Subject: Draft Mitigation review

Hello all,

Thank you for your contributions so far in reviewing the Columbia Solar application materials. EFSEC and our consultant have completed our review of the updated information received from the applicant, and have drafted mitigation measures we believe would be appropriate to impose on the proposed facilities in an MDNS. We would like your help in reviewing the drafted mitigation measures, and will also be approaching the Agency SEPA contacts for formal consultation, per WAC 197-11-335 and 197-11-550. The updated SEPA checklist and mitigation measures are attached here, and the updated application materials may be found on EFSEC's website.

Feel free to get in touch with Sonia or myself regarding any questions on the application materials, checklist, or mitigation measures. Please send all comments on the mitigation measures by COB February 12.

Link to application materials on EFSEC Website:
