November 6, 2019

Mr. Keo Chen ACT Enviro, Inc. PO Box 430 Troutdale, OR 97060

SUBJECT: Intent to Dispose of Former Water Supply Well Decommissioning Wastes Generated by NW Natural, Gasco Property, 7900 NW St. Helens Road, Portland, Oregon

HAI Project No.: 2708

Dear Mr. Chen:

At the request of NW Natural, Hahn and Associates, Inc. (HAI) is coordinating the disposal of certain wastes generated during the decommissioning of water supply well "MULT 802", located at the NW Natural Gasco property. Decommissioning activities were performed between May and August 2019, with HAI overseeing and documenting the activities. HAI collected multiple characterization samples of the waste that are deemed to be representative of the materials to be disposed. This profile package, inclusive of analytical testing results, is to be used to facilitate the disposal of the wastes that were generated during the well decommissioning activities.

Wastes removed from the well during decommissioning consisted of tar and pitch material which are black with a minor granular component and are solid to highly viscous at ambient temperatures. These wastes, along with minor soils, plastic, and other debris are contained in 23 55-gallon steel drums.

Characterization samples representative of the tar and pitch wastes were collected over the course of the decommissioning work. A description of samples deemed representative of the waste is presented below.

- <u>2708-190513-COMP1:</u> chemical concentrations detected are deemed representative of the hard, black, solid, tar and pitch, component of the waste.
- <u>2708-190520-006 and 2708-190521-007</u>: chemical concentrations detected are deemed representative of the viscous putty-like tar, component of the waste.
- <u>2708-190522-011:</u> chemical concentrations detected are deemed representative of the softer granular solid tar, component of waste.

Characterization samples were provided under chain-of-custody to Apex Laboratories, LLC of Tigard, Oregon. The following analytical parameters were tested in one or more of the identified characterization samples.

- Total cyanide by American Standard of Testing and Materials (ASTM) Method D7511-12;
- Total metals by Environmental Protection Agency (EPA) Method 6020A;

- Total petroleum hydrocarbons (TPH): diesel- and oil-range by Northwest Method (NW) TPH-Dx and gasoline-range by NWTPH-Gx;
- Volatile organic compounds (VOCs) by EPA 8260C;
- Toxicity Characteristic Leaching Procedure (TCLP) VOCs by EPA Method SW1311;
- Semi-volatile organic compounds (SVOCs) by EPA Method 8270D.
- Total cyanide by American Standard of Testing and Materials (ASTM) Method D7511-12;
- Total metals by Environmental Protection Agency (EPA) Method 6020A;
- Viscosity, Density, and Specific Gravity by ASTM Methods D4052 and D7042 (Triton Analytics Corp).

Analytical testing results are tabulated on Tables 1 through 5 which are included as Attachment 2. Full laboratory documentation related to these analyses are included as Attachment 3.

These decommissioning wastes were not generated within an area where impacts potentially attributable to a Resource Conservation and Recovery Act (RCRA) listed waste are anticipated, and as such the data are not subject to evaluation with regard to a potential listed RCRA hazardous waste.

Benzene was detected in representative samples of the waste material at concentrations ranging from 55.4 milligrams per kilogram (mg/kg) to 164 mg/kg. Toxicity Characteristic Leaching Procedure (TCLP) testing detected leachable levels of benzene in two samples at concentrations of 0.72 milligrams per liter (mg/L) and 3.15 mg/L, which exceed the RCRA TC value of 0.5 mg/L. Therefore, the generated waste will maintain a D018 waste code (benzene) and will be managed and disposed of as a hazardous waste.

Based on the waste characterization testing results and as described in the attached waste profile CH1929826, it is requested that Clean Harbors, Inc. approve of the incineration of these wastes as D018 hazardous waste at the RCRA Subtitle C permitted Clean Harbors, Inc. Aragonite Incineration Facility located in Dugway, Utah.

Completed Clean Harbors Inc. Hazardous Waste Profile forms (Attachment 1), data summary tables (Attachment 2), and the Apex Laboratories Analytical reports (Attachment 3), are enclosed for your information.

Please contact the undersigned or Rob Ede of HAI with any questions.

Sincerely,

Ben Uhl, R.G.

Sr. Field Manager

If yes, describe, including dimensions:

DOES THIS WASTE CONTAIN ANY METALS IN POWDERED OR OTHER FINELY DIVIDED FORM?

✓ NO YES

DOES THIS WASTE CONTAIN OR HAS IT CONTACTED ANY OF THE FOLLOWING; ANIMAL WASTES, HUMAN BLOOD, BLOOD PRODUCTS, BODY FLUIDS, MICROBIOLOGICAL WASTE, PATHOLOGICAL WASTE, HUMAN OR ANIMAL DERIVED SERUMS OR PROTEINS OR ANY OTHER POTENTIALLY INFECTIOUS MATERIAL?

YES

I acknowledge that this waste material is neither infectious nor does it contain any organism known to be a threat to human health. This certification is based on my knowledge of the material. Select the answer below that applies:

The waste was never exposed to potentially infectious material.

YES YES

NO NO

Chemical disinfection or some other form of sterilization has been applied to the waste.

### Notes:

1 = Characteristic Hazardous Waste Level (40 CFR 261 Subpart C)

bgs = below ground surface

**bold** = detected concentration

Bold and Yellow = Detected concentration exceeds EPA Toxicity Level

EPA = Environmental Protection Agency

J = estimated concentration

mg/L = milligrams per liter ppm = parts per million

TCLP = Toxicity Characteristic Leaching Procedure

U = not detected

VOCs = volatile organic compounds

"-" = not tested

RE: A9E0508 - Mult 802 Decommissioning - 2708-60F

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A9E0508, which was received by the laboratory on 5/15/2019 at 12:35:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: <a href="mailto:pnerenberg@apex-labs.com">pnerenberg@apex-labs.com</a>, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of final reporting, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

Cooler #1

#### **QUALIFIER DEFINITIONS**

# Client Sample and Quality Control (QC) Sample Qualifier Definitions:

# Apex Laboratories

| ex Laborat | <u>ories</u>  |
|------------|---|
| A-01       | Reporting limit raised due to possible lab contamination.   |
| В          | Analyte detected in an associated blank at a level above the MRL. (See Notes and Conventions below.)  |
| B-02       | Analyte detected in an associated blank at a level between one-half the MRL and the MRL. (See Notes and Conventions below.)   |
| CN_I       | Cyanide Interference Challenge Solution. No Cyanide is present in spike solution. Results are valid if Non Detect (No Cyanide detected.)  |
| COMP       | Sample is a composite of discrete samples. See prep information for details.  |
| E-05       | Estimated Result. Initial Calibration Verification (ICV) failed high. No affect on non-detect results.  |
| F-17       | No fuel pattern detected. The Diesel result represents carbon range C12 to C24, and the Oil result represents >C24 to C40.  |
| M-05       | Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.  |
| Q-01       | Spike recovery and/or RPD is outside acceptance limits.   |
| Q-03       | Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.   |
| Q-04       | Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.   |
| Q-05       | Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.  |
| Q-16       | Reanalysis of an original Batch QC sample.  |
| Q-17       | RPD between original and duplicate sample is outside of established control limits.   |
| Q-18       | Matrix Spike results for this extraction batch are not reported due to the high dilution necessary for analysis of the source sample.   |
| Q-29       | Recovery for Lab Control Spike (LCS) is above the upper control limit. Data may be biased high.   |
| Q-31       | Estimated Results. Recovery of Continuing Calibration Verification sample below lower control limit for this analyte. Results are likely biased low.  |
| Q-41       | Estimated Results. Recovery of Continuing Calibration Verification sample above upper control limit for this analyte. Results are likely biased high.   |
| Q-42       | Matrix Spike and/or Duplicate analysis was performed on this sample. % Recovery or RPD for this analyte is outside laboratory control limits. (Refer to the QC Section of Analytical Report.) |
| Q-52       | Due to erratic or low blank spike recoveries, results for this analyte are considered Estimated Values.   |
| Q-54       | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +12%. The results are reported as Estimated Values.        |
| Q-54a      | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +13%. The results are reported as Estimated Values.        |
| Q-54b      | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +3.3%. The results are reported as Estimated Values.       |

