

For the 2021 Draft CEIP, PSE is providing a Microsoft Excel file containing cost data summarized in a single file instead of data tables directly in the draft CEIP report. The direct access to the data provides a usable file for stakeholders as opposed to static tables in a PDF format.

The cost spreadsheet gives an overview of all the components used to calculate the incremental cost calculation. This file contains an “Outline and Notes” tab with specific details related to the data contained in that file.
