Doc# UE-210795

First, please excuse any typos – I am vision impaired but do with to submit something on this subject.

1) I do not feel that trying to 30 is advisable. Yes, on certain things but not as you have submitted. Also –

2) Even to say 2025 is only two years and very quick to do away – or mostly do away with coal.

3) Coal is a standard in our society. For many things coal is. Even if our homes are of coal fired power – I can not believe they will all be solar.. in the future maybe but not real soon.

4) Batteries too many a problem. And how are they made and with what! Important to answer these 4 questions

5) and the wind mills – have you seen the HUGE e.g of them in Oregon! Too many a problem. Also.

Many People believe electric CARS ARE GREAT BUT THE COAL GENERATES THE POWER FOR MANY THINGS. And batteries can be a problem.

So please curtail the amount of change you are doing and so soon.

Thank you - , Bonnie Sunkel 3616 ^{Dani} Da Rd NW PO Box 854, Silverdale, Ws. 98383 ps. I am a long time homeowner

P.S. We can not take any more increases in our bills!