Hahn and AssociatesProject:Mult 802 Decommissioning434 NW 6th Ave. Suite 203Project Number:2708-60FReport ID:Portland, OR 97209Project Manager:Rob EdeA9E0508 - 05 29 19 1543

| Q-54c | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +3.5%. The results are reported as Estimated Values. |
|-------|---|
| Q-54d | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +3.6%. The results are reported as Estimated Values. |
| Q-54e | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +42%. The results are reported as Estimated Values.  |
| Q-54f | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +6%. The results are reported as Estimated Values.   |
| Q-54g | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +8%. The results are reported as Estimated Values.   |
| Q-54h | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +9.1%. The results are reported as Estimated Values. |
| Q-54i | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -5.9%. The results are reported as Estimated Values. |
| Q-55  | Daily CCV/LCS recovery for this analyte was below the +/-20% criteria listed in EPA 8260C, however there is adequate sensitivity to ensure detection at the reporting level.            |
| Q-56  | Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260C   |
| S-01  | Surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interference.   |
| S-05  | Surrogate recovery is estimated due to sample dilution required for high analyte concentration and/or matrix interference.  |
| TCLP  | This batch QC sample was prepared with TCLP or SPLP fluid from preparation batch 9051218.   |

Apex Laboratories

Philip Nevenberg

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Hahn and Associates Project: Mult 802 Decommissioning

 434 NW 6th Ave. Suite 203
 Project Number: 2708-60F
 Report ID:

 Portland, OR 97209
 Project Manager: Rob Ede
 A9E0508 - 05 29 19 1543

#### REPORTING NOTES AND CONVENTIONS:

#### **Abbreviations:**

DET Analyte DETECTED at or above the detection or reporting limit.

ND Analyte NOT DETECTED at or above the detection or reporting limit.

NR Result Not Reported

RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

#### **Detection Limits:** Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).

If no value is listed ('----'), then the data has not been evaluated below the Reporting Limit.

#### Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

#### **Reporting Conventions:**

Basis: Results for soil samples are generally reported on a 100% dry weight basis.

The Result Basis is listed following the units as "dry", "wet", or " " (blank) designation.

"dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")

See Percent Solids section for details of dry weight analysis.

"wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.

"\_\_\_" Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

#### **QC Source:**

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

#### **Miscellaneous Notes:**

"---" QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

"\*\*\*" Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

#### Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).

- -For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
- -For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.

For further details, please request a copy of this document.

Apex Laboratories

Hahn and Associates Project: Mult 802 Decommissioning

 434 NW 6th Ave. Suite 203
 Project Number: 2708-60F
 Report ID:

 Portland, OR 97209
 Project Manager: Rob Ede
 A9E0508 - 05 29 19 1543

#### **REPORTING NOTES AND CONVENTIONS (Cont.):**

#### Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

#### **Preparation Notes:**

#### Mixed Matrix Samples:

#### Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

#### Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

#### **Sampling and Preservation Notes:**

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

#### LABORATORY ACCREDITATION INFORMATION

# TNI Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the <u>exception</u> of any analyte(s) listed below:

#### **Apex Laboratories**

Matrix Analysis TNI\_ID Analyte TNI\_ID Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

#### **Secondary Accreditations**

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

#### **Subcontract Laboratory Accreditations**

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.

Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

#### Field Testing Parameters

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

RE: A9E0677 - Mult 802 Decommissioning - 2708-60F

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A9E0677, which was received by the laboratory on 5/21/2019 at 12:09:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: <a href="mailto:pnerenberg@apex-labs.com">pnerenberg@apex-labs.com</a>, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of final reporting, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

