication of the Sixth Plan. This PacifiCorp case replacement measure includes an ECM and therefore the savings include the RTF ECM savings (452.7 kWh) . The costs were also adjusted to account for the additional ECM costs ($110). This data is from the RTF measure "Grocery - ECMs for Display Cases" and workbook "ComGroceryDisplayCaseECMs_v2_1.xlsm".

Case Replacement Med Temp	Case Replacement Med Temp	No replacement	Health	Refrigeration	6th PP	PC-Grocery-6P-D3	536	83	Per Med Temp Case Replacement	The Sixth Power Plan measures 'Case Replacement Low Temp' and 'Case Replacement Med Temp' have savings of 977 kWh and 83 kWh, respectively. Additionally the Sixth Power Plan measure has the measure 'Case Electronically Commutated Motor' with a savings of 1,018 kWh. Because the savings are greater for an ECM upgrade than a case replacement, it was assumed that the Sixth Power Plan case replacement measures do not include an ECM upgrade. The RTF has evaluated ECM case fans upgrades but not entire case replacements since the publication of the Sixth Plan. This PacifiCorp case replacement measure includes an ECM and therefore the savings include the RTF ECM savings (452.7 kWh) . The costs were also adjusted to account for the additional ECM costs ($110). This data is from the RTF measure "Grocery - ECMs for Display Cases" and workbook "ComGroceryDisplayCaseECMs_v2_1.xlsm"

Computer ENERGY STAR	ENERGY STAR Computer	Standard non-ENERGY STAR Computer	Grocery	Computers	6th PP	PNWConsumerElectronicsSupplyCurve_6thPlanv1_7	105	177	Per Computer	Measure consumption is based on the 2011 ENERGY STAR calculator for office equipment, assuming a equal split of residential and commercial units. The ENERGY STAR power consumptions are the same between residential and commercial, but vary in the amount of time turned off and in sleep mode. The Sixth Plan looks at the four computer categories (A, B, C, and D) and calculates a weighted average based on market sales data. The Sixth Power plan measure consumptions no longer meet the current ENERGY STAR Version 5.0 Energy Efficiency Requirements for computers, which became effective July 1, 2009.

The Sixth Plan looks at the four computer categories (A, B, C, and D) and calculates a weighted average based on market sales data. The Sixth Power plan measure consumptions no longer meet the current ENERGY STAR Version 5.0 Energy Efficiency Requirements for computers, which became effective July 1, 2009.

Lighting Interior - Screw Base CFL - Above Standard	Above Standard Screw Base Interior CFL Lighting	Standard Interior Building Screw Base Lighting	School	Lighting Interior Screw Base	6th PP	PC-LPDPackage-6P-D16	0.28	0.10	Per Square Foot	The Sixth Power Plan and PacifiCorp savings represent a combination of various lamp lengths and lamps per fixture for the lighting technology T5 High Output. Natural replacement measures were compared to PacifiCorp values. The PacifiCorp values represent a combination of various lamp lengths and lamps per fixture for the lighting technology T5 High Output. The PacifiCorp measure savings include the technical feasibility factor to allow a comparison to the Sixth Plan LPD Package workbook values, which include a measure applicability factor. The saturation of lighting technologies have been updated with the 2008 Commercial Building Stock Assessment (CBSA), while the Sixth Plan does not include these saturation data.

Measure Name	Measure Efficiency	Baseline Efficiency	Segment	End Use	Measure	Workbooks Analyzed				
Low Pressure Distribution Complex HVAC	Low Pressure Distribution Complex HVAC	VAV/CV	Health	Ventilation And Circulation	6th PP	PC-LowPressureDist-6P-D1	0.75	0.90	Per Building Sqft	This measure is broken out by the following building types: Large Office, Medium Office, Anchor, K-12, University, Other Health, and Other. The ventilation savings are based on the average of the Underfloor Air Distribution (UFAD) and Dedicated Outside Air System (DOAS) measure iterations. The savings vary based on building type due to the Sixth Power Plan assumptions made for the ventilation, cooling and heating end use consumptions. Due to a misclassification, the PacifiCorp building types for Health and Miscellaneous were given the more conservative savings value of 0.75 rather than 0.9 kWh per square foot.

New Construction Integrated Bldg Design	Design team and EE Construction - HVAC	Standard Design	Large Office	Heat Pump	6th PP	PC-IntDesign-6P-D1	0.43	1.06	Per Building Sqft	Integrated Design input assumptions were pulled from the Sixth Power Plan's Integrated Design workbook which referenced ETO program results. The ETO data was used instead of the Sixth Plan workbooks (LPD Package, Top Daylighting, Perimeter Daylighting Controls Advanced, Lighting Controls Interior, ECM on VAV Boxes, Premium HVAC Equipment, Glass, Package Roof Top Optimization and Repair, Variable Speed Chiller, Controls Commission Complex HVAC, Evaporative Assist Cooling, Low Pressure Distribution Complex HVAC, and Demand Control Ventilation) to avoid double counting. The results were weighted for each building type. This weighted savings was applied to the PacifiCorp lighting and HVAC end uses by using a consumption distribution specific to each building type. Since the development of the Sixth Plan workbooks, Washington code and federal standards have improved, which impact the claimed savings. These impacts are captured in the PacifiCorp equipment EUIs, which account for code and standard changes through baseline efficiency assumptions and equipment turnover.

New Construction Integrated Bldg Design	Design team and EE Construction - HVAC	Standard Design	Restaurant	Ventilation And Circulation	6th PP	PC-IntDesign-6P-D1	0.49	0.91	Per Building Sqft	Integrated Design input assumptions were pulled from the Sixth Power Plan's Integrated Design workbook which referenced ETO program results. The ETO data was used instead of the Sixth Plan workbooks (LPD Package, Top Daylighting, Perimeter Daylighting Controls Advanced, Lighting Controls Interior, ECM on VAV Boxes, Premium HVAC Equipment, Glass, Package Roof Top Optimization and Repair, Variable Speed Chiller, Controls Commission Complex HVAC, Evaporative Assist Cooling, Low Pressure Distribution Complex HVAC, and Demand Control Ventilation) to avoid double counting. The results were weighted for each building type. This weighted savings was applied to the PacifiCorp lighting and HVAC end uses by using a consumption distribution specific to each building type. Since the development of the Sixth Plan workbooks, Washington code and federal standards have improved, which impact the claimed savings. These impacts are captured in the PacifiCorp equipment EUIs, which account for code and standard changes through baseline efficiency assumptions and equipment turnover.

Refrigerator - RTF Tier 1 (ENERGY STAR)	RTF Tier 1 (ENERGY STAR) Refrigerator	RTF Market Standard Refrigerator	Grocery	Refrigerators	RTF	ResRefrigerators_v2_1	37	37	Per Refrigerator	RTF and PacifiCorp savings represent the weighted average based on the RTF claimed market share of refrigerator configurations. CEE Tier 1 is ENERGY STAR. The ENERGY STAR value in the RTF encompasses all refrigerators above the ENERGY STAR standard. CEE Tier 1 (RTF Tier 1) includes only models between the ENERGY STAR (CEE Tier1) standard and CEE Tier 2 standard. This is evident in the RTF in that a "ENERGY STAR Refrigerator" consumes less energy than the "CEE Tier 1 Refrigerator". For the purpose of this potential study we have considered each of the three tiers incrementally, ENERGY STAR/CEE Tier 1, CEE Tier 2, & CEE Tier 3 (RTF Tier 1, 2, & 3). Note that the supposed fourth tier is simply an average of the other three tiers.

Streetlight	LED 100 WATT EQUIVALENT		LED 60W	HPS 100W	PC-StreetRoadway-6P-D2		252.5	kWh Per LED Streetlight	LED replacement wattage not considered. PacifiCorp LED wattage based on program data of actual equipment wattages.
Streetlight	LED 150 WATT EQUIVALENT	LED 106W	LED 111W	HPS 150W	PC-StreetRoadway-6P-D2	245.9	248.4	kWh Per LED Streetlight	Slight difference in annual operating hours (4140 hrs for 6th Plan versus 4167 hrs for PC) and baseline wattage (121W for 6th Plan versus 125W for PC).
Streetlight	LED 150 WATT EQUIVALENT		LED 117W	HPS 150W	PC-StreetRoadway-6P-D2		223.6	kWh Per LED Streetlight	LED replacement wattage not considered. PacifiCorp LED wattage based on program data of actual equipment wattages.

APPENDIX D

APPENDIX D-1. SUPPLEMENTAL RESOURCE SUPPLEMENT: COMBINED HEAT AND POWER

Appendix D-1 provides the details behind the potential estimates for combined heat and power (CHP).

Table D-1.1. Total CHP Market Potential by Year

	Installed Capacity (MW)	Annual Energy (aMW)
2013	17	9
2014	34	17
2015	50	26
2016	67	35
2017	84	43
2018	101	52
2019	117	60
2020	134	69
2021	151	77
2022	168	86
2023	182	93
2024	197	100
2025	211	107
2026	226	114
2027	241	121
2028	255	128
2029	270	135
2030	284	142
2031	298	149
2032	312	155

Table D-1.2. CHP Market Potential by State and Configuration – 2032

System Type	Projected Incremental Installed System Capacity Operating in 2032 (MW)						
	CA	ID	OR	UT	WA	WY	Total
Natural Gas	4	12	25	184	32	26	283
30–99 kW	*0.4*	*0.8*	*1.6*	*4.6*	*1.0*	*1.1*	*10*
100-199 kW	*0.8*	*2.3*	*3.7*	*23.5*	*4.6*	*4.0*	*39*
200-499 kW	*0.9*	*2.6*	*5.5*	*44.7*	*9.1*	*5.8*	*69*
500–999 kW	*0.2*	*0.6*	*2.9*	*28.9*	*6.1*	*2.6*	*41*
1–4.9 MW	*1.5*	*3.4*	*8.2*	*62.0*	*11.4*	*8.3*	*95*
5 MW+	*0.0*	*2.0*	*3.2*	*20.6*	*0.0*	*3.8*	*30*
Industrial Biomass	1.0	0.2	11.0	3.2	2.4	0.5	18
Biogas	0.1	1.5	2.1	3.5	0.5	2.8	10
Total	**5**	**13**	**38**	**191**	**35**	**29**	**312**

Table D-1.3. California CHP Market Potential – Natural Gas – Reciprocating Engines

	Installed Capacity (MW)	Annual Energy (aMW)	Net Heat Rate (MMBtu/MWh)	Levelized Cost ($/kWh)
2013	0.15	0.06	4.7	$0.08