# **QUALIFIER DEFINITIONS**

# Client Sample and Quality Control (QC) Sample Qualifier Definitions:

# **Apex Laboratories**

| ex Laborato | ories .   |
|-------------|---|
| F-13        | The chromatographic pattern does not resemble the fuel standard used for quantitation   |
| F-17        | No fuel pattern detected. The Diesel result represents carbon range C12 to C24, and the Oil result represents >C24 to C40.  |
| F-20        | Result for Diesel is Estimated due to overlap from Gasoline Range Organics or other VOCs.   |
| M-05        | Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.  |
| Q-03        | Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.   |
| Q-04        | Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.   |
| Q-05        | Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.  |
| Q-16        | Reanalysis of an original Batch QC sample.  |
| Q-17        | RPD between original and duplicate sample is outside of established control limits.   |
| Q-18        | Matrix Spike results for this extraction batch are not reported due to the high dilution necessary for analysis of the source sample.   |
| Q-29        | Recovery for Lab Control Spike (LCS) is above the upper control limit. Data may be biased high.   |
| Q-31        | Estimated Results. Recovery of Continuing Calibration Verification sample below lower control limit for this analyte. Results are likely biased low.  |
| Q-41        | Estimated Results. Recovery of Continuing Calibration Verification sample above upper control limit for this analyte. Results are likely biased high.   |
| Q-42        | Matrix Spike and/or Duplicate analysis was performed on this sample. % Recovery or RPD for this analyte is outside laboratory control limits. (Refer to the QC Section of Analytical Report.) |
| Q-52        | Due to erratic or low blank spike recoveries, results for this analyte are considered Estimated Values.   |
| Q-54        | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +1.9%. The results are reported as Estimated Values.       |
| Q-54a       | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +2.9%. The results are reported as Estimated Values.       |
| Q-54b       | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +5.1%. The results are reported as Estimated Values.       |
| Q-54c       | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by +9.2%. The results are reported as Estimated Values.       |
| Q-54d       | Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -8.5%. The results are reported as Estimated Values.       |
| Q-55        | Daily CCV/LCS recovery for this analyte was below the +/-20% criteria listed in EPA 8260C, however there is adequate sensitivity to ensure detection at the reporting level.                  |
| Q-56        | Daily CCV/LCS recovery for this analyte was above the +/-20% criteria listed in EPA 8260C   |
|             |   |

S-01 Surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interference.

S-05 Surrogate recovery is estimated due to sample dilution required for high analyte concentration and/or matrix interference.

V-15 Sample aliquot was subsampled from the sample container. The subsampled aliquot was preserved in the laboratory within 48 hours of sampling.

 A9E0677 - 05 28 19 1635

### REPORTING NOTES AND CONVENTIONS:

### **Abbreviations:**

DET Analyte DETECTED at or above the detection or reporting limit.

ND Analyte NOT DETECTED at or above the detection or reporting limit.

NR Result Not Reported

RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

### **Detection Limits:** Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).

If no value is listed ('----'), then the data has not been evaluated below the Reporting Limit.

### Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

### **Reporting Conventions:**

Basis: Results for soil samples are generally reported on a 100% dry weight basis.

The Result Basis is listed following the units as "dry", "wet", or " " (blank) designation.

"dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")

See Percent Solids section for details of dry weight analysis.

"wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.

"\_\_\_" Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

# **QC Source:**

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

### Miscellaneous Notes:

"---" QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

"\*\*\*" Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

### Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).

- -For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
- -For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.

For further details, please request a copy of this document.

Apex Laboratories

 Project Manager: Rob Ede
 A9E0677 - 05 28 19 1635

# **REPORTING NOTES AND CONVENTIONS (Cont.):**

### Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

### **Preparation Notes:**

# Mixed Matrix Samples:

### Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

### Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

### **Sampling and Preservation Notes:**

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

### LABORATORY ACCREDITATION INFORMATION

# TNI Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the <u>exception</u> of any analyte(s) listed below:

### **Apex Laboratories**

Matrix Analysis TNI\_ID Analyte TNI\_ID Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

### **Secondary Accreditations**

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

### **Subcontract Laboratory Accreditations**

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.

Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

### Field Testing Parameters

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

RE: A9E0723 - Mult 802 Decommissioning - 2708-60F

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A9E0723, which was received by the laboratory on 5/22/2019 at 12:41:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: <a href="mailto:pnerenberg@apex-labs.com">pnerenberg@apex-labs.com</a>, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of final reporting, unless prior arrangements have been made.

### ANALYTICAL CASE NARRATIVE

### Work Order: A9E0723

Preservation Nonconformance

A temperature excursion occurred during sample storage. Sample 2708-190521-009 (A9E0723-03) analyzed for EPA Method 8260 and NWTPH-Gx was stored out of EPA recommended storage temp (>6C) reaching 17C for a period of approximately 48 hours. No other analysis was affected.

Mark Zehr Organics Manager 6/5/2019

Amended Report Revision 1:

This report supersedes all previous reports.

Analyses, except for full list 8260 VOCs, were added after the previous report version had been completed.

## **QUALIFIER DEFINITIONS**

## Client Sample and Quality Control (QC) Sample Qualifier Definitions:

## **Apex Laboratories**

| ex Laborato | <u>ories</u>  |
|-------------|---|
| В           | Analyte detected in an associated blank at a level above the MRL. (See Notes and Conventions below.)  |
| B-02        | Analyte detected in an associated blank at a level between one-half the MRL and the MRL. (See Notes and Conventions below.)   |
| E           | Estimated Value. The result is above the calibration range of the instrument.   |
| E-05        | Estimated Result. Initial Calibration Verification (ICV) failed high. No affect on non-detect results.  |
| F-17        | No fuel pattern detected. The Diesel result represents carbon range C12 to C24, and the Oil result represents >C24 to C40.  |
| H-01        | This sample was analyzed outside the recommended holding time.  |
| H-08        | Sample hold time extended by freezing at -18 degrees C. Total time at 4 degrees C was less than the standard hold time.   |
| M-02        | Due to matrix interference, this analyte cannot be accurately quantified. The reported result is estimated.   |
| M-04        | Due to matrix interference, this analyte cannot be accurately quantified. The reported result may contain a high bias.  |
| M-05        | Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.  |
| Q-01        | Spike recovery and/or RPD is outside acceptance limits.   |
| Q-03        | Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.   |
| Q-04        | Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.   |
| Q-05        | Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.  |
| Q-17        | RPD between original and duplicate sample is outside of established control limits.   |
| Q-18        | Matrix Spike results for this extraction batch are not reported due to the high dilution necessary for analysis of the source sample.   |
| Q-19        | Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.   |
| Q-24        | The RPD for this spike and spike duplicate is above established control limits. Recoveries for both the spike and spike duplicate are within control limits.                                  |
| Q-29        | Recovery for Lab Control Spike (LCS) is above the upper control limit. Data may be biased high.   |
| Q-31        | Estimated Results. Recovery of Continuing Calibration Verification sample below lower control limit for this analyte. Results are likely biased low.  |
| Q-39        | Results for sample duplicate are significantly higher than the sample results. See duplicate results in QC section of the report.   |
| Q-41        | Estimated Results. Recovery of Continuing Calibration Verification sample above upper control limit for this analyte. Results are likely biased high.   |
| Q-42        | Matrix Spike and/or Duplicate analysis was performed on this sample. % Recovery or RPD for this analyte is outside laboratory control limits. (Refer to the QC Section of Analytical Report.) |
| Q-52        | Due to erratic or low blank spike recoveries, results for this analyte are considered Estimated Values.   |
|             |   |

Hahn and Associates Project: Mult 802 Decommissioning

 434 NW 6th Ave. Suite 203
 Project Number: 2708-60F
 Report ID:

 Portland, OR 97209
 Project Manager: Rob Ede
 A9E0723 - 06 24 19 1133

#### REPORTING NOTES AND CONVENTIONS:

#### **Abbreviations:**

DET Analyte DETECTED at or above the detection or reporting limit.

ND Analyte NOT DETECTED at or above the detection or reporting limit.

NR Result Not Reported

RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

#### **Detection Limits:** Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).

If no value is listed ('----'), then the data has not been evaluated below the Reporting Limit.

#### Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

#### **Reporting Conventions:**

Basis: Results for soil samples are generally reported on a 100% dry weight basis.

The Result Basis is listed following the units as "dry", "wet", or " " (blank) designation.

"dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")

See Percent Solids section for details of dry weight analysis.

"wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.

"\_\_\_" Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

### **QC Source:**

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

#### **Miscellaneous Notes:**

"---" QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

"\*\*\*" Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

#### Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).

- -For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
- -For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.

For further details, please request a copy of this document.

### **REPORTING NOTES AND CONVENTIONS (Cont.):**

#### Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

#### **Preparation Notes:**

#### Mixed Matrix Samples:

#### Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

#### Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

### **Sampling and Preservation Notes:**

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

#### LABORATORY ACCREDITATION INFORMATION

## TNI Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the <u>exception</u> of any analyte(s) listed below:

## **Apex Laboratories**

Matrix Analysis TNI\_ID Analyte TNI\_ID Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

## **Secondary Accreditations**

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

## **Subcontract Laboratory Accreditations**

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.

Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

## **Field Testing Parameters**

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.

RE: A9E0785 - Mult 802 Decommissioning - 2708-60F

Thank you for using Apex Laboratories. We greatly appreciate your business and strive to provide the highest quality services to the environmental industry.

Enclosed are the results of analyses for work order A9E0785, which was received by the laboratory on 5/23/2019 at 1:55:00PM.

If you have any questions concerning this report or the services we offer, please feel free to contact me by email at: <a href="mailto:pnerenberg@apex-labs.com">pnerenberg@apex-labs.com</a>, or by phone at 503-718-2323.

Please note: All samples will be disposed of within 30 days of final reporting, unless prior arrangements have been made.

Cooler Receipt Information

(See Cooler Receipt Form for details)

### ANALYTICAL CASE NARRATIVE

## Work Order: A9E0785

Preservation Nonconformance

A temperature excursion occurred during sample storage. Sample 2708-190522-011 (A9E0785-01) analyzed for EPA Method 8260 and NWTPH-Gx was stored out of EPA recommended storage temp (>6C) reaching 17C for a period of approximately 48 hours. No other analysis was affected.

## **QUALIFIER DEFINITIONS**

## Client Sample and Quality Control (QC) Sample Qualifier Definitions:

#### **Apex Laboratories**

| В | Analyte detected in an associated blank at a level above the MRL. (See Notes and Conventions below.) |
|---|--|
|   |  |

- E Estimated Value. The result is above the calibration range of the instrument.
- F-17 No fuel pattern detected. The Diesel result represents carbon range C12 to C24, and the Oil result represents >C24 to C40.
- M-02 Due to matrix interference, this analyte cannot be accurately quantified. The reported result is estimated.
- M-05 Estimated results. Peak separation for structural isomers is insufficient for accurate quantification.
- **Q-01** Spike recovery and/or RPD is outside acceptance limits.
- Q-03 Spike recovery and/or RPD is outside control limits due to the high concentration of analyte present in the sample.
- Q-04 Spike recovery and/or RPD is outside control limits due to a non-homogeneous sample matrix.
- Q-05 Analyses are not controlled on RPD values from sample and duplicate concentrations that are below 5 times the reporting level.
- Q-17 RPD between original and duplicate sample is outside of established control limits.
- Q-19 Blank Spike Duplicate (BSD) sample analyzed in place of Matrix Spike/Duplicate samples due to limited sample amount available for analysis.
- Q-29 Recovery for Lab Control Spike (LCS) is above the upper control limit. Data may be biased high.
- Q-42 Matrix Spike and/or Duplicate analysis was performed on this sample. % Recovery or RPD for this analyte is outside laboratory control limits. (Refer to the QC Section of Analytical Report.)
- Q-54 Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -14%. The results are reported as Estimated Values.
- Q-54a Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -2%. The results are reported as Estimated Values.
- Q-54b Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -24%. The results are reported as Estimated Values.
- Q-54c Daily Continuing Calibration Verification recovery for this analyte failed the +/-20% criteria listed in EPA method 8260C/8270D by -9%. The results are reported as Estimated Values.
- Q-55 Daily CCV/LCS recovery for this analyte was below the +/-20% criteria listed in EPA 8260C, however there is adequate sensitivity to ensure detection at the reporting level.
- R-02 The Reporting Limit for this analyte has been raised to account for interference from coeluting organic compounds present in the sample.
- S-01 Surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interference
- V-16 Sample aliquot was subsampled from the sample container in the laboratory. The subsampled aliquot was not preserved within 48 hours of sampling.
- X See Case Narrative.

#### REPORTING NOTES AND CONVENTIONS:

#### **Abbreviations:**

DET Analyte DETECTED at or above the detection or reporting limit.

ND Analyte NOT DETECTED at or above the detection or reporting limit.

NR Result Not Reported

RPD Relative Percent Difference. RPDs for Matrix Spikes and Matrix Spike Duplicates are based on concentration, not recovery.

## **Detection Limits:** Limit of Detection (LOD)

Limits of Detection (LODs) are normally set at a level of one half the validated Limit of Quantitation (LOQ).

If no value is listed ('----'), then the data has not been evaluated below the Reporting Limit.

#### Reporting Limits: Limit of Quantitation (LOQ)

Validated Limits of Quantitation (LOQs) are reported as the Reporting Limits for all analyses where the LOQ, MRL, PQL or CRL are requested. The LOQ represents a level at or above the low point of the calibration curve, that has been validated according to Apex Laboratories' comprehensive LOQ policies and procedures.

#### **Reporting Conventions:**

Basis: Results for soil samples are generally reported on a 100% dry weight basis.

The Result Basis is listed following the units as "dry", "wet", or " " (blank) designation.

"dry" Sample results and Reporting Limits are reported on a dry weight basis. (i.e. "ug/kg dry")

See Percent Solids section for details of dry weight analysis.

"wet" Sample results and Reporting Limits for this analysis are normally dry weight corrected, but have not been modified in this case.

"\_\_\_" Results without 'wet' or 'dry' designation are not normally dry weight corrected. These results are considered 'As Received'.

## **QC Source:**

In cases where there is insufficient sample provided for Sample Duplicates and/or Matrix Spikes, a Lab Control Sample Duplicate (LCS Dup) may be analyzed to demonstrate accuracy and precision of the extraction batch.

Non-Client Batch QC Samples (Duplicates and Matrix Spike/Duplicates) may not be included in this report. Please request a Full QC report if this data is required.

#### Miscellaneous Notes:

"---" QC results are not applicable. For example, % Recoveries for Blanks and Duplicates, % RPD for Blanks, Blank Spikes and Matrix Spikes, etc.

"\*\*\*" Used to indicate a possible discrepancy with the Sample and Sample Duplicate results when the %RPD is not available. In this case, either the Sample or the Sample Duplicate has a reportable result for this analyte, while the other is Non Detect (ND).

#### Blanks:

Standard practice is to evaluate the results from Blank QC Samples down to a level equal to ½ the Reporting Limit (RL).

- -For Blank hits falling between ½ the RL and the RL (J flagged hits), the associated sample and QC data will receive a 'B-02' qualifier.
- -For Blank hits above the RL, the associated sample and QC data will receive a 'B' qualifier, per Apex Laboratories' Blank Policy.

For further details, please request a copy of this document.

 A9E0785 - 06 19 19 1644

## **REPORTING NOTES AND CONVENTIONS (Cont.):**

#### Blanks (Cont.):

Sample results flagged with a 'B' or 'B-02' qualifier are potentially biased high if the sample results are less than ten times the level found in the blank for inorganic analyses, or less than five times the level found in the blank for organic analyses.

'B' and 'B-02' qualifications are only applied to sample results detected above the Reporting Level.

#### **Preparation Notes:**

## Mixed Matrix Samples:

#### Water Samples:

Water samples containing significant amounts of sediment are decanted or separated prior to extraction, and only the water portion analyzed, unless otherwise directed by the client.

## Soil and Sediment Samples:

Soil and Sediment samples containing significant amounts of water are decanted prior to extraction, and only the solid portion analyzed, unless otherwise directed by the client.

## **Sampling and Preservation Notes:**

Certain regulatory programs, such as National Pollutant Discharge Elimination System (NPDES), require that activities such as sample filtration (for dissolved metals, orthophosphate, hexavalent chromium, etc.) and testing of short hold analytes (pH, Dissolved Oxygen, etc.) be performed in the field (on-site) within a short time window. In addition, sample matrix spikes are required for some analyses, and sufficient volume must be provided, and billable site specific QC requested, if this is required. All regulatory permits should be reviewed to ensure that these requirements are being met.

Data users should be aware of which regulations pertain to the samples they submit for testing. If related sample collection activities are not approved for a particular regulatory program, results should be considered estimates. Apex Laboratories will qualify these analytes according to the most stringent requirements, however results for samples that are for non-regulatory purposes may be acceptable.

Samples that have been filtered and preserved at Apex Laboratories per client request are listed in the preparation section of the report with the date and time of filtration listed.

Apex Laboratories maintains detailed records on sample receipt, including client label verification, cooler temperature, sample preservation, hold time compliance and field filtration. Data is qualified as necessary, and the lack of qualification indicates compliance with required parameters.

#### LABORATORY ACCREDITATION INFORMATION

## TNI Certification ID: OR100062 (Primary Accreditation) - EPA ID: OR01039

All methods and analytes reported from work performed at Apex Laboratories are included on Apex Laboratories' ORELAP Scope of Certification, with the <u>exception</u> of any analyte(s) listed below:

## **Apex Laboratories**

Matrix Analysis TNI\_ID Analyte TNI\_ID Accreditation

All reported analytes are included in Apex Laboratories' current ORELAP scope.

## **Secondary Accreditations**

Apex Laboratories also maintains reciprocal accreditation with non-TNI states (Washington DOE), as well as other state specific accreditations not listed here.

## **Subcontract Laboratory Accreditations**

Subcontracted data falls outside of Apex Laboratories' Scope of Accreditation.

Please see the Subcontract Laboratory report for full details, or contact your Project Manager for more information.

## **Field Testing Parameters**

Results for Field Tested data are provded by the client or sampler, and fall outside of Apex Laboratories' Scope of Accreditation.
